Carbonyltetrakis(trifluorophosphine)ruthenium(0)

[36542-23-1]

$Ru(CO)(PF_3)_4$

M 480.9
May be a fluxional isomeric mixt. Isol. from the autoclave reaction of CO, PF_3 + $Ru_3(CO)_{12}$ at 150°. Yellow liq. ν_{CO} 2070, 2026 cm^{-1}.

Udovich, C.A. *et al*, *J. Organomet. Chem.*, 1972, **36**, 355 (*synth, nmr, ms*)

[CFe]

Iron carbides IC-002443

Iron carbides are of primary importance in Steel industry, particularly Fe_3C.

***Iron carbide* (Fe_3C)** [12011-67-5]
CFe_3 M 179.5
At low concentrations of C, steel comprises phases composed of Fe + Fe_3C. Dark grey air-sensitive powder. Mp 1250°.

Hexagonal-form: [12169-32-3]. ***Cementite***
CFe_3 M 179.5
Constituent of steel. Grey, cubic; pleated hexagonal array of Fe atoms; C in distorted trigonal prismatic sites. Mp 1837°. Dec. by dil. acid to form hydrocarbons. Curie point 210-215°; hard and brittle.

Mineral-form: [61027-57-4]. ***Cohenite***
CFe_3 M 179.5
Mineral, found in meteorites, volcanic rocks.

Solid soln.: [12244-31-4]. ***Austenite***
Formed >906° in smelting process; obt. by rapid quenching. Component of steel. Solid soln. of C in γ—Fe; C atoms arranged at random and in octahedral sites; (γ—Fe is fcc). Non-magnetic; adding Mn and Ni allows formation at lower temps. than when pure.

Solid soln.: [12173-93-2]. ***Martensite***
Obt. by quenching austenite below 150°. V. hard brittle steel (a characteristic property of quenched steels). Main use as a constit. of hardened carbon steel tools. A supersaturated solid soln. of C in α—Fe (bcc). Contains ≤1.6% C.

Solid soln.: [53469-19-5]. ***Sorbite*, 9Cl**
Formed by tempering martensite. Tougher steel than one formed by quenching. A mixt. of cementite (Fe_3C) and ferrite.

Solid soln.: [12427-27-9]. ***Pearlite***
From slow cooling (to 609°) of austenite. Eutectoid mixt. of cementite (Fe_3C) and ferrite; fine grain, soft steel.

Solid soln.: [12427-24-6]. ***Ferrite***
Occurs in steels, cast-iron, pig-iron. Almost pure α—Fe (bcc) with ≃0.06% C in solid soln.

***Iron carbide* (Fe_5C_2)** [12127-45-6]
C_2Fe_5 M 303.2
Originally formulated as Fe_2C. Struct. similar to cementite but with double layers of trigonal prismatic units; C is sited in prism. Curie point 248°.

***Iron carbide* (Fe_7C_3)** [12075-42-2]
C_3Fe_7 M 426.9
Curie point 250°.

***Iron carbide* (Fe_2C)** [12011-66-4]
ε-Fe_2C
CFe_2 M 123.7
Iron atoms are hcp.

[12173-11-4]

IC-002444

$CFeO_3$

Iron(*II*) carbonate ($FeCO_3$)

[563-71-3]

$FeCO_3$

M 115.8
Formed as white ppt. when Fe(*II*) solns. treated with alkali metal carbonate. Precursor for Fe(*II*) complexes and in diamond synth. Grey solid, dec. yielding CO_2 + FeO at 200°. Insol. H_2O, sol. acids to give CO_2; sol. H_2O saturated with CO_2 to give $Fe(HCO_3)_2$ which then oxidises.

Mineral-form
Siderite. *Chalybite. Spathic iron ore*
Ore widespread; may occur with some Ca, Mg or Mn. Yellow-brown to dark brown, or grey rhombohedral cryst. Dec. on heating.

Hydrate: Sl. sol. H_2O. Dec. on heating.

Gmelin Handbook Inorg. Chem., Syst. No. 59, 1929, **B2**, 502 (*bibl*)

$CHCl_2OPd^{\ominus}$ IC-002459

(Carbonyl)dichlorohydropalladate(1−)
Dichloro(carbonyl)palladate(1−) hydride. Hydridocarbonyldichloropalladate(1−)

$[PdCl_2H(CO)]^{\ominus}$

M 206.3 (ion)
Catalyses synth. of long-chained nitro compds.
Pyridinium salt: [25792-40-9].
$C_6H_7Cl_2NOPd$ M 286.4
Yellow solid, air-sensitive.
Quinolinium salt: [25870-10-4].
$C_{10}H_9Cl_2NOPd$ M 336.5
Yellow-green solid, air-sensitive.
Ph_4As salt: [25792-41-0].
Brown solid.

Kingston, J.V. *et al*, *J. Chem. Soc., Chem. Commun.*, 1969, 455 (*synth, ir*)

$CHCl_2O_3Ta$ IC-002460

Dichloro(formato-*O,O'*)oxotantalum(*V*), 11CI
[88442-59-5]

$[TaOCl_2(OOCH)]_n$

M 312.8
Polymeric struct. of unknown geometry. Synth. by adding 2 mol. HCOOH to 1 mol. $TaCl_5$ in C_6H_6. White solid.

Viard, B. *et al*, *J. Chem. Res. (S)*, 1983, 252 (*synth, ir*)

$CHCl_3$ IC-002461

Chloroform
Trichloromethane, 9CI. R20
[67-66-3]

$CHCl_3$

M 119.3
Manuf. by direct chlorination of CH_4 or by reacn. of EtOH or Me_2CO with Cl_2 + NaOH. Solvent, intermediate for manuf. of $CHClF_2$, plastics intermediate. U.S. prodn. 136 000 t/a in 1976. Formerly used as anaesthetic. Used in the detection of phenols. Liq. Spar. sol. H_2O. d_4^{25} 1.481. Mp −63.2°. Bp 61.3°. n_D^{20} 1.4467. Nonflammable. Slowly dec. in air and light forming *inter alia* $COCl_2$ (toxic). Forms hydrate with $18H_2O$, dec. at 1.6°. Forms azeotrope contg. 2.5% H_2O, Bp 56°.

▷ Toxic vapour, OES 50 mg m^{-3}, eye irritant, suspected carcinogen. Vigorous reaction with Me_2CO and base, explosive reaction with some materials. FS9100000.

IC-002482

$CHCl_4NNb$

Pentachloro(hydrocyanic acid)niobium(*V*), 9Cl
Pentachloro(hydrogen cyanide)niobium(V).
Pentachloro(formonitrile)niobium(V)
[36349-63-4]

$(HCN)NbCl_5$

M 297.1
Octahedral; the N—C bond is shorter than that in free HCN. Synth. by dissolving freshly sublimed $NbCl_5$ in anhydrous HCN at 50°. Colourless, air- and heat-sensitive solid.
▷ Cyanides are toxic.
Clarani, C. et al, Acta Crystallogr., Sect. B, 1975, 31, 1823 (synth, cryst struct)

IC-002483

$CHCsO_3$

Caesium hydrogen carbonate ($CsHCO_3$)
Caesium bicarbonate. Carbonic acid, monocaesium salt, 8Cl.
Caesium carbonate (1:1)
[29703-01-3]

$CsHCO_3$

M 193.9
Prepd. by treatment of aq. Cs_2CO_3 with CO_2.
Commercially available. Colourless monoclinic cryst; dec. at 175° with H_2O and CO_2 loss. V. sol. H_2O (209 g per 100 cm^3 at 15°). Sol. EtOH. ΔH_f° −966 kJ mol^{-1}; ΔG_f° −832 kJ mol^{-1}; S° 130 J K^{-1} mol^{-1}.

CHF_2N

Carbonimidic difluoride, 9Cl IC-002485
Difluoromethanimine
[2712-98-3]

$F_2C{=}NH$

M 65.0
Reported syntheses prior to 1988 were erroneous. Synth. from F_3CNH_2 in Et_3N at −78° or from F_3CNCO + H_2O/Et_3N. Gas. Mp −90 to −89°. Stable < −13° or at < 5mm pressure. Dec. to CF_3NH_2 + FCN.
Bürger, H. *et al*, *J. Chem. Soc., Chem. Commun.*, 1988, 105 (*synth, F-19 nmr, ir, raman*)

CHF_3

Trifluoromethane, 9Cl, 8Cl IC-002488
Fluoroform. Fluorocarbon 23. Carbon trifluoride
[75-46-7]

CHF_3

M 70.0
Refrigerant for low temps., intermed. for org. synth. Odourless gas. Sol. H_2O. d^{-100} 1.52. Mp −163°. Bp −82.1°. Bp 20° at 40 atm.
▷ Low toxicity, narcotic in high concentration. PB6900000.
Henne, A.L., *J. Am. Chem. Soc.*, 1937, **59**, 1200 (*synth*)

CHF_3OS

IC-002487

Trifluoromethanesulfenic acid, 9Cl
[306-79-6]

F_3CSOH

M 118.0
Me ester: [1544-50-9]. *Methyl trifluoromethanesulfenate*
$C_2H_3F_3OS$ M 132.1
Liq. Bp 25-26°.
Et ester: [691-04-3]. *Ethyl trifluoromethanesulfenate*
$C_3H_5F_3OS$ M 146.1
Liq. Bp 47-49°.
2,2,2-Trifluoroethyl ester: Liq. Bp 44-50°.
Isopropyl ester
$C_4H_7F_3OS$ M 160.1
Liq. Bp 68-70°.
Hasszeldine, R.N. *et al*, *J. Chem. Soc.*, 1955, 2901.

CHF_3O_3S

IC-002488

Trifluoromethanesulfonic acid, 11Cl, 9Cl
Triflic acid
[1493-13-6]

F_3CSO_3H

M 150.0
Catalyst for isomerisations, alkylations etc. Liq. Misc. H_2O. d_4^{20} 1.69. Bp 162°. Fumes in moist air; very hygroscopic, forming monohydrate, Mp 34°. Very strong acid.
Na salt: [2926-30-9].
Solid. Mp 251°.
Me ester: [333-27-7].
$C_2H_3F_3O_3S$ M 164.1
Important reagent for methylations. d_4^{20} 1.45. Bp 99°.
▷ Corrosive, severe poison.
Et ester: [425-75-2].
$C_3H_5F_3O_3S$ M 178.1
Bp 115°.
Trifluoromethyl ester: [3582-05-6]. *Trifluoromethyl trifluoromethanesulfonate*
$C_2F_6O_3S$ M 218.0
Trifluoromethylating agent. Liq.
Trimethylsilyl ester: see *Trimethylsilyl trifluoromethanesulfonate, IC-004115*
Fluoride: [335-05-7].
CF_4O_2S M 152.0
Gas. Bp −21.7°. Hydrol. by H_2O only v. slowly at r.t., slowly at 100°.
Chloride: [421-83-0].
$CClF_3O_2S$ M 168.5
Bp 31.6°.
Anhydride: [358-23-6].
$C_2F_6O_5S_2$ M 282.1
Reagent for synth. of triflates and dehydration of aldoximes. Bp 84°.
Amide: [421-85-2].
$CH_2F_3NO_2S$ M 149.0
Mp 117-118°.
Diethylamide: [28048-17-1].
$C_5H_{10}F_3NO_2S$ M 177.1
Bp, 55°.

HC≡N$^{\oplus}$—O$^{\ominus}$ ($C_{\infty v}$)

M 43.0
Has the struct. shown rather than C$^{\ominus}$≡N$^{\oplus}$OH which was prev. postulated. Interatomic distances H—C 102.7, C—N 116.8, N—O 119.9 pm. The free acid is stable for a time only in Et_2O soln. at low temps.; it polymerises rapidly. Metal salts are widely used in detonators.
▷ Salts highly explosive, shock-sensitive, Hg salt is highly toxic. LS9320000.
Trimolecular Me ester:
C_3H_3NO M 57.0
Needles (H_2O). Mp 149°.
Deutero compd: [20411-64-7]. *Fulminic acid*-d.
Deuterofulminic acid
CDNO M 44.0
Synth. from HCNO + D_2O in vapour phase or Hg fulminate + D_2O + Na/Hg.

CHNO

IC-002476

Isocyanic acid, 8Cl
[75-13-8]

HN=C=O

M 43.0
Contrary to popular belief, is not in equilib. with Cyanic acid, IC-002474. Freq. confused with cyanic acid in 9CI. Interatomic distances: H—N 98.6, N—C 120.9, C—O 116.6 pm; angle HNC 128°. Formed by thermal dec. of trimer $(HNCO)_3$. Reagent for conversion of alcohols to allophanates. Also adds to carbonyl compds. and alkenes. Liq. or gas with strongly acrid odour. d^0 1.140. Mp −86°. Bp 23.5°. pK_a 3.66.
▷ Lachrymator, vesicant, highly toxic.
Deutero derin.: [10357-59-2]. *Isocyanic acid*-d. *Deutero isocyanic acid*
CDNO M 44.0
Formed by photolysis of CD_3NO_2 or cyanuric acid + D_2O followed by pyrolysis. Identified in Ar matrix.

Chloroiodomethane
[593-71-5]

$ClCH_2I$

M 176.3
Versatile organic synthon. Commercially available. Liq. Bp 108-109° (104-105°).

Miyano, S. *et al*, *Bull. Chem. Soc. Jpn.*, 1971, **44**, 2864 (*synth, pmr*)
Hahn, R.C., *J. Org. Chem.*, 1988, **53**, 1331 (*synth, bibl, use*)

IC-002497

CH_2Cl_2

Dichloromethane, 9CI
Methylene chloride. Methane dichloride. R 30
[75-09-2]

CH_2Cl_2

M 84.9
Manuf. by chlorination of chloromethane. Widely used solv. used in coffee decaffeination. Component of paint removers. Blowing agent in foams. Volatile liq. d_4^{15} 1.335. Fp −96.8°. Bp 40.1°.

▷ Mod. toxic, eye irritant. OES 350 mg m^{-3}. Exp. carcinogen at high dose level. Gives explosive mixts. with various materials. Vapour can ignite or explode if heated. Dec. to toxic $COCl_2$ if strongly heated in air. PA8050000.

IC-002498

CH_2Cl_2S

Chloromethylsulfenyl chloride
[26826-80-2]

$ClCH_2SCl$

M 116.9
Synth. from Me_2S_2 + Cl_2 at −20°. Orange liq., slowly dec. in H_2O; stable in dry air. Sol. $CHCl_3$, C_6H_6. Bp_{40} 50°.

Brintzinger, H. *et al*, *Chem. Ber.*, 1950, **83**, 87 (*synth*)

IC-002499

$CH_2Cl_3OPt^{\ominus}$

Carbonyltrichlorodihydroplatinate(*IV*)(1−), 9CI
[42562-39-0]

$[Pt(CO)H_2Cl_3]^{\ominus}$

M 331.4 (ion)
Struct. not determined. May be identical to Carbonyltrichloroplatinate(*II*)(1−), IC-002364. Synth. from $Pt(CO)_2$ + HCl aq. + $Fe^{3\oplus}$.

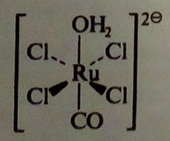
Et_4N salt: [32679-18-8].
Air-stable pale yellow solid. Sol. $CHCl_3$, EtOH, Me_2CO.

Rachovskaya, L.N. *et al*, *Russ. J. Inorg. Chem.* (*Engl. Transl.*), 1972, **17**, 1173 (*synth, ir*)

IC-002500

$CH_2Cl_4O_2Ru^{2\ominus}$

Aquacarbonyltetrachlororuthenate(2−)



M 288.9 (ion)
Prepd. by reducing $RuCl_3.xH_2O$ with boiling HCOOH/aq. HCl. Sol. H_2O, aq. HCl (green soln.). Ir ν_{CO} 1950 cm^{-1} (aq. HCl).

Di-NH_4 salt: [14912-60-8].
Pale-green cryst. Ir ν_{CO} 1950 cm^{-1} (KBr).

Di-Cs salt: [17568-72-8].
Air-stable green solid. Dec. at ca. 250°. Ir ν_{CO} 1951; ν_{RuCl} 311, 289 cm^{-1} (nujol).

$[CH_2O_6P_2Tc^{4\ominus}]$ IC-002517

Methylenediphosphonate technetium complex

Medronate-Tc. MDP-Tc. Technetium-MDP. Osteolite. Macrotec

[101488-09-9]

$[O_3PCH_2PO_3]^{4\ominus}$ + Tc

Ill-defined methylenediphosphonate (MDP) complexes of technetium(*III*),(*IV*), and (*V*) are prepared by reduction of $TcO_4^\ominus$. They may be oligomeric - their nature and ratio depends on method of preparation. There is a well-defined hydroxo-derivative ($CH_3O_7P_2Tc^\ominus$) and a nitrido-technetium(*VI*) species. Synth. by electrochemical, $S_2O_4^{2\ominus}$, $BH_4^\ominus$, or Sn(*II*) reduction of $TcO_4^\ominus$. Tc(*IV*) species are synth. by reaction of $TcBr_6^{2\ominus}$ with MDP. Amongst the most widely used Tc compds, mainly for bone imaging but also for imaging the spleen, brain, and kidneys, and for labelling red blood cells.

IC-002540

CH_3BrS

Methanesulfenyl bromide

Thiohypobromous acid methyl ester. Methyl thiohypobromite

[18681-32-2]

MeSBr

M 127.0

Formed from MeSH + Br_2 at −80° or from Me_2S_2 + Br_2 in CH_2Cl_2. Unstable, not isol. in pure state. Sol. CH_2Cl_2.

Helmkamp, G.K. *et al*, *J. Am. Chem. Soc.*, 1958, **80**, 1633 (*synth in soln, conductivity, reactions*)
Nagy-Felsobuki, E. *et al*, *Phosphorus Sulfur*, 1979, **7**, 137 (*synth, pe*)

IC-002541

CH_3BrSe

Methaneselenenyl bromide

Selenohypobromous acid methyl ester. Methyl selenohypobromite

[73501-41-4]

MeSeBr

M 173.8

Formed from Me_2Se_2 + Br_2 in CH_2Cl_2 at −10°. Black-red soln. in CH_2Cl_2.

Denis, J.N. *et al*, *Tetrahedron Lett.*, 1979, **29**, 2697 (*synth, nmr*)

IC-002542

CH_3Br_2Te

Tribromomethyltellurium

Methyltellurium tribromide

[20350-53-2]

$MeTeBr_3$

M 382.3

Obt. as mixt. with Me_2TeBr_2. Formed from $TeBr_4$ + $SnMe_4$. Sol. C_6H_6, toluene.

Schumann, H. *et al*, *J. Organomet. Chem.*, 1982, **232**, 147 (*synth, Te-125 nmr*)

IC-002543

CH_3Cl

Chloromethane, 9CI

Methyl chloride

[74-87-3]

H_3CCl

M 50.4

Manuf. by chlorination of methane or by action of HCl on MeOH. Refrigerant. Methylating reagent used in manuf. of silicones and $PbMe_4$, low-temp. solv., extractant. Gas with ethereal odour. Mod. sol. H_2O. Mp −97.7°. Bp −23.7°.

▷ Toxic by inhalation, OES 105 mg m^{-3}. Extremely flammable, flash p. <0°. Ignites or explodes on contact with BrF_3, BrF_5 and some metals. PA6300000.

IC-002550

CH_3ClO_2S

Methyl chlorosulfate

Chlorosulfuric acid methyl ester

[812-01-1]

$MeOSO_2Cl$

M 130.5

Formed from SO_2Cl_2 + MeOH. Colourless liq., readily hydrol. Misc. many org. solvs. d^{20} 1.48. Bp_{16} 55-56°.

Binkley, W.W., *J. Am. Chem. Soc.*, 1938, **60**, 2810 (*synth*)
Cox, C.P., *J. Chem. Eng. Data*, 1983, **28**, 134 (*synth, reactions*)

IC-002551

CH_3ClO_4

Methyl perchlorate

Perchloric acid methyl ester

[17043-56-0]

$MeOClO_3$

M 114.4

Not isol. Formed from $AgClO_4$ + MeI in C_6H_6. Used as a soln. in org. solvs. Sol. hexane, dioxan, C_6H_6.

▷ Highly explosive. Heat-, shock- and friction-sensitive.

Kevill, D.N. *et al, Tetrahedron Lett.*, 1976, **52**, 4811 (*synth, reactions*)
Raynor, P.N.G., *Chem. Ber.*, 1977, **13**, 396 (*haz*)
Fieser and Fieser's Reagents for Organic Synthesis, Wiley, 1980, **8**, 340 (*use*)
Kevill, D.N. *et al, J. Chem. Soc., Perkin Trans. 2*, 1981, 49 (*synth, reactions*)

IC-002552

CH_3ClSe

Methaneselenenyl chloride
Selenohypochlorous acid methyl ester. Methyl selenohypochlorite
[51384-82-8]

MeSeCl

M 129.4
Synth. from Me_2Se_2 + SO_2Cl_2 in CH_2Cl_2 at 0°. Colourless liq.

Koshutin, V.I. *et al, J. Gen. Chem. USSR (Engl. Transl.)*, 1973, **43**, 2212 (*synth, reactions*)

IC-002553

$CH_3Cl_4ORe^{1\ominus}$

Pentachloro(methoxy)rhenate(*IV*)(2−)

$[ReCl_5(OMe)]^{2\ominus}$

M 394.5 (ion)
Di-Cs salt: [20554-66-9].
Synth. from $ReCl_4(MeCN)_2$, HCl in MeOH and CsCl. Cream-yellow cryst.

Rouschias, G. *et al, J. Chem. Soc. A*, 1968, 489 (*synth, ir, props*)

IC-002554

$CH_3Cl_5OTi^{2\ominus}$

Pentachloromethoxytitanate(*IV*)(2−), 11Cl

$[Ti(OMe)Cl_5]^{2\ominus}$

M 256.1 (ion)
Bis(ethyl acetate-O)Mg salt: [93855-78-8].
$C_9H_{19}Cl_5MgO_4Ti$ M 456.6
Synth. from $TiCl_4$ + $MgCl_2$ + MeOH in EtOAc soln. Olefin polym. catalyst.
Bis(pyridinium) salt: [40583-42-4].
Synth. from Ti(acac)Cl_3 with Py and MeOH in CH_2Cl_2 soln. Yellow solid. Mp 175° dec.

Thompson, D. *et al, Inorg. Chem.*, 1973, **12**, 2190 (*synth, ir, pmr, pyridinium salt*)
Albizzati, E. *et al, Makromol. Chem. Rapid Commun.*, 1984, **5**, 673 (*synth, use, Mg salt*)

IC-002555

$CH_3CuN_3O_8$

Dinitrato(nitromethane)copper(*II*)
Copper(II) *nitrate nitromethane complex (1:1)*

$Cu(NO_3)_2(MeNO_2)$

M 248.5
Each Cu has tetragonal pyramidal coordination with square bases linked diagonally, through bridging nitrato groups. Unidentate nitromethane apical with Cu—O 231 pm, cf. Cu—O (nitrate) 195 pm. Blue-green cryst. $(MeNO_2)$.

Logan, N. *et al, Spectrochim. Acta*, 1965, **21**, 857 (*ir*)
Duffin, B. *et al, Acta Crystallogr.*, 1966, **20**, 210 (*synth, cryst struct*)

CH_3F

Fluoromethane, 9Cl IC-002556
Methyl fluoride. Fluorocarbon 41
[593-53-3]

H_3CF

M 34.0
Gas. Mod. sol. H_2O; sol. EtOH, Et_2O. Mp −141.8°. Bp −78.2°. Crit. point 44.9°/58 atm.
▷ Flammable, narcotic in high concentrations. PA9154000.

Cawood, W. *et al, J. Chem. Soc.*, 1932, 2180 (*synth*)
Swarts, F., *Bull. Soc. Chim. Belg.*, 1937, **46**, 10 (*synth*)
Sax, N.I. *et al, Dangerous Properties of Industrial Materials*, 7th Ed., Van Nostrand-Reinhold, 1989, 1750.

CH_3FO_2S

Methanesulfonyl fluoride, 9Cl, 8Cl IC-002557
Mesyl fluoride

$MeSO_2F$

M 98.0
Interatomic distances: S—O 141, S—F 156.1, C—S 175.9 pm. Synth. from $MeSO_2OH$ + HF. Synthetic intermed., commercially available. Colourless liq. d_4^{20} 1.35. Bp 123.124°, Bp_{40} 80°, Bp_{25} 35°.
▷ Corrosive.

Ham, N.S. *et al, Aust. J. Chem.*, 1953, **6**, 33 (*synth, ir, bibl*)
Gramstad, T. *et al, J. Chem. Soc.*, 1956, 173 (*synth, ir*)

CH_3FO_3S

Methyl fluorosulfate IC-002558
Methyl fluorosulfonate. Fluorosulfuric acid methyl ester. Methyl fluorsulfonate. Magic methyl
[421-20-5]

$MeOS(O)_2F$

M 114.0
Synth. from FSO_3H + CH_2N_2 in SO_2ClF at 85° or from FSO_3H + $(MeO)_2SO_2$. Commercially available methylating agent. Good solvent. Volatile colourless liq. Rapidly hydrol. Ethereal odour. Sol. most org. solvs. d 1.41. Mp −95°. Bp 92-94°. n_D^{20} 1.3326.
▷ Extremely toxic to humans. Exposure can be fatal. Skin, eye and mucous membrane irritant. Reacts with H_2O, steam or acid to give corrosive and toxic fumes. LP0720000.

Meyer, J. *et al, Z. Anorg. Allg. Chem.*, 1932, **206**, 24 (*synth*)
Fieser and Fieser's Reagents for Organic Synthesis, Wiley, 1972, **3**, 202; 1974, **4**, 339; 1975, **5**, 445; 1977, **6**, 381; 1979, **7**, 240; 1980, **8**, 340; 1981, **9**, 307.

Sax, N.I. *et al, Dangerous Properties of Industrial Materials*, 7th Ed., Van Nostrand-Reinhold, 1989, 2316 (*haz*)

$CH_3F_2IO_2$

Difluoromethoxyoxoiodine, 11Cl IC-002559
[89706-06-9]

$MeOI(O)F_2$

M 211.9
Formed from IF_5 + $(MeO)_4Si$ in SO_2. Colourless cryst. Mp 52-53° dec.

Frohn, H.J. *et al, J. Fluorine Chem.*, 1984, **24**, 219 (*synth, F-19 nmr*)

IC-002560

$CH_3F_2S^{\oplus}$

Difluoro(methyl)sulfonium

$[MeSF_2]^{\oplus}$

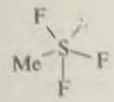
M 85.0 (ion)
Trigonal pyramidal struct. with C_s symmetry. Synth. from $MeSF_3$ + Lewis Acid.
Tetrafluoroborate:
CH_3BF_6S M 171.9
Synth. from $MeSF_3$ + BF_3 in e.g. $CHCl_3$. White solid. Stable under rigorously dry conditions. Sol. HF.
Hexafluoroarsenate:
CH_3AsF_6S M 274.0
Synth. from $MeSF_3$ + AsF_5 in e.g. $CHCl_3$. White solid. Stable under rigorously dry conditions. Sol. HF.

Downs, A.J. *et al, J. Chem. Soc., Dalton Trans.*, 1991, 81 (*synth, ir, raman, pmr, F-19 nmr*)

IC-002561

CH_3F_3S

Methylsulfur trifluoride
Trifluoro(methyl)sulfur
[65082-47-5]



M 104.0
C_s symmetry. Synth. from MeSCl and AgF_2. Unstable at r.t.; can be stored in PTFE at 77K. Reacts with glass, H_2O and air. Sol. CCl_3F (10 g per 100 cm^3 at −23°). Mp −78° → −74°. Bp 80-100°.

BF_3 complex: see *Difluoro(methyl)sulfonium, IC-002560*
Downs, A.J. *et al, Inorg. Chem.*, 1989, **28**, 3286 (*ed*)
Downs, A.J. *et al, J. Chem. Soc., Dalton Trans.*, 1991, 81 (*synth, nmr, ir, raman, reactions*)

IC-002562

CH_3F_3SSi

Silyl trifluoromethyl sulfide
[(*Trifluoromethyl*)*thio*]*silane, 9Cl*
[753-94-6]

H_3SiSCF_3

M 132.1
Synth. from SiH_3I + $Hg(SCF_3)_2$. Gas or liq. Stable when pure at r.t. but dec. in the presence of impurity. Mp −127°. Bp 13.6°.

Downs, A.J. *et al, J. Chem. Soc.*, 1960, 3516 (*synth, ir, nmr*)
Haas, A. *et al, Z. Anorg. Allg. Chem.*, 1978, **447**, 119 (*synth, ir, ms, Si-29 nmr*)

IC-002563

CH_3F_3SeSi

Silyl trifluoromethyl selenide
[(*Trifluoromethyl*)*seleno*]*silane, 9Cl*
[753-96-8]

$H_3SiSeCF_3$

M 179.0
Synth. from SiH_3I + $Hg(SeCF_3)_2$. Liq. Mp −125.8° Bp 35°.

Ebsworth, E.A.V. *et al, J. Chem. Soc.*, 1962, 2290 (*synth, ir, pmr*)
Haas, A. *et al, Z. Anorg. Allg. Chem.*, 1978, **447**, 119 (*synth, ir, ms, Si-29 nmr*)

IC-002564

CH_3F_4IO

Tetrafluoromethoxyiodine
Iodine tetrafluoride methoxide
[38590-00-0]

$MeOIF_4$

M 233.9
Synth. from IF_5 + $(MeO)_4Si$ in SO_2. White solid, readily hydrol. Sol. SO_2, MeCN. Mp 33-34°. Dec. at 80°

Frohn, H.J. *et al, J. Fluorine Chem.*, 1984, **24**, 219 (*synth, F-19 nmr*)

IC-002565

CH_3F_5S

Pentafluoromethylsulfur(*VI*)
[753-79-7]

$MeSF_5$

M 142.0
Formed from $CH_2{=}SF_4$ + HF at −78°. Colourless low-boiling liq., v. inert to LiR or conc. $OH^{\ominus}$. Attacked by Lewis acids. Bp 26°

Kleemann, G. *et al, Angew. Chem., Int. Ed. Engl.*, 1981, **20**, 1037 (*synth, pmr, F-19 nmr*)

IC-002566

$CH_3F_6NOS_2$

Pentafluoro(methylamidosulfurous fluoridato-*N*)sulfur, 10Cl
[84161-13-7]

$FS(OMe){=}NSF_5$

M 223.1
Synth. from $F_3SN{=}SF_2$ + NaOMe. Colourless liq., stable to disproportionation. Vp < 1 mm/25°.

Thrasher, J.S. *et al, J. Fluorine Chem.*, 1981, **18**, 537 (*synth, ms, pmr, F-19 nmr*)

IC-002567

CH_3FeO_2

Iron(*III*) methoxide oxide (Fe(OMe)O)
Methoxyoxoiron(III)
[59473-94-8]

FeO(OMe)

M 102.8
Layer structure; layer spacing 997 pm. Brown solid. Insol. MeOH. Ir ν_{CO} 1050 cm^{-1}.

Kikkawa, S. *et al, Inorg. Chem.*, 1976, **15**, 2195 (*synth, mössbauer, struct*)
Son, S. *et al, Inorg. Chem.*, 1980, **19**, 262 (*synth, ir, thermal anal*)
Inorg. Synth., 1983, **22**, 87 (*synth*)

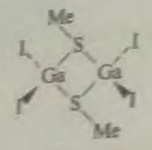
IC-002568

CH_3GaI_2S

Diiodo(methanethiolato)gallium
Diiodo(methylthio)gallane
[88189-09-7]



dimer

M 370.6
Dimeric.
Dimer: [97092-80-3]. *Tetraiodobis[μ-(methanethiolato)] digallium(III), 11CI*
$C_2H_6Ga_2I_4S_2$ M 741.2
Colourless cryst. (CS_2). V. sol. CS_2, Me_2S_2. Heating in Me_2S_2 gives Tetraiodotetrakis[μ-(methanethiolato)]di-μ-thioxotetragallium, IC-004251.

Hoffmann, G.G., Z. Naturforsch., B, 1984, **39**, 352 (*synth, pmr, ir*)
Beardman, A. et al, Inorg. Chim. Acta, 1985, **99**, L39 (*synth, cryst struct*)

IC-002569

CH_3GeNS

Isothiocyanatogermane, 9CI
Germyl isothiocyanate
[16475-45-9]

H_3GeNCS

M 133.7
Synth. from GeH_3Br + AgSCN. Mp 18.6°.

Srivastava, T.N. et al, Can. J. Chem., 1962, **40**, 739 (*synth*)
Davidson, G. et al, Spectrochim. Acta, Part A, 1967, **23**, 2383 (*ir, raman*)
Sullivan, J. et al, J. Mol. Struct., 1980, **60**, 37 (*microwave, ir, raman, struct*)

IC-002570

CH_3IO

Iodosomethane, 11CI
[97551-34-3]

MeIO

M 157.9
Formed from MeI + O_3 + hν in an Ar matrix at 77K.

Hawkins, M. et al, Inorg. Chem., 1985, **24**, 3285 (*synth, ir*)

IC-002571

CH_3IOSn

Tin(*II*) iodide methoxide
Iodo(methoxy)tin
[57745-10-5]

Sn(OMe)I

M 276.6
Orange needles. Mp 150°.

Ewings, P.F.R. et al, J. Chem. Soc., Dalton Trans., 1975, 1717 (*synth, ir, mössbauer*)

CH_3IO_2

Methyl peroxyhypoiodite IC-002572
Peroxyhypoiodous acid methyl ester
[82803-66-5]

MeOOI

M 173.9
Formed in the oxidation/combustion of MeI at 350-500° (MeO_2 + MeI → MeOOI + Me). Not isol.; forms part of a radical chain process.

Antonik, S., Bull. Soc. Chim. Fr., 1982, 128 (*kinetics*)

CH_3IO_3S

Iodomethanesulfonic acid, 9CI IC-002573
[143-47-5]

ICH_2SO_3H

M 222.0
Free acid little studied and apparently not deuct.
Na salt: [126-31-8]. *Methiodal sodium, BAN, INN, ULAN*
Skiodan sodium. Other proprietary names
Radioopaque medium (urographic). Cryst. Sol. H_2O, spar. sol. org. solvs.
▷ PB2250000.
Bromide: [91586-90-2].
CH_2BrIO_3S M 284.9
Pale-violet liq. $Bp_{0.06}$ 78-80°.

Ger. Pat., 532 766, (1929); *CA*, **26**, 480 (*synth*)
Lauer, W.M. et al, J. Am. Chem. Soc., 1935, **57**, 2361 (*synth*)

Negwer, M., Organic-Chemical Drugs and their Synonyms, 6th Ed., Akademie-Verlag, Berlin, 1987, 13.

CH_3IS

Methanesulfenyl iodide, 11CI IC-002574
Thiohypoiodous acid methyl ester. Methyl thiohypoiodite
[86381-89-7]

MeSI

M 174.0
Formed from MeSH + I_2 in gas phase. Not isol. but believed to be thermodynamically stable.

Shum, L.G.S. et al, Int. J. Chem. Kinet., 1983, **15**, 433 (*kinetics, props*)

CH_3KO

Potassium methoxide IC-002575
Methanol, potassium salt, 8CI. Methoxypotassium
[865-33-8]

KOMe

M 70.1
Synth. by dissoln. of K in MeOH. Manuf. by reaction of CaO, ROH (R = C_{1-4} alkyl) and anhydrous KOH. Commercially available. Widely used as a polym. catalyst; base in org. chem. Moisture-sensitive colourless tetragonal cryst. Reacts with H_2O to form MeOH and KOH.
▷ Flammable, corrosive.

Brady, O.L. et al, J. Chem. Soc., 1950, 767 (*uses*)
Weiss, E., Helv. Chim. Acta, 1963, **46**, 2051 (*cryst struct*)

Sigma-Aldrich Library of Chemical Safety Data, 1988, **2**, 2966A (*toxic*)

CH_3LiO

Lithium methoxide IC-002576
Methanol, lithium salt, 8CI
[865-34-9]

LiOMe

M 37.9
Commercially available. Prepared by dissolution of Li in anhydrous MeOH. Moisture sensitive white solid; reacts with water to form LiOH and MeOH. Sol. alcohols.
▷ Flammable.

Kecki, Z. et al, Pol. J. Chem. (Rocz. Chem.), 1963, **37**, 881; *CA*, 1964, **60**, 7592b (*raman, pmr*)

Conrad, W. et al, J. Org. Chem., 1965, **30**, 3498 (*props*)

CH_5N

Methanimine IC-002577
Formamine. Methyleneamine
[2053-29-4]

$H_2C{=}NH$

M 29.0
Interatomic distances: C—H 109.2, C—N 127.3, N—H 102.1 pm; angles: HNC 110.4°, *cis*-HCN 125.1°.
Interstellar molecule; formed by pyrolysis or photolysis of MeN_3, CH_2N_2, $MeNH_2$. $t_{\frac{1}{2}}$ ~ 10 min. at 5 mm.

Milligan, D.E., J. Chem. Phys., 1961, **35**, 1491 (*ir*)

CH_3NOS

Thiocarbamic acid IC-002578
Aminothioformic acid. Carbamothioic acid
[19045-66-0]

$H_2NCOSH \rightleftharpoons H_2NCSOH$

M 77.1
Free acid unknown. Forms two series of esters.
NH_4 salt: [16687-42-6].
Cryst. V. sol. H_2O; spar. sol. EtOH; insol. Et_2O.
S-Me ester: [21325-07-5].
C_2H_5NOS M 91.1
Prisms (Et_2O). Mp 107-108°.
S-Me ester, N-Ac: [34277-65-1].
$C_4H_7NO_2S$ M 133.1
Needles (C_6H_6). Mp 145.5-146°.
S-Et ester: [637-98-9]. *S-Ethyl carbamothioate, 9CI. S-Ethyl thiocarbamate, 8CI. S-Ethyl aminothioformate. Thiourethane*
C_3H_7NOS M 105.1
Has contraceptive props. Plates (C_6H_6). Sol. hot H_2O. Mp 108-109°. The name Thiourethane is applied to both the *S*-Et and *O*-Et (see below) esters.
S-Et ester, N-Ac: [57964-27-9]. *S-Ethyl acetylcarbamothioate, 9CI*
$C_5H_9NO_2S$ M 147.1
Prisms (C_6H_6). Mp 98°.
S-Ph ester: [61642-86-2].
C_8H_9NOS M 167.2
Plates (C_6H_6). Mp 129°.
O-Me ester: [883-43-6].
C_2H_5NOS M 91.1
Mp 43°.
O-Me ester, N-Ac
$C_4H_7NO_2S$ M 133.1
Cryst. (pet. ether). Mp 79-80°.
O-Et ester: [625-57-8]. *O-Ethyl carbamothioate, 9CI. O-Ethyl thiocarbamate, 8CI. O-Ethyl aminothioformate. Xanthogenamide. Thiourethane*
C_3H_7NOS M 105.1
Fungicide. Volatile monoclinic cryst. Spar. sol. H_2O. Mp 40-41° (16°). Dec. on dist.
O-Et ester, N-Ac: [23406-25-7]. *O-Ethyl acetylcarbamothioate, 9CI. O-Ethyl acetylthiocarbamate, 8CI*
$C_5H_9NO_2S$ M 147.1
Prisms (H_2O). Mp 99.5-101°.
O-Et ester, N,N-Di-Me: [17996-36-2]. *O-Ethyl dimethylcarbamothioate, 9CI*
$C_5H_{11}NOS$ M 133.2
Liq. with peculiar odour. d_4^{25} 1.020. Fp 15°. Bp 216°, Bp_{15} 89-89°.
O-Ph ester: [824-48-4].
C_8H_9NOS M 167.2
Needles (EtOH). Mp 132-132.5°.
N-Ph: see Phenylthiocarbamic acid, IC-003718
N-Ph, S-Ph ester: [4910-32-1].
$C_{13}H_{11}NOS$ M 229.3
Mp 125.5-126°.

CH_3NO_2 IC-002580

Carbamic acid

Aminoformic acid

H_2NCOOH

M 61.0

Free acid not known.

▷ Propyl and butyl esters are carcinogenic.

Me ester. [598-55-0]. *Methyl carbamate. Urethylan*

$C_2H_5NO_2$ M 75.0

Mp 54°. Bp 177°, Bp_{14} 82°

▷ FC2450000.

N-Di-Me, Me ester. Methyl dimethylcarbamate. Methyl dimethylaminoformate

$C_4H_9NO_2$ M 103.1

Misc. H_2O. Bp 131°

Ph ester:

$C_7H_7NO_2$ M 137.1

Mp 141°.

Benzyl ester:

$C_9H_9NO_2$ M 151.1

Leaflets. Mp 86°.

Chloride: [463-72-9]. *Carbamic chloride, 9CI. Carbamoyl chloride. Urea chloride (obsol.)*

CH_2ClNO M 79.4

Synth. from phosgene + NH_3. Colourless liq. stable at −80° dec. readily to HCl + HNCO. Mp ~0°. Bp 61-62° dec.

▷ Evolves HCl on standing.

Fluoride: Carbamoyl fluoride. Carbamic fluoride

CH_2FNO M 63.0

Synth. from HNCO + HF in Et_2O. Colourless needles. Slowly hydrol. to HF + HCNO. Sol. Et_2O, H_2O. Mp 47°. Dec. at 60-70° Subl.

Amide: see *Urea, IC-002597*

Azide: see *Carbamic azide, IC-002511*

NH_4 salt: see *Ammonium carbamate, IC-002619*

N-Di-Me, chloride: Chloroformic dimethylamide

C_3H_6ClNO M 107.5

Mp −33°. Bp 167°.

$CH_3N_3O_2S$ IC-002587

Methanesulfonyl azide, 9CI

Mesyl azide

[1516-70-7]

$MeSO_2N_3$

M 121.1

Diazo transfer reagent. d_{20} 1.40. $Bp_{0.5}$ 56°. Unstable above 100°.

▷ Potentially explosive.

Boyer, J.H. *et al, J. Org. Chem.*, 1958, **23**, 1051 (*synth, ir*)
Taber, D.F. *et al, J. Org. Chem.*, 1986, **51**, 4077 (*use*)

CH_3NaO IC-002588

Sodium methoxide

Methanol, sodium salt, 8CI. Methoxysodium. Sodium methylate

[124-41-4]

NaOMe

M 54.0

Synth. by reaction of Na or Na/Hg with dry MeOH in an inert atm. Commercially available as solid or in MeOH soln. Polym. and cyclocondensation catalyst. Powerful nucleophile widely used in org. chem. Moisture-sensitive, white tetragonal cryst. Sol. MeOH. Mp >300°. Reacts with H_2O forming MeOH and aq. NaOH.

▷ Flammable solid; corrosive. PC3570000.

CH_3O_4Re IC-002591

(Methoxy)trioxorhenium(*VII*)

(Methoxo)trioxorhenium, 11CI. Methyl perrhenate. Perrhenic acid methyl ester

[44252-75-7]

$MeOReO_3$

M 265.2

Believed to be polymeric. Synth. from ReO_3Cl and Me_3SiOMe in hexane or from $ReO_3(OSiMe_3)$ and Me_3SiOMe in hexane. Colourless prisms, dec. on heating. Sol. THF, chlorinated hydrocarbons; sl. sol. Et_2O; insol. hydrocarbons.

Edwards, P. *et al*, *J. Chem. Soc., Dalton Trans.*, 1984, 2695 (*synth, ir, nmr, props*)

IC-002592

$CH_3O_6Zr^{\ominus}$

[Carbonato(2–)-*O*]trihydroxyzirconate(*IV*)(1–), HCl

$[(O_2CO)Zr(OH)_3]^{\ominus}$

M 202.2 (ion)
Tetrahedral anion.
Na salt: [92359-62-1].
Synth. from $Zr(SO_4)_2$ and Na_2CO_3 at controlled pH.
White solid + 2 or 3 H_2O.
H compd.: [88689-79-6]. [*Hydrogen carbonato*-O]*trihydroxyzirconium*(IV). (*Bicarbonato*)*trihydroxyzirconium*(IV)
CH_4O_6Zr M 203.2
Synth. from $Zr(SO_4)_2$ + $NaHCO_3$. White solid.

[92359-62-1]

Samchuk, A.I. *et al*, *Ukr. Khim. Zh. (Russ. Ed.)*, 1983, **49**, 1132 (*synth, H compd*)

IC-002593

$CH_3O_7P_2Tc^{\ominus}$

Hydroxy(methylenediphosphonato)technetate(*IV*)(1–)
(*Methylenediphosphonato*)*oxotechnetium*(IV)

$[Tc(OH)(O_3PCH_2PO_3)]^{\ominus}$

M 287.8 (ion)
This is the one well-characterised species in the Tc-MDP system (See Methylenediphosphonate technetium complex, IC-002517). Each Tc bridges two MDP ligands; each MDP bridges two Tc atoms. Synth. by reaction of $TcBr_6^{2\ominus}$ with MDP.
Li salt: Polymeric solid. Formulated as $([Li(OH_2)_3][Tc(OH)(O_3PCH_2PO_3)]\cdot\frac{1}{3}H_2O)_n$.

Libson, K. *et al*, *J. Am. Chem. Soc.*, 1980, **102**, 2476 (*synth, cryst struct*)

IC-002594

$CH_4Cl_4HfN_2O$

Tetrachloro(urea-*O*)hafnium(*IV*), 1HCl
Hafnium(IV) *chloride urea*

[84191-48-0]

$[(H_2N)_2C{=}O]HfCl_4$

M 380.3
Synth. from $HfCl_4$ and excess urea in EtOAc/Et_2O.

Konunova, Ts.B. *et al*, *CA*, 1983, **98**, 45901 (*synth, ir, heat of soln*)

IC-002595

$CH_4Cl_4N_2OZr$

Tetrachloro(urea-*O*)zirconium(*IV*), 1HCl
Zirconium(IV) *chloride urea*

[84191-47-9]

$[(H_2N)_2C{=}O]ZrCl_4$

M 293.0
Synth. from $ZrCl_4$ and urea in EtOAc/Et_2O or EtOAc.

Konunova, Ts.B. *et al*, *Deposited Doc.*, SSPTL, 1981, 784 Khp-D81; *CA*, 1983, **98**, 45901j (*synth, ir, heat of formn*)
Konunova, Ts.B. *et al*, *CA*, 1983, **99**, 168426m.

IC-002596

CH_4N_2O

Ammonium cyanate

$[NH_4][N{=}C{=}O]$

M 60.0
Synth. by reaction of isocyanic acid + anhyd. NH_3. White tetragonal cryst. V. sol. H_2O; sol. EtOH, $CHCl_3$; insol. Et_2O. Rearrs. to urea on heating or prolonged storage.

Inorg. Synth., 1972, **13**, 17; 1976, **16**, 136 (*synth, ir*)

IC-002597

CH_4N_2O

Urea, 9CI, 8CI, USAN
Carbamide. Ureaphil

[57-13-6]

H_2NCONH_2

M 60.0
Constit. of all vertebrate tissues and of many invertebrates. Found esp. in urine. Manuf. on large scale from NH_3 + CO_2 at high press. World prodn. 7.2 mt/a in 1970. Also occurs in many plants in traces and in larger amounts in fungi. Fertiliser, cattle feed supplement, also used in manuf. of urea-formaldehyde resins. Forms clathrates (inclusion complexes) with hydrocarbons. This prop. used in petrochemicals industry. Diuretic, dermatic, keratolytic and antiseptic. Tetragonal needles or prisms with faint salty taste (H_2O or EtOH). V. sol. H_2O, sol. MeOH, EtOH, insol. $CHCl_3$, C_6H_6. Aq. solns hydrol. v. slowly to ammonium carbamate then to NH_3 + CO_2. Weak base. Polymer with formaldehyde (Polynoxylin, BAN, INN) used as a topical antibacterial and antifungal agent.

▷ Mod. toxic. YR6250000.

B,HCl: [506-89-8].
Plates or faintly yellow, deliquescent cryst. Sol. H_2O. Mp 145° dec.
N-*Ac*: [591-07-1]. N-*Aminocarbonylacetamide*, *9CI*
$C_3H_6N_2O_2$ M 102.0
Cryst. Mp 215-216°.
N,N'-*Di-Ac*: N,N'-*Carbonylbisacetamide*, *9CI*
$C_5H_8N_2O_3$ M 144.1
Needles (EtOH). Mp 152-153°.
N,N'-*Dibenzoyl*:
$C_{15}H_{12}N_2O_3$ M 268.2
Needles (Me_2CO or EtOH). Mp 215.5-216.5°.
Cpd. with H_2O_2 (*1:1*): [124-43-6]. ***Carbamide peroxide*, USAN**
Topical antiinfective (dental). Component of Murine.
▷ YT4850000.

$CH_6N_2O_3$ IC-002619

Ammonium carbamate

Carbamic acid ammonium salt

$[NH_4][H_2NCO_2]$

M 78.0

Formed by reaction of NH_3 (liq.) and CO_2 (solid). White cryst., sl. volatile at 20° and completely dissoc. at 59°. Hydrates to $(NH_4)_2CO_3$. V. sol. H_2O.

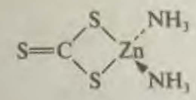
Inorg. Synth., 1964, **2**, 85 (*synth*)

$CH_6N_2S_3Zn$ IC-002620

Diammine[carbonotrithioato(2 –)-*S,S'*]zinc

Diammine(trithiocarbonato)zinc

[15244-60-7]



M 207.6

Possibly dimeric. Cryst. Dec. at 50°.

Dimer: [51435-88-2]. *Tetraamminebis[μ-[carbonotrithioato(2 –)-S:S']]dizinc*

$C_2H_{12}N_4S_6Zn_2$ M 415.3

Trifluoromethanesulfonate: [84254-59-1].
White solid. Sol. H_2O.
Dixon, N.E. *et al*, *Inorg. Chem.*, 1984, **23**, 2940 (*synth, ir, uv, kinetics*)

IC-002681

$CH_{15}F_3N_5O_3OsS^{2\oplus}$

Pentaammine(trifluoromethanesulfonato-*O*)osmium(*III*)(2+), 11Cl

Pentaammine(triflato)osmium(III)(2+)

$[Os(NH_3)_5(OSO_2CF_3)]^{2\oplus}$

M 424.4 (ion)
Useful synthetic intermed.
Bis-trifluoromethylsulfonate: Osmium(III) *trifluoromethylsulfonate pentaammine*
$C_3H_{15}F_9N_5O_9OsS_3$ M 722.5
Synth. by dissolving $[Os(NH_3)_5N_2]Cl_2$ in CF_3SO_3H followed by oxidation with Br_2.
Lay, P.A. *et al*, *J. Am. Chem. Soc.*, 1982, **104**, 7658.
Harman, W.D. *et al*, *J. Am. Chem. Soc.*, 1990, **112**, 2261 (*use*)

IC-002682

$CH_{15}F_3N_5O_3PtS^{3\oplus}$

Pentaammine(trifluoromethanesulfonato-*O*)platinum(*IV*)(3+), 11Cl

Pentaammine(trifluoromethylsulfato)platinum(IV)(3+)

$[Pt(NH_3)_5(OSO_2CF_3)]^{3\oplus}$

M 429.3 (ion)
Octahedral struct. Synth. from Pentaammine(chloro) platinum(*IV*)(3+), IC-016444 + CF_3SO_3H. Useful for synth. of other $[Pt(NH_3)_5L]^{4\oplus}$ species.
Tristrifluoromethylsulfonate: [84254-63-7].
White solid. Sol. CF_3SO_3H.
Dixon, N.E. *et al*, *Inorg. Chem.*, 1983, **22**, 846; 1984, **23**, 2940 (*synth, ir, uv, pmr, reactions*)
Inorg. Synth., 1986, **24**, 277 (*synth*)

IC-002683

$CH_{15}F_3N_5O_3RhS^{2\oplus}$

Pentaammine(trifluoromethanesulfonato-*O*)rhodium(*III*)(2+), 11Cl

$[Rh(NH_3)_5(OSO_2CF_3)]^{2\oplus}$

M 337.1 (ion)
Octahedral complex.
Bis-trifluoromethanesulfonate: [84254-57-9]. *Rhodium*(III) *trifluoromethanesulfonate pentaammoniate*
Pale yellow solid.
Dixon, N.E. *et al*, *Inorg. Chem.*, 1984, **23**, 2940 (*synth, ir, uv, pmr*)

IC-002684

$CH_{15}IrN_5O_3^{\oplus}$

Pentaammine[carbonato(2−)-*O*]iridium(*III*)(1+), 9Cl

[50600-91-4]

$[Ir(NH_3)_5(CO_3)]^{\oplus}$

M 337.3 (ion)
Perchlorate: [50600-92-5].
White solid. Sol. H_2O.
▷ Potentially explosive.
Palmer, D.A. *et al*, *Inorg. Chem.*, 1974, **13**, 965 (*synth, kinetics*)
Inorg. Synth., 1977, **17**, 152 (*synth*)

IC-002685

$CH_{15}IrN_6S^{2\oplus}$

Pentaammine(thiocyanato-*N*)iridium(*III*)(2+), 9Cl

Pentammine(isothiocyanato)iridium(III)(2+)

$[Ir(NH_3)_5(NCS)]^{2\oplus}$

M 335.4 (ion)
Diperchlorate: [15691-81-3].
White cryst. Sol. H_2O, sl. sol. Me_2CO.
▷ Potentially explosive.
Schmidtke, H.H., *Inorg. Chem.*, 1966, **5**, 1682 (*synth, ir, uv-vis*)
Inorg. Synth., 1970, **12**, 243 (*synth*)
Wagner, F.E. *et al*, *Chem. Phys.*, 1974, **4**, 284 (*mössbauer*)

IC-002686

$CH_{15}IrN_6S^{2\oplus}$

Pentaammine(thiocyanato-*S*)iridium(*III*)(2+), 9Cl

[29589-10-4]

$[Ir(NH_3)_5(SCN)]^{2\oplus}$

M 335.4 (ion)
Linkage isomer of Pentaammine(thiocyanato-*N*) iridium(*III*)(2+), IC-002685.
Diperchlorate: White cryst.
▷ Potentially explosive.
Schmidtke, H.H., *Inorg. Chem.*, 1966, **5**, 1682 (*synth, ir, uv-vis*)
Flack, H.D. *et al*, *Acta Crystallogr., Sect. B*, 1973, **29**, 1099 (*cryst struct*)
Wagner, F.E. *et al*, *Chem. Phys.*, 1974, **4**, 284 (*mössbauer*).

IC-002687

$CH_{15}N_5OOs^{2\oplus}$

Pentaamminecarbonylosmium(*II*)(2+), 9Cl

[70528-08-4]

$[Os(NH_3)_5CO]^{2\oplus}$

M 303.3 (ion)
Dichloride: [39176-85-7].
Synth. by reaction of $[OsCl(NH_3)_5]Cl_2$ in formic acid with Zn and CO followed by addition of KCl.
Colourless powder. Ir ν_{CO} 1890, 1875, 1823; ν_{Os-C} 589; ν_{Os-NH_3} 450 cm^{-1}.
Dibromide: [39176-86-8].
Synth. analogous to chloride. Ir ν_{CO} 1895, 1883, 1830; ν_{Os-C}; ν_{Os-C} 561, ν_{Os-NH_3} 439 cm^{-1}.
Diiodide: [39176-87-9].
Synth. analogous to chloride. Ir ν_{CO} 1907, 1898, 1847; ν_{Os-C} 557; ν_{Os-NH_3} 433 cm^{-1}.
Allen, A.D. *et al*, *Can. J. Chem.*, 1972, **50**, 3093 (*synth*)
Buhr, J.D. *et al*, *Inorg. Chem.*, 1979, **18**, 2208; 1980, **19**, 2425 (*uv, ir, electrochem, uv*)
Harman, W.D. *et al*, *J. Am. Chem. Soc.*, 1986, **108**, 8223 (*use*)
Morris, R.H. *et al*, *Inorg. Chem.*, 1987, **26**, 2674 (*uv, pe*)

IC-002688

$CH_{15}N_5ORu^{2\oplus}$

Pentaammine(carbonyl)ruthenium(*II*)(2+), 9Cl

[31418-66-3]

$[Ru(NH_3)_5CO]^{2\oplus}$

M 214.2 (ion)
Prepd. by treating Pentaammine(aqua)ruthenium(*II*)(2+), IC-019980-7 with CO or Aquacarbonyltetrachlororuthenate(2−), IC-002500 with aq. NH_3.
Dichloride: [23351-13-5].
$CH_{15}Cl_2N_5ORu$ M 285.1
Yellow salt. Ir ν_{CO} 1922 cm^{-1}.
Dibromide: [23351-14-6].
$CH_{15}Br_2N_5ORu$ M 374.0
Yellow salt. Ir ν_{CO} 1935 cm^{-1}.
Diiodide: [21884-94-6].
$CH_{15}I_2N_5ORu$ M 468.0
Yellow salt. Ir ν_{CO} 1948 cm^{-1}.
Bis-tetrafluoroborate: [34843-20-4].
Yellow salt. Ir ν_{CO} 1972 cm^{-1}.
Bis-hexafluorophosphate: [34843-19-1].
Yellow salt. Ir ν_{CO} 1994 cm^{-1}.
Campbell, C.H. *et al*, *J. Organomet. Chem.*, 1968, **14**, 349 (*synth, ir*)
Allen, A.D. *et al*, *Can. J. Chem.*, 1969, **47**, 1605 (*synth, reactions, uv*)

IC-002689

$CH_{15}N_5O_3Rh^{\oplus}$

Pentaammine[carbonato(2−)-*O*]rhodium(*III*)(1+), 8CI

[50600-89-0]

$[RhCO_3(NH_3)_5]^{\oplus}$

M 248.0 (ion)
Perchlorate: [50600-90-3].
Pale yellow cryst. Sol. H_2O.
▷ Potentially explosive.

Palmer, D.A. *et al*, *Inorg. Chem.*, 1974, **13**, 965 (*synth, kinetics, uv*)
Spitzer, U. *et al*, *Inorg. Chem.*, 1982, **21**, 2821 (*kinetics, uv*)

IC-002690

$CH_{15}N_6ORh^{2\oplus}$

Pentaammine(cyanato-*N*)rhodium(2+), 8CI
Isocyanatopentamminerhodium(III)

$[Rh(NH_3)_5(NCO)]^{2\oplus}$

M 230.0 (ion)
Diperchlorate: [34420-30-9].
Pale yellow solid.
▷ Potentially explosive.

Ford, P.C. *et al*, *Inorg. Chem.*, 1971, **10**, 2153 (*synth, uv, kinetics*)

IC-002691

$CH_{15}N_6ORu^{2\oplus}$

Pentaammine(cyanato-*N*)ruthenium(*III*)(2+), 9CI

$[Ru(NH_3)_5(NCO)]^{2\oplus}$ (C_{4v})

M 228.2 (ion)
Prepd. by anation of $[Ru(NH_3)_5Cl]^{2\oplus}$ or oxidation of the ruthenium(*II*) analogue. Acid hydrol. yields $[Ru(NH_3)_6]^{3\oplus}$ and CO_2.
Diperchlorate: Yellow solid. Sol. H_2O.
▷ Potentially explosive.
Dibromide: [55101-90-1].
Yellow solid.

Ford, P.C., *Inorg. Chem.*, 1971, **10**, 2153 (*synth, hydrol*)
Lin, S.-W. *et al*, *Inorg. Chim. Acta*, 1971, **5**, 290 (*synth, uv*)
Evans, R.S., *Inorg. Chem.*, 1975, **14**, 1705 (*mcd*)

IC-002692

$CH_{15}N_6RuS^{2\oplus}$

Pentaammine(thiocyanato-*N*)ruthenium(*III*)

$[Ru(NH_3)_5(NCS)]^{2\oplus}$ (C_{4v})

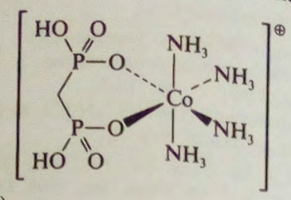
M 244.3 (ion)
Only the *N*-bonded thiocyanato isomer has been observed. Reports of the *S*-bonded isomer are unsupported.
Prepd. by oxidation of ruthenium(*II*) analogue.
Addition of $Hg^{2\oplus}$ to aq. soln. changes colour to yellow.
Diperchlorate: [38139-15-0].
Violet-red cryst. Sol. H_2O.
▷ Potentially explosive.

Lin, S.-W. *et al*, *Inorg. Chim. Acta*, 1971, **5**, 290 (*purported S-bonded isomer*)
Lim, H.S. *et al*, *Inorg. Chem.*, 1972, **11**, 1460 (*synth, uv, electrochem*)

IC-002693

$CH_{16}CoN_4O_6P_2^{\oplus}$

Tetraammine(methylenediphosphato)cobalt(*III*)(1+)



M 301.0 (ion)
Octahedral coordination at Co. The methylenediphosphato ligand has the half chair conform.
Chloride: [90791-30-3].
Tetraammine[[methylenebis[phosphonato]](4−)] cobaltate(1−) hydrogen chloride (1:2:1), 11CI
Dark red cryst.

Haromy, T.P. *et al*, *Inorg. Chem.*, 1984, **23**, 2412 (*synth, cryst struct*)

IC-002694

$CH_{16}CoN_5O_2^{2\oplus}$

Pentaammine(formato-*O*)cobalt(*III*)(2+), 9CI

[19173-64-9]

$[(H_3N)_5Co(OOCH)]^{2\oplus}$

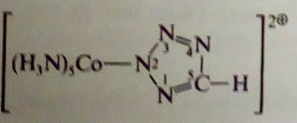
M 189.1 (ion)
Diperchlorate: [28660-81-3].
Sol. H_2O.
▷ Potentially explosive.
Dinitrate: [52524-46-6].
Sol. DMSO.

Barrett, M. *et al*, *Inorg. Chem.*, 1971, **9**, 1983 (*synth, kinetics*)
Balahura, R.J. *et al*, *Inorg. Chem.*, 1973, **12**, 1438 (*synth*)
Yoshida, H. *et al*, *Bull. Chem. Soc. Jpn.*, 1974, **47**, 669 (*synth, pmr*)

IC-002695

$CH_{16}CoN_9^{2\oplus}$

Pentaammine(1*H*-tetrazolato-N^2)cobalt(*III*)(2+), 11Cl



M 213.1 (ion)
Bis-tetrafluoroborate: [87371-43-5].
5-Cyano, bis-tetrafluoroborate: [87371-39-9].
Pentaamine(1H-tetrazole-5-carbonitrilato-N^2)cobalt(III) (2+) *tetrafluoroborate*
5-Me: see *Pentaammine(5-methyl-1H-tetrazolato)cobalt*(III) (2+), *IC-003393*
5-Ph: see *Pentaammine(5-phenyl-1H-tetrazolato)cobalt*(III) (2+), *IC-005812*
5-Carboxamide: see *Pentaammine(1H-tetrazole-5-carboxamidato-N^1)cobalt*(III)(2+), *IC-003384*

Graeber, E.J. *et al*, *Acta Crystallogr., Sect. C*, 1983, **39**, 567 (*cryst struct*)
Balahura, R.J. *et al*, *Inorg. Chem.*, 1983, **22**, 3602 (*synth, pmr, cmr, N-15 nmr, uv, redox kinetics, deriv*)

IC-002696

$CH_{16}IrN_5O_2^{2\oplus}$

Pentaammineformatoiridium(*III*)(2+), 9CI

[52795-08-1]

$[Ir(NH_3)_5(OOCH)]^{2\oplus}$

M 322.3 (ion)
Diperchlorate: [15646-83-0].

White cryst.
Schmidtke, H.H., *Inorg. Chem.*, 1966, **5**, 1682 (*synth*)
Wagner, F.E. *et al*, *Chem. Phys.*, 1974, **4**, 284 (*mössbauer*)
Curtis, N.J. *et al*, *Aust. J. Chem.*, 1983, **36**, 1327 (*electrochem*)

IC-002697

$CH_{16}N_5O_2Rh^{2\oplus}$

Pentaammineformatorhodium(*III*)(2+), 8CI

$[Rh(NH_3)_5(OOCH)]^{2\oplus}$

M 233.0 (ion)
Diperchlorate: [15612-60-9].
White cryst. Sol. H_2O.
▷ Potentially explosive.

Schmidtke, H.H. *et al*, *Z. Phys. Chem. (Frankfurt am Main)*, 1965, **45**, 305 (*synth*)
Monacelli, F. *et al*, *J. Inorg. Nucl. Chem.*, 1967, **29**, 1079 (*synth, kinetics*)

IC-002698

$CH_{16}N_5O_2Ru^{\oplus}$

Pentaammine(formato)ruthenium(*II*)(1+), 9CI
Pentaammine(methanoato)ruthenium(II)(1+)

$[Ru(NH_3)_5OOCH]^{\oplus}$

M 231.2 (ion)
Undergoes rapid aquation (k_{aq} 1.28 s^{-1}). Prepd. by electrochemical reduction of Pentaammine(formato-*O*) ruthenium(*III*)(2+), IC-002699. Only obsd. in soln. Sol. H_2O.

Stritar, J.A. *et al*, *Inorg. Chem.*, 1969, **8**, 2281 (*synth, electrochem, uv, aquation*)

IC-002699

$CH_{16}N_5O_2Ru^{2\oplus}$

Pentaammine(formato-*O*)ruthenium(*III*)(2+), 9CI
Pentaamminemethanoatoruthenium(III)(2+)
[38744-90-0]

$[Ru(NH_3)_5(O_2CH)]^{2\oplus}$

M 231.2 (ion)
Prepd. by oxidising the ruthenium(*II*) analogue. Readily reduced by common one-electron reducing reagents; undergoes a wide range of anation and aquation reaction.
Diperchlorate: Yellow solid. Sol. H_2O.
▷ Potentially explosive.

Stritar, J.A. *et al*, *Inorg. Chem.*, 1969, **8**, 2281 (*synth, uv, reactions*)
Lin, S.-W. *et al*, *Inorg. Chim. Acta*, 1971, **5**, 290 (*uv*)
Ohyoshi, A. *et al*, *Bull. Chem. Soc. Jpn.*, 1972, **45**, 2121; 1973, **46**, 2431 (*reactions*)
Ohkubo, K. *et al*, *Bull. Chem. Soc. Jpn.*, 1973, **46**, 2651; 1975, **48**, 774 (*reactions*)

IC-002700

$CH_{17}CoN_6O_2^{2\oplus}$

Pentaammine(carbamato-*O*)cobalt(*III*)(2+), 9CI

[19173-65-0]

$[Co[OC(O)NH_2](NH_3)_5]^{2\oplus}$

M 204.1 (ion)
Diperchlorate: Sol. H_2O.

Sargeson, A.M. *et al*, *Inorg. Chem.*, 1966, **5**, 1094 (*synth, uv*)
Buckingham, D.A. *et al*, *Inorg. Chem.*, 1974, **13**, 2630 (*ir, uv*)

IC-002701

$CH_{17}CoN_7^{3\oplus}$

Pentaammine(cyanamide)cobalt(*III*)(3+), 8CI

[31303-35-2]

$[Co(N{\equiv}CNH_2)(NH_3)_5]^{3\oplus}$

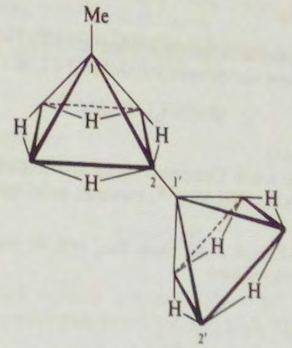
M 186.1 (ion)
Octahedral geometry presumed. Kinetics of the chromium(*II*) reduction for this complex have been studied.
Triperchlorate: Not isol. Sol. H_2O, DMSO.
▷ Potentially explosive.

Balahura, R.J. *et al*, *J. Am. Chem. Soc.*, 1971, **93**, 625 (*synth, uv, pmr, props, kinetics*)

IC-002702

$CH_{18}B_{10}$

2-(1′-Pentaboran-9-yl)-1-methylpentaborane(9)
Di-1-pentaborylmethane
[89017-48-1]



M 138.2
conjuncto-. Synth. by cophotolysis of a 70% B_5H_9/30% 1-MeB_5H_8 mixt.

Sneddon, L.G. *et al*, *J. Am. Chem. Soc.*, 1984, **106**, 2275 (*synth, B-11 nmr*)

IC-002703

$CH_{18}CoN_5O_3S^{2\oplus}$

Pentaammine(methanesulfonato-*O*)cobalt(*III*)(2+), 10CI

$[Co[OS(O)_2Me](NH_3)_5]^{2\oplus}$

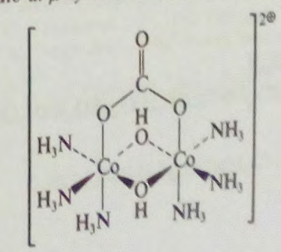
M 239.1 (ion)
Diperchlorate: [76024-71-0].
Pink solid. Sol. DMSO.

Buckingham, D.A. *et al*, *Inorg. Chem.*, 1981, **20**, 1647 (*synth, uv, pmr, kinetics*)

IC-002704

$CH_{20}Co_2N_6O_5^{2\oplus}$

Hexaammine[μ-[carbonato(2−)-*O*:*O*′]]di-μ-hydroxydicobalt(2+), 10CI
μ-Carbonato-di-μ-hydroxo-bis[triamminecobalt(III)]



M 314.0 (ion)
Bioctahedral cation.

Sulfate: [75476-69-6].
Red cryst. + $5H_2O$. Sol. H_2O; insol. non-aq. solvs.

Churchill, M.R. *et al, Inorg. Chem.*, 1981, **20**, 376 (*synth, cryst struct*)

IC-002705

$CH_{20}N_6Ru^{2\oplus}$

Pentaammine(methylamine)ruthenium(*II*)(2+)
Pentaammine(methanamine)ruthenium(2+)

$[(H_3N)_3RuNH_2Me]^{2\oplus}$

M 217.2 (ion)
Sol. dil. HCl.
Bis-hexafluorophosphate: [56082-86-1].
Synth. from Pentaammine(aqua)ruthenium(*II*)(2+), IC-019980 + methylamine, followed by $[NH_4][PF_6]$. Yellow cryst.

Diamond, S.E. *et al, J. Am. Chem. Soc.*, 1975, **97**, 2661 (*synth, electrochem, oxidation*)

IC-002706

$CH_{20}N_6Ru^{3\oplus}$

Pentaammine(methylamine)ruthenium(*III*)(3+)
Pentaammine(methanamine)ruthenium(3+), 9Cl

$[Ru(NH_3)_5NH_2Me]^{3\oplus}$

M 217.2 (ion)
Not isol. as a salt. Generated by electrochemical oxidation of $[Ru(NH_3)_5(NH_2Me)]^{2\oplus}$. Unstable soln. species. Sol. dil. HCl.

Diamond, S.E. *et al, J. Am. Chem. Soc.*, 1975, **97**, 2661 (*synth, electrochem, reaction*)

IC-002707

$CH_{20}Na_2O_{13}$

Sodium carbonate (Na_2CO_3) decahydrate
Carbonic acid, disodium salt, decahydrate, 8CI. Washing soda
[6132-02-1]

$Na_2CO_3.10H_2O$

M 286.1
Synth. by cryst. from aq. Na_2CO_3. Heat storage material. Commercially available. White efflorescent monoclinic cryst. Dec. on heating by H_2O loss giving the monohydrate and the anhydrous material. V. sol. H_2O (22 g per 100 cm^3 at 0°; 421 g per 100 cm^3 at 104°); insol. EtOH. ΔH_f° −4082.5 kJ mol^{-1}; ΔG_f° −3424.3 kJ mol^{-1}; S° 53.6 J K^{-1} mol^{-1}.

$CH_{24}Mg_6Mn_2O_{23}$

Desautelsite
[70212-18-9]

$Mg_6Mn_2(OH)_{16}CO_3.4H_2O$

M 659.8
Trivalent Mn analogue of Pyroaurite. Mineral, occurs at sites in USA and Japan. Bright orange cryst. Readily sol. aq. HCl. Hexagonal struct. Mg and Mn may be ordered.

Dunn, P.J. *et al, Am. Mineral.*, 1979, **64**, 127 (*struct*)
Gmelin Handbook Inorg. Chem., Syst. No. 56, 1981, **C7**, 218 (*rev, bibl*)

IC-002710

$CH_{30}Ca_3O_{25}SSi$

Thaumacite
[12539-13-8]

$Ca_3[Si(OH)_6][SO_4][CO_3].12H_2O$

M 622.6
Member of ettringite group. Hexahydroxo silicate. Mineral. Colourless or white cryst.

Kirov, G.N. *et al, Mineral. Mag.*, 1968, **36**, 1003 (*ir*)
Edge, R.A. *et al, Acta Crystallogr., Sect. B*, 1971, **27**, 594 (*cryst struct*)

IC-002712

CHfN

Hafnium carbide nitride (HfCN), 11CI
[12601-88-6]

HfCN

M 204.5
Synth. by heating $HfCl_4$ with NH_3 and CH_2Cl_2 at 800°. Used in cermets and in coatings for cutting tools and gas turbine blades.

[58926-03-9]
Japan. Pat., 59 16 968, (1984); *CA*, **100**, 214501w (*synth*)
Ger. Pat., 2 043 411, (1971); *CA*, **75**, 24552f (*synth*)

IC-002714

$CHgN_2O_3$

Mercury cyanide nitrate ($Hg(CN)NO_3$)
[74227-08-6]

$Hg(NO_3)CN$

M 288.6
Contains infinite chains of (—Hg—CN—). Hg has additional contacts with 6 O from 3 NO_3 groups. Obt. by evap. of conc. soln. of $Hg(CN)_2$ and conc. HNO_3. Hexagonal cryst.

Mahon, C. *et al, Inorg. Chem.*, 1971, **10**, 2331 (*synth, ir, cryst struct*)

IC-002715

CHg_2O_3

Mercury(*I*) carbonate (Hg_2CO_3)
Carbonic acid, dimercury(1+) (1:1) salt
[6824-78-8]

Hg_2CO_3

M 461.1
Synth. from $Hg_2(NO_3)_2$ and K_2CO_3. White photosensitive powder, which dec. at 130°. Prac. insol. H_2O (4.5×10^{-4} g per 100 cm^3). Dec. by hot H_2O. Turns yellow on standing due to hydrol. K_{sp} 3.6×10^{-17} at 25°.

[13370-71-3]

IC-002716

[CHo]

Holmium carbides

Known phases include Ho_3C, Ho_2C_3, HoC_2.

Holmium carbide (*HoC*$_2$) [12071-14-6]
C_2Ho M 188.9
Possesses CaC_2 struct. Brassy yellow solid. On hydrol., affords principally C_2H_2 but with some C_2H_4 and C_2H_6 and other hydrocarbons. Undergoes $\alpha \rightarrow \beta$ transition at 1305° (1280°). $\mu_{eff} = 10.47\mu_B$ (θ −25.6°).

[ClORu] IC-002720

(Carbonyl)iodoruthenium(*I*)

$[Ru(CO)_2I]_n$

Struct. and formulation uncertain: prob. polymeric. Prepd. by treating $Ru(CO)_5$ with I_2, RuI_3 with CO, or Dicarbonyltetraiodoruthenate(2−), IC-003444 with CO. Orange solid. Sol. C_6H_6.

Manchot, W. *et al*, *Z. Anorg. Allg. Chem.*, 1936, **226**, 385 (*synth*)

$Cl_3OPd^{\ominus}$ IC-002721

Carbonyltriiodopalladate(1−)

[106816-63-1]

$[PdI_3(CO)]^{\ominus}$ (C_{2v})

M 515.1 (ion)

Catalyst/intermed. in reductive carbonylation of esters to aldehydes.

Tetrabutylammonium salt:
$C_{17}H_{36}I_3NOPd$ M 757.6
Readily loses CO in soln.

Graff, J.L. *et al*, *J. Chem. Soc., Chem. Commun.*, 1987, 337 (*use*)
Andreini, B.P. *et al*, *J. Organomet. Chem.*, 1988, **354**, 369 (*synth, ir*)

$Cl_3OPt^{\ominus}$ IC-002722

Carbonyltriiodoplatinate(1−)

[66213-26-1]

$[Pt(CO)I_3]^{\ominus}$

M 603.8 (ion)
Ir ν_{CO} 2078 cm^{-1} (CH_2Cl).
K salt: Red cryst. Mp 100° dec.
Tetrabutylammonium salt: [66213-27-2].
Orange cryst. (Me_2CO/Et_2O). Mp 128°.

Malatesta, L. *et al*, *Gazz. Chim. Ital.*, 1960, **90**, 1505 (*synth*)

Cl_3ORh IC-002723

Carbonyltriiodorhodium, 8CI

Triiodocarbonylrhodium

[27857-60-9]

RhI_3CO

M 511.6
Black cryst. Ir ν_{CO} 2073 cm^{-1} (KBr).

Colton, R. *et al*, *Aust. J. Chem.*, 1970, **23**, 1351 (*synth, ir*)

Cl_3ORu IC-002724

Carbonyltriiodoruthenium(*III*), 8CI

[32073-82-8]

$Ru(CO)I_3$

M 509.7

Tentative identity of soln. species; it refers to the presence of a likely reactive moiety, rather than a specific species. Synth. (MeOH soln.) by exposing a suspension of RuI_3 in MeOH to CO (1atm.) for 1 week. Deep-red. Characterised spectroscopically. Sol. MeOH. Ir ν_{CO} 1995 cm^{-1} (MeOH).

Colton, R. *et al*, *Aust. J. Chem.*, 1969, **22**, 2011; 1971, **24**, 903 (*ir, synth*)

$Cl_5IrO^{2\ominus}$ IC-002725

Carbonylpentaiodoiridate(2−), 9CI

$[Ir(CO)I_5]^{2\ominus}$

M 854.7 (ion)

Di-K salt: [53728-64-6].
Cl_5IrK_2O M 932.9
Dark-red cryst.

Di-Cs salt: [30192-03-1].
CCs_2I_5IrO M 1120.5
No phys. props reported.

Bis-Et_4N salt: [28491-15-8].
Ir ν_{CO} 2019 cm^{-1} ($MeNO_2$).

$Cl_{14}Zr_6$ IC-002727

Dodeca-μ-iododiiodo-μ_6-methanetetraylhexazirconium, 11CI

Zirconium carbide iodide (Zr_6CI_{14}). Carbidododeca-μ-iododiiodohexazirconium

[98193-82-9]

As Dodeca-μ-chlorodichloro-μ_6-methanetetraylhexazirconium, IC-002381 with

X = I

M 2336.0
Synth. by heating ZrI_4, Zr and graphite in a sealed Ta tube at 850°. $Zr_6I_{12}C$ and $MZr_6I_{14}C$ (M = K, Rb, Cs) are also known.

Smith, J.D. *et al*, *J. Am. Chem. Soc.*, 1985, **107**, 5704 (*synth, cryst struct*)

CKN IC-002728

Potassium cyanide

[151-50-8]

KCN

M 65.1
NaCl struct. Synth. by neutralisation of KOH or K_2CO_3 with aq. HCN. Commercially available. Used in electroplating gold and silver. Also used to generate org. cyanides by reaction with the corresp. halides (cyanation reactions). Deliquescent colourless cubic cryst. Undergoes cubic to orthorhombic transition at −60°. V. sol. H_2O (72 g per 100 cm^3 at 25°); spar. sol. EtOH (0.88 g per 100 cm^3 at 20°); sol. MeOH (4.9 g per 100 cm^3 at 20°). Mp 622°. ΔH_f° −113.5 kJ mol^{-1}; ΔG_f° −102.0 kJ mol^{-1}; S° 128 J K^{-1} mol^{-1}.

▷ Highly toxic, irritant. TS8750000.

CKNO IC-002729

Potassium cyanate

Cyanic acid, potassium salt, 8CI

[590-28-3]

K[OCN]

M 81.1
Struct. related to KHF_2. Synth. either by precipitation reaction of $Hg(OCN)_2$ + KSCN in Me_2CO or by mild oxidation of aq. KCN using Pb(*IV*). Commercially available. Used for the carbonitridation of steels. Colourless tetragonal cryst. V. sol. H_2O (75 g per 100 cm^3 at 25°); insol. EtOH. Dec. on heating → KCN + O_2.

$CKNO_4S_2Sn$ IC-002730

Potassium tin sulfate thiocyanate ($KSn(SO_4)(NCS)$)

Potassium (isothiocyanato)sulfatostannate(1−), 8CI

$KSn(SO_4)NCS$

M 311.9
Synth. from $SnSO_4$ + KNCS. Cryst.

Chamberlain, B.R. *et al*, *J. Chem. Soc. A*, 1969, 354 (*synth, ir, cryst struct*)

CKNS IC-002731

Potassium thiocyanate

Thiocyanic acid, potassium salt, 8CI

[333-20-0]

K[SCN]

M 97.1
Prepd. by fusing together KCN and sulfur. Commercially available. Used in electroplating solns., particularly for silver, and also for photographic developers. Colourless orthorhombic deliquescent. cryst. Undergoes orthorhombic to tetragonal transition at 160°. V. sol. H_2O (177 g per 100 cm^3 at 0°; 217 g per 100 cm^3 at 20°), Me_2CO (21 g per 100 cm^3 at 22°); sol. EtOH. Mp 173°. ΔH_f° −200 kJ mol^{-1}; ΔG_f° −178 kJ mol^{-1}; S° 124 J K^{-1} mol^{-1}.

▷ Toxic. Reaction with $KHSO_4$ yields free HNCS. XL1925000.

CK_2O_3 IC-002733

Potassium carbonate (K_2CO_3)

Carbonic acid, dipotassium salt, 8CI. Pearl ash

[584-08-7]

K_2CO_3

M 138.2
Synth. by reaction of CO_2 with KOH dissolved in MeOH or EtOH, or by thermal dehydration of the sesquihydrate. Commercially available. Catalyst for coal gasification. Also used in photographic developers, fire extinguishers and the production of speciality glasses and ceramics. Hygroscopic colourless monoclinic cryst. Undergoes polymorphic change at 250°. Dec. on heating with CO_2 loss. V. sol. H_2O (112 g per 100 cm^3 at 20°; 156 g per 100 cm^3); insol. EtOH, Me_2CO. Mp 901°. ΔH_f° −1150 kJ mol^{-1}; ΔG_f° −1065 kJ mol^{-1}; S° 155.5 J K^{-1} mol^{-1}.

▷ Irritant. TS7750000.

Sesquihydrate: [6381-79-9].
$C_2H_6K_4O_9$ M 330.4

Cryst. from aq. solns. of K_2CO_3 at 40°. Commercially available. Colourless monoclinic cryst. Dec. on heating with H_2O loss ($-\frac{1}{2}$ H_2O at 235°; $-1\frac{1}{2}$ H_2O at 273°). V. sol. H_2O (268 g per 100 cm^3 at 100°); insol. EtOH.

▷ Irritant.

LiCN

M 32.9

Prepd. by reaction of HCN with Li dissolved in liq. NH_3 or by reaction of Li with AgCN (or $Hg(CN)_2$) in THF in presence of naphthalene. Alternatively obt. by reaction of BuLi in hexane with HCN in C_6H_6. Commercially available as solid or in soln. (0.5 *M*) in DMF. DMF solns. are effective reagents for halogen displacement. Catalyst for polym. of vinyl compds. White orthorhombic cryst. Reacts with acids with liberation of HCN. Forms a bis(THF) adduct. Mp 160°.

▷ Highly toxic.

[CMn]

Manganese carbides

Important in steel and as constituents of more complex metal alloys.

Manganese carbide ***($Mn_{23}C_6$), 11CI*** [12266-65-8]
C_6Mn_{23} M 1335.6
Cubic struct. consists of Mn-centred cuboctahedra of Mn and Mn cubes separated by C atoms. This is the only manganese carbide in which C occupies square antiprismatic voids. Isomorphous with $Cr_{23}C_6$. Synth. from Mn and graphite by sintering at 850° for 80h. Also formed from $Mn_2(CO)_{10}$ at 900° mixed with MnO and α-Mn. Antiferromagnetic between 90-400K, ferromagnetic at higher temps. $\mu_{eff} = 4.38\mu_B$ suggesting Mn^{+0} state. Reacts with oxygen, dec. in air in 20-40 h. Mp 1010°. ΔH_f° −245.5 kJ mol^{-1}; ΔS_f° 3.1 J K^{-1} mol^{-1}.

Manganese carbide ***($Mn_{15}C_4$), 10CI*** [12364-85-1]
C_4Mn_{15} M 872.1
The reported $Mn_{11}C_3$ was probably $Mn_{15}C_4.Mn_{15}C_4$ has also been considered to be Mn_7C_3. Synth. from Mn and graphite at 900-1000° in evacuated quartz ampoules for 12 h. Antiferromagnetic at 90-400K, ferromagnetic at higher temps., $\mu_{eff} = 4.01\mu_B$ suggesting the presence of Mn^{+0}. Hexagonal cryst. ΔG_f° −182 kJ mol^{-1} at 850°.

Manganese carbide ***(Mn_3C), 11CI*** [12121-90-3]
CMn_3 M 176.8
Struct. consist of sheets of corner and edge sharing trigonal CMn_6 prisms. Orthorhombic, isomorphous with Fe_3C. Synth. by heating the elements at *ca* 1300° for 3 h. Cheap Mn master alloy. Colour varies from yellow to silvery white. Hydrol. in H_2O to give H_2, CH_4, C_2H_6 and $Mn(OH)_2$. Mp *ca.* 1420°, Mp 1520°.
Antiferromagnetic, obeys Cure-Weiss law at 90-240K. At higher temps. becomes ferromagnetic. Upon hydrolysis a range of hydrocarbons is formed.

Manganese carbide ***(Mn_7C_3), 11CI*** [12071-17-9]
C_3Mn_7 M 298.7
Isomorphous with Pd_7B_3 and Fe_7C_3. Obt. by heating the elements at 700° in an evacuated quartz ampoule. Antiferromagnetic at 90-240K, ferromagnetic at higher temp. Monoclinic cryst. Readily reacts with O_2. A variety of hydrocarbons is formed upon hydrolysis. Mp *ca.* 1087°. ΔH_f° −69.96 kJ mol^{-1} for $2C_{sc} + 5Mn_{sc} \rightarrow Mn_7C_{3sc}$.

Manganese carbide ***(Mn_5C_2), 10CI*** [12076-37-8]
C_2Mn_5 M 420.5
Orthorhombic unit cell closely related to Ru_7B_3 and containing octahedra and tetrahedra of Mn atoms and C centred trigonal prisms. Most easily obt. manganese carbide from a melt since it is present in equilibrium with a Mn melt saturated with C. Can be prep. from the elements at 850° for 100h followed by heating to 1050° for 100h in evacuated quartz ampoules. Moisture and air-sensitive. Involatile up to 1025°. Mp 1150°. ΔG_f° −93.5 kJ mol^{-1}.

Manganese carbide ***(MnC), 10CI*** [12179-84-9]
CMn M 66.9
Does not exist as a stable crystalline compd. Amorphous MnC films have been obtained by sputtering pressed Mn—C mixtures at 77K.

Manganese carbide ***(MnC_2)*** [75718-05-7]
C_2Mn M 90.9
Hydrol. in H_2O giving H_2, CH_4 and C_2H_4.

Manganese carbide ***(Mn_2C_3)*** [75718-04-6]
C_3Mn_2 M 193.9
Orthorhombic, pseudohexagonal. Mp 1340°.

[12281-52-6, 12286-95-2, 12363-88-1, 12703-89-8, 37297-89-5, 39400-17-4, 60921-61-1, 112968-33-9, 114290-04-9]

$CMnO_3$ IC-002747

Manganese(*II*) carbonate ($MnCO_3$)
[Carbonato(2−)-O]manganese, 11CI
[598-62-9]

$MnCO_3$

M 114.9
Calcite type struct., rhombohedral. Synth. by reaction of $Mn(OAc)_2.4H_2O$ solns. or $Mn(OH)_2$ with super critical CO_2 at 180° and 1200 atm. CO_2. Precipitation from aq. Mn^{+0} by $CO_3^{2\ominus}$ or $HCO_3^\ominus$ does not give stoichiometric pure products since CO_2 pressures are not high enough. Such products are of the type $Mn(CO_3)_x(OH)_y(H_2O)_z$. Pink to almost white powder. Commercial precipitated $MnCO_3$ is often light brown due to oxidation. Sol. saturated aq. K_2CO_3. Magnetically ordered below Néel temp. T_N 32.14K. $\mu_{eff} = 6.26\mu_B$. Dec. at 250-300°.

Mineral-form [14476-12-1]
Rhodochrosite
Found in e.g. Colorado USA, Romania, eastern Germany, South Africa. Pale pink to deep red or orangish cryst.

[CMo] IC-002751

Molybdenum carbides
[12627-57-5]
Over 20 phases known.

Molybdenum carbide ***(Mo_6C)*** [12069-90-8]
CMo_6 M 587.6
Example of double carbide i.e. requires the integration of a second metal (e.g. Fe) to be stable. Obt. during treatment (tempering, quenching, annealing) of steels and alloys. Microconstituent and precipitant in steel and alloy matrices.

Molybdenum carbide ***($Mo_{2.2}C_x$)*** [12152-15-7]
$C_xMo_{2.2}$ M 2278.6
A double carbide. Formed during treatment of steels and alloys. Microconstituent and precipitant in steel and alloy matrices. Insol.

Molybdenum carbide ***(Mo_2C)*** [12069-89-5]
Molybdenum hemicarbide
CMo_2 M 203.8
Hcp array of Mo atoms, C atoms occupy half the octahedral holes between each pair of close packed layers. Synth. by many methods e.g. heating molybdenum powder and carbon black at about 1400-1500° under H_2. Used in cutting tools and other wear resistant surfaces, also in reactor and aerospace technology, owing to extreme hardness and high temp. stability. Oxidises on heating in air to MoO_3. Reacts with oxidising acids but not with dil. aq. alkali. Hard, electrical conductor exhibits superconductivity up to 2.9K. Insol. Mp 2687°.

Molybdenum carbide ***(MoC)*** [12011-97-1]
CMo M 107.9
Non-stoichiometric, possibly extending to Mo_3C_2 and lower; Mo_2C_2 also cited as alternative composition. Has a hexagonal lattice which resembles WC. Synth. by many methods e.g. heating Mo powder and carbon black at about 1400-1500° under hydrogen. Used in cutting tools and other wear-resistant surfaces, also in reactor and aerospace technology, owing to extreme hardness and high temp. stability. Oxidises on heating in

air to MoO_2 + CO_2. Reacts with oxidising acids but not dil. aq. alkali. Hard, electrical conductor, exhibits superconductivity, up to 7.9K. Insol. Mp 2692° prob. dec.

CNNa IC-002752

Sodium cyanide, 8CI

Cyanogran

[143-33-9]

NaCN

M 49.0

NaCl struct. Synth. by careful neutralisation of HCN with Na_2CO_3, $NaHCO_3$, or HCOONa. Manuf. by reaction of Na_2CO_3 and carbon with either N_2 or NH_3. Commercially available. Widely used in org. chem. for generation of C–C bonds. Colourless cubic cryst., deliquescent; undergoes cubic to hexagonal transition on cooling below 10.5°. V. sol. H_2O (48 g per 100 cm^3 at 10°; 82 g per 100 cm^3 at 35°); spar. sol. EtOH. Mp 562°. Bp 1496°. ΔH_f° −90.7 kJ mol^{-1}; ΔG_f° −80.4 kJ mol^{-1}; S° 118 JK^{-1} mol^{-1}.

▷ Highly toxic, irritant. VZ7525000.

CNNaO IC-002753

Sodium cyanate

Cyanic acid, sodium salt, 8CI

[917-61-3]

NaOCN

M 65.0

Synth. by reaction of $Hg(OCN)_2$ and NaI in Me_2CO. Manuf. by oxidation of NaCN at 500-600° with O_2 or by treatment of a sodium salt (Na_2S, Na_2CO_3, NaCN, Na_2SO_3) with CO_2 or COS and NH_3. Commercially available. Cyclocondensation agent. Assessed for use in the therapy of sickle cell anaemia. Colourless hexagonal cryst. Sol. H_2O (10.7 g per 100 cm^3 at 16°); spar. sol. Et_2O, C_6H_6. ΔH_f° −400 kJ mol^{-1}. Dec. on heating to form NaCN, Na_2CO_3, N_2 and CO or CO_2 depending on temp.

CNNaO IC-002754

Sodium fulminate

Fulminic acid, sodium salt, 8CI

[15736-98-8]

NaCNO

M 65.0

Synth. e.g. by shaking $Hg(CNO)_2$ with Na/Hg (3%) in absolute MeOH or EtOH under dry N_2. White salt. Readily (often explosively) dec. to form CO, N_2 and Na metal.

▷ Highly explosive: extreme caution must be exercised.

CNNaS IC-002755

Sodium thiocyanate

Thiocyanic acid, sodium salt, 8CI. Sodium sulfocyanate. Sodium rhodanide

[540-72-7]

NaSCN

M 81.0

Manuf. either by treatment of polysulfides (Na_2S_x) with NaCN or HCN or by heating NaSH with $(NH_2)_2CNCN$, or by reaction of sodium metal with thiourea. Commercially available. Used in thiocyanation reactions. Used in the electroplating industry and as a constituent of working fluids for energy storage and power generation. Aq. solns. are used in the final stages of the production of acrylic fibres. Colourless orthorhombic deliquescent cryst. V. sol. H_2O (139 g per 100 cm^3 at 21°; 225 g per 100 cm^3 at 100°); EtOH, Me_2CO. Mp 287°. ΔH_f° −174 kJ mol^{-1}.

[CNNb] IC-002756

Niobium carbide nitride

[12687-87-5]

A number of compositions is known chiefly as constits. of alloys rather than pure phases. Composition tends to be variable and is often not specified.

Niobium carbide nitride (NbCN), 11CI [12274-94-1]

CNNb M 118.9

Manuf. by heating Nb nitride to 800-1000° in a CH_4 atm.

Jr. Pat., 1 508 370, (1968); *C.A.*, **70**, 59391b (*manuf*)

Sweeney, J., *Appl. Polym. Symp.*, 1977, **31**, 23 (*supercond, use*)

CNOTi IC-002757

Titanium carbide nitride oxide (TiCNO), 11CI

[71330-01-3]

TiCNO

M 89.8

Synth. only as coating on cutting tools by heating in H_2 + CH_4 + $TiCl_4$ at 710° or in hydrocarbon + N_2 + NH_3 + CO at 900-1100° or by chemical vapour deposition on silon. Forms a hard, wear resistant coating on cutting tools.

CNOTl IC-002759

Thallium(I) cyanate

Thallium(I) isocyanate

TlNCO

M 246.4

Tetragonal, isomorphous with NaN_3. Obt. by mixing aq. solns. of NaNCO and TlOAc with addn. of EtOH. Predominantly ionic; diamagnetic. Sol. H_2O; sl. sol. EtOH.

▷ V. toxic.

Waddington, T.C., *J. Chem. Soc.*, 1959, 2499 (*struct, ir*)

CNRb IC-002760

Rubidium cyanide (RbCN), 8CI

[7073-56-4]

RbCN

M 111.4

Adopts NaCl-type struct. with disordered $CN^\ominus$ anions. Prepd. by addition of HCN mixed with C_6H_6 to RbOH dissolved in EtOH or similar non-aq. solv. Colourless cubic cryst. Hygroscopic. Moisture sensitive. Hydrol. to form either HCN and RbOH (< 50°) or NH_3 and HCOORb (> 80°). Transforms to a ferroelastically ordered monoclinic phase at −141°. Sol. H_2O; insol. EtOH, Et_2O. Mp 599°. ΔH_f° −117 kJ mol^{-1}.

▷ Highly toxic.

[CNTi] IC-002763

Titanium carbide nitrides

[12627-33-7]

There is a substantial literature on these phases which have indeterminate compositions. Rel. little is known about stoichiometric compositions.

Titanium carbide nitride (TiCN), 11CI [12347-09-0]

CNTi M 73.8

Synth. by laser melting TiC and TiN or from TiO_2 or $TiCl_4$ in an RF or microwave plasma.

Titanium carbide nitride (Ti_2CN), 11CI [12654-86-3]

$CNTi_2$ M 121.7

Orthorhombic. Identified in Ti/C steels.

Titanium carbide nitride (Ti_4CN_3), 11CI [37242-48-1]

CN_3Ti_4 M 245.5
Synth. by heating the product of the reaction between TiBr in liq. NH_3 and Na acetylide. Formed in some steels.

[CNV] IC-002765

Vanadium carbide nitrides

[37232-24-9]

These phases are generally only found as components of steel alloys. A general preparation involves heating V_2O_5 in a mixture of CH_4, N_2 or NH_3, and H_2 at 900-1100°. Important as alloying components in tool steel and other high performance steels. Also used in ceramic composite cutting tools.

Vanadium carbide nitride* (*VCN*), *11CI [12069-91-9]
CNV M 76.9
Formed during rolling of austenitised steel or during annealing of quenched low-C steels.

Vanadium carbide nitride* (V_2CN), *11CI [62997-24-4]
CNV_2 M 127.9
Formed during annealing of quenched low-C steel.

Vanadium carbide nitride* (V_3CN), *11CI [101658-43-9]
CNV_3 M 178.8
Formed by heating steel with KCNO and K_2CO_3 at >500°.

Austrian Pat., 329 100, (1976); *CA*, **85**, 128451v (*synth*)
Schwaab, P., *Arch. Eisenhuettenwes.*, 1977, **48**, 163; *CA*, **86**, 192997a (*formn*, *VCN and* V_2CN)

[CNZr] IC-002766

Zirconium carbide nitrides

[12713-24-5]

Several compositions known. These phases may be synth. from $ZrCl_4 + NH_3 + CH_2Cl_2$, by heating $ZrO_2 + C + N_2$ at 1300-1500° or by heating ZrC + ZrN + Zr at 1800-2000°. Very hard; used alone or as alloys in abrasives and cutting tools; potential use in diamond polishing. Tested for use in solar energy conversion.

Zirconium carbide nitride* (*ZrCN*), *11CI [12601-90-0]
CNZr M 117.2
Synth. from ZrO_2, C and N_2 at 1600° for 2 hrs. An abrasive; also implicated in the weakening of low-alloy Zr steels in nuclear reactors.

Klimashin, G.M. *et al*, *Izv. Akad. Nauk SSSR Neorg. Mat.*, 1972, **8**, 843; *CA*, **77**, 53346p (*synth*)

CNa_2O_3 IC-002771

Sodium carbonate (Na_2CO_3)

Carbonic acid, disodium salt, 8CI. Soda ash

[497-19-8]

Na_2CO_3

M 105.9
Manuf. by the Solvay process in which aq. NaCl is converted by reaction with CO_2 and NH_3, into $NaHCO_3$ which is calcined to give Na_2CO_3. Alternatively produced by thermal dec. of the mineral trona, $Na_2CO_3.NaHCO_3.2H_2O$. Commercially available. Used in the paper pulp, soap and detergent industries; its principal application is as raw material for the production of glass. White monoclinic powder, hygroscopic. Dec. on heating by CO_2 loss. Undergoes monoclinic (β) to monoclinic (α) transition at 361° and monoclinic (β) to hexagonal (α) transition at 489°. V. sol. H_2O (7.1 g per 100 cm^3 at 0°; 46 g per 100 cm^3 at 100°); spar. sol. EtOH; insol. Me_2CO. Mp 850°. ΔH_f° −1130.8 kJ mol^{-1}; ΔG_f° −1048.0 kJ mol^{-1}; S° 138.8 JK^{-1} mol^{-1}.

▷ Irritant. VZ4050000.

[CNb] IC-002772

Niobium carbides

The more important phases are NbC and Nb_2C. No reaction with water; v. hard.

***Niobium carbide* (Nb_2C)** [12011-99-3]
CNb_2 M 197.8
Hcp niobium with ordered occupation of octahedral sites by C. Synth. by heating Nb + C to 2000° in high vacuum.

***Niobium carbide* (Nb_3C_2)** [12334-39-3]
C_2Nb_3 M 302.7
Hexagonal. Synth. by arc-melting using Nb and C electrodes.

***Niobium carbide* (Nb_4C_3)** [12076-39-0]
C_3Nb_4 M 407.6
The metals are close packed in a 12 layer sequence. Synth. by arc-melting Nb.

***Niobium carbide* (*NbC*)** [12069-94-2]
CNb M 104.9
There is a wide range of stoichiometry for this material. Has NaCl struct. but superstructures are also observed. Synth. by reducing Nb_2O_5 or NbO_2 with C, from $NbCl_5$ and CH_4 in an Ar–H_2 plasma or from ferro alloy and C-black at 1700-2000° in a vacuum furnace. Used in a wide variety of abrasives and cutting tools, in ceramics etc. and is formed in many Nb-containing alloys.

***Niobium carbide* (NbC_2)** [12188-72-6]
C_2Nb M 116.9
Struct. unknown but may be similar to CaC_2. Formed by pyrolysis of polycyclic aromatic compds. in the presence of Nb.

[CNd] IC-002773

Neodymium carbides

Known phases include Nd_2C_3, NdC_2.

***Neodymium carbide* (NdC_2)** [12071-21-5]
C_2Nd M 168.2
Has CaC_2 struct. Brassy yellow solid. Mp 2340° dec. Dec. by H_2O, affording mainly C_2H_2 but also C_2H_4, C_2H_6 and other hydrocarbons. Undergoes α→β transition at 1150°. $\mu_{eff} = 3.53\mu_B$ (θ +40°). Antiferromagnetic (T_N 29K).

[CNi]

IC-002774

Nickel carbides

[12710-36-0]

Widely used as a catalyst, e.g. in the conversion of exhaust gas. Occurs in various formulations in solid solns. and phase systems with other metal carbides. The most common formulation is Ni_3C.

Nickel carbide (Ni_3C) [12012-02-1]

CNi_3 M 188.0

Fe_3C struct. Has cubic and hexagonal phases. Dark grey powder.

[12152-16-8, 12167-08-7, 12601-91-1, 37297-90-8, 52931-58-5, 94559-70-0, 107069-48-7]

$CNiO_3$

IC-002775

Nickel(III) carbonate ($NiCO_3$)

[3333-67-3]

$NiCO_3$

M 118.6

Structs. unknown. Synth. from Nickel(II) chloride ($NiCl_2$), IC-018717 + $CaCO_3$ at 150° in sealed tube. Light green solid.

▷ QR6200000.

Hexahydrate: Hellyerite

Synth. from Hexaaquanickel(II)(2+), IC-019897 + $NaHCO_3$, or obt. as mineral from old Lord Brassey nickel mine, Tasmania. Pale green or blue fine vitreous cryst.

Basic carbonate: [29863-10-3]. Nickel carbonate hydroxide. Basic nickel carbonate

Synth. from Hexaaquanickel(II)(2+), IC-019897 + Na_2CO_3. Commercially available; used to synth. other Ni compds. by reaction with acids; used in ceramic pigments. Approx. formula $Ni_4(OH)_6(CO_3)_2.4H_2O$. Also formulated as $2NiCO_3.3Ni(OH)_2.4H_2O$. Other undefined basic nickel carbonates known.

[CNp]

IC-002776

Neptunium carbides

Three main phases: Np_2C_3, NpC, NpC_2.

Neptunium carbide (Np_2C_3) [12347-28-3]

C_3Np_2 M 510.1

Isostruct. with Pu_2C_3, Am_2C_3. Ferromagnetic <109K.

Neptunium carbide (NpC) [12240-17-4]

CNp M 249.0

NaCl struct. Antiferromagnetic between 220-310K. Ferromagnetic below 220K (190K). $\mu_{eff} = 2.1\mu_B$ (6-150K).

Neptunium carbide (NpC_2)

C_2Np M 261.0

Tetragonal CaC_2 struct.

CO

IC-002777

Carbon monoxide

[630-08-0]

CO

M 28.0

Interatomic distance C—O 112.8 pm. Manuf. by partial oxidn. of hydrocarbon gases from natural gas, or gasification of coke and coal. Synth. from HCO_2H + H_2SO_4. Prod. in traces by algae and higher plants. Reducing agent, used in Fischer-Tropsch processes for petroleum-type products, manuf. of metal carbonyls. Carbonylates organoboranes. Commercially available. Odourless, tasteless, colourless gas. V. spar. sol. H_2O; sol. AcOH, MeOH, EtOH. Mp −213°. Bp −190°. Crit. point −114.1° (−138.7°)/35.9 atm. Readily absorbed by conc. solns. of Cu_2Cl_2 in aq. NH_3 or HCl. Exhaust gas, air pollutant.

▷ Highly toxic by inhalation. TLV 55. Extremely flammable, forms highly explosive mixtures with air. FG3500000.

Williams, E.J. et al, J. Mol. Struct., 1968, 2, 57 (theory)

[COTi]

IC-002781

Titanium carbide oxides

[12688-08-3]

Much work has been reported on Ti—C—O phases of indeterminate composition. Rather little is known of stoichiometric phases. All phases find their major use as coatings for cutting tools.

Titanium carbide oxide ($TiCO$), 11CI [12539-68-3]

COTi M 75.8

Synth. from TiC and TiO at 1500°. Component in anodes for Al electrowinning.

Titanium carbide oxide (Ti_2CO), 11CI [11086-75-2]

$COTi_2$ M 123.7

Ordered NaCl struct. over entire composition range. Synth. by heating TiC and TiO or by reaction of a mixture of $TiCl_4$, H_2, CO_2, CO and CH_4. Used to improve strength of sintered ceramic bodies.

Kamyshov, V.M. et al, Izv. Akad. Nauk SSSR Neorg. Mat., 1972, 8, 1185; CA, 77, 106261r (cryst struct, phase stability, Ti_2CO)

[COZr]

IC-002782

Zirconium carbide oxide, 11CI

[12651-47-7]

$ZrO_{0.15}C_{0.85}$

Non-stoichiometric with respect to C and O. Several phases known, with the NaCl struct. having vacancies on one or both sub-lattices in the composition range ZrC_xO_y where $x + y = 0.4$-0.5 and $y \leq 0.15$. These phases may be synthesised (a) on a Zr surface (b) by heating ZrO_2 + C black at 1250-1500°, (c) by heating ZrC + ZrO_2 + Zr *in vacuo* at 1800-2000°. Potential absorbers for solar energy systems.

CO_2

IC-002783

Carbon dioxide

Carbon oxide (CO_2). Carbonic anhydride

[124-38-9]

O═C═O ($D_{\infty h}$)

M 44.0

Final oxidation product of carbon. Forms part of the carbon cycle in nature Interatomic distance C—O 115.98 pm. Used in carbonation of beverages, manuf. of carbonates, fire prevention and extinction, propellant (aerosols), antiseptic in bacteriology and in frozen food ind. Respiratory stimulant. Commercially available in cylinders and as solid at −78°(Dry ice). Important in 'greenhouse effect' and photosynthesis. Colourless odourless gas. Reduced to CO by C or H_2. Dissociates above 2000° to CO + O_2. Spar. sol. H_2O, forming H_2CO_3. d 1.52(0) (air = 1). Mp −57° under 5 atm. Bp −78.2°, Bp −78.5°, Sublt. −78.46°. Liquifies at 20° under 50 atm. pressure. Aq. soln. is acid to litmus. Crit. point 31.3°/72.9atm. Triple pt. −56.6° at 5.11 atm.

▷ Solid causes skin burns. FF6400000.

IC-002785

CO_3Rb_2

Rubidium carbonate (Rb_2CO_3)

Carbonic acid, dirubidium salt, 8CI

[584-09-8]

Rb_2CO_3

M 230.9

Prepd. from aq. RbOH + CO_2 at 1000-2200 atm. and 200-400°. Alternatively an aq. soln. of RbOH, obtained by reaction of Rb_2SO_4 with $Ba(OH)_2$, is treated with $(NH_4)_2CO_3$. Commercially available. Catalyst for gasification of graphite. Dissolution in acids affords the corresp. Rb salts. Colourless monoclinic cryst.; deliquescent. Dec. on heating with CO_2 loss. V. sol. H_2O (450 g per 100 cm^3 at 20°). Mp 837° (> 1 atm). ΔH_f° −1136 kJ mol^{-1}; ΔG_f° −1051 kJ mol^{-1}; S° 181 J K^{-1} mol^{-1}.

▷ Irritant; corrosive.

IC-002786

CO_3Sr

Strontium carbonate ($SrCO_3$)

Carbonic acid, strontium salt, 8CI

[1633-05-2]

$SrCO_3$

M 147.6

Manuf. from celestite by treatment with either aq. Na_2CO_3 or aq. $(NH_4)_2CO_3$. Commercially available. Used in the synthesis of ternary oxides by reaction with transition metal oxides. Colourless orthorhombic cryst. Dec. on heating with CO_2 loss. Orthorhombic to hexagonal phase transition at 925°. Pract. insol. H_2O (0.0011 g per 100 cm^3 at 18°; 0.065 g per 100 cm^3 at 100°). Mp 1497° (65 atm.). ΔH_f° −1220.1 kJ mol^{-1}; ΔG_f° −1140.4 kJ mol^{-1}.

Mineral-form [14941-40-3]

Strontianite

Member of the aragonite ($CaCO_3$) group of minerals. Occurs as low temp. mineral as veins in limestones and marls. White or yellowish cryst.

CO_3Zn

Zinc carbonate ($ZnCO_3$)

[3486-35-9]

$ZnCO_3$

M 125.3

Calcite struct. Mineral formed on zinc during atmospheric corrosion. Used in deodorants; blowing agent; polym. catalyst; fireproofing agent; flame retardant; nutrient and feed supplement; filler and binder; pigment. Rhombohedral colourless cryst. Pract. insol. H_2O (5.7 × 10^{-5} g per 100 cm^3). Dec. at 140°. Forms a basic salt on boiling in H_2O.

▷ FG3375000.

Mineral-form

Smithsonite

Secondary mineral, often found as grape-like clusters, or crystalline crusts. Widespread occurrence. Trigonal cryst., rarely colourless, ranges from bright apple green to deep pink purple.

[CPu]

Plutonium carbides

[11116-02-2]

PuC_3, PuC_6, PuC_7, PuC_8 recently detected by ms; other main phases descr. here.

Plutonium carbide ***(Pu_3C_2)*** [12122-59-7]

C_2Pu_3 M 741.1

Obt. by annealing of arc-melted sample with 40 at. % C at 500°.

Plutonium carbide ***(PuC)***

Plutonium monocarbide

CPu M 251.0

Substoichiometric: PuC_{1-x}, usually approx. $PuC_{0.85}$, fcc struct. Synth. by arc melting of Pu-graphite mixtures in inert gas at 500°. Black solid. Attacked by hot H_2O. Mp 1654° (peritectic). Undergoes ferromagnetic ordering at 120K.

Plutonium carbide ***(Pu_2C_3)*** [12076-56-1]

Plutonium sequicarbide

C_3Pu_2 M 514.1

Bcc struct. in which all C present as C_2 groups. Synth. by carbothermic redn. of PuO_2 or from PuH_2 and C_3H_8 at 650-750°. Dull black solid. Mp 2050° (peritectic). ΔH_f° −83 kJ mol^{-1}.

Plutonium carbide ***(PuC_2)*** [12071-26-0]

C_2Pu M 263.0

Stable between ~ 1660 and 2230°. Has the CaC_2 struct. α- and β-forms exist. α-form is tetragonal, isomorphous with α-UC_2, β-form is cubic and stable above 1700°. Obt. by sintering of Pu_2C_3 with C at >1660°. Mp ~2250° (peritectic). Dec. to Pu_2C_3 + C <1750°.

CS_2V

IC-002804

Vanadium carbide sulfide (VCS_2), 11CI

[102790-28-3]

VCS_2

M 127.0

Formed on a V surface by successive ion implantation by S then C. Layers 1×10^5 - 2×10^5 pm deep are formed. Important as a cathode in non-aq. alkali metal batteries.

U.S. Pat., 4 576 697, (1986); *CA*, **105**, 9278r (*formn*)

CS_3Tl_2

IC-002805

Thallium(*I*) trithiocarbonate

$Tl_2(CS_3)$

M 516.9

Synth. from aq. $Tl^{\oplus}$ soln. and $Na_2CS_3.2H_2O$. Orange-red solid. Sol. H_2O (0.001 g per 100 cm^3), many polar and non-polar solvs. Dec. on heating to Tl_2S, CS_2, reacts with oxid. agents but stable to aq. alkalis and org. acids.

▷ Toxic.

Ingram, G., *J. Chem. Soc.*, 1957, 4328 (*synth, reactions*)

IC-002806

[CSc]

Scandium carbides

Scandium carbide ***(ScC)*** [12012-14-5]

CSc M 56.9

Catalyses *ortho/para* conversion of H_2. Grey-black solid. Forms mainly CH_4 on hydrol.

Scandium carbide ***(Sc_3C_4)***

C_4Sc_3 M 182.9

Metallic conductor. Moisture-sensitive light grey lustrous cryst. (black powder). Originally reported as $Sc_{15}C_{19}$. First carbide found to contain C_3 units. On hydrol. affords a mixture of C_{1-3} hydrocarbons.

***Scandium carbide* (ScC_2)** [12175-91-6]
C_2Sc M 68.9
Water-sensitive solid. On hydrol. affords ethyne etc.

[CTh]

Thorium carbides IC-002812
***Thorium carbide* (*ThC*)** [12012-16-7]
CTh M 244.0
Stoichiometry variable. Has NaCl type struct. with isolated C atoms. Moisture-sensitive solid. Mp 2625°. On hydrol. affords largely CH_4.
***Thorium carbide* (Th_2C_3)** [12151-76-7]
C_3Th_2 M 500.1
Synth. from Th + C at high pressure at 1200°. Moisture-sensitive solid. Superconductor below 4.1K. Studied as solid soln. with yttrium carbide.
***Thorium carbide* (ThC_2)** [12071-31-7]
C_2Th M 256.0
Exists in three cryst. forms: α (monoclinic) at r.t., β (bodycentred tetragonal) at 1430-1480°, γ (fcc) above 1480°. Cryst. forms differ in orientation of C_2 groups - fixed in α-form, disordered in 2D in β-form, 3D disordered in γ-form. Studied as fuel for fast breeder reactors. Moisture-sensitive yellow solid. Mp 2655°. Bp *ca.* 5000°. Dec. by H_2O. On hydrol. affords mainly C_2H_2, C_2H_6 + H_2.

CTi

Titanium carbide (TiC), 11CI
[12070-08-5]

TiC

M 59.8
At least 17 phases have been reported but only TiC has been studied in detail. TiC has an homogeneity range down to at least $Ti_{0.76}C$. Has the NaCl struct. which is retained in non-stoichiometric phases. There is an order⇌disorder transition at 760-790°. Synth. and manuf. involve reactions of Ti and C usually at high temps. eg. Ti + C black at 1800-2500°. Has a wide range of uses from abrasives and cutting tools to ceramics and anodes for Al refining. Mp 3137°.

[CU]

Uranium carbides
[12612-73-6]
Three main phases, UC, U_2C_3, UC_3 known. U/Pu/C mixtures are potential fast breeder fuels.
▷ All three phases become pyrophoric when powdered.
***Uranium carbide* (*UC*)** [12070-09-6]
CU M 250.0
Possesses the NaCl struct. Reactor fuel of high potential owing to high fissionable material density and good conductivity. Bright grey black solid with metallic shine. Mp 2500°. Bp *ca.* 4400° (extrap.). On hydrol. affords largely CH_4 + other alkanes. Metallic conductor. Paramagnetic (below r.t. virtually temp. independent).
***Uranium carbide* (U_2C_3)** [12076-62-9]
C_3U_2 M 512.0
Isostructural with Pu_2C_3. Synth. by UC/UC_2 fusion at 1200-1800°: cannot be obt. by direct U-C fusion. Black solid with metallic lustre. Affords various alkanes on hydrol. Antiferromagnetic at low temps. (T_N = 57-59°) Curie-Weiss behaviour between 70-550K.
***Uranium carbide* (UC_2)** [12071-33-9]
C_2U M 262.0
Exists in α and β-forms. α-form has CaC_2 struct. β-form stable >1770° has KCN struct. Paramagnetic to 0K (near-temp. independent). Light grey metallic cryst. Dec. by H_2O. Mp 2500°. Bp 4370°. At 700° with H_2→UC + CH_4. On hydrol. forms CH_4, C_2H_6, H_2 + other hydrocarbons.

[CV] IC-002816

Vanadium carbides

[11130-21-5]

Two well-characterised phases are known and at least 14 others. Most work has been done with components in alloys rather than with single substances. The major importance of these compds. is in their formation in alloy steels and in ceramics.

Vanadium carbide (V_2C) [12012-17-5]

CV_2 M 113.8

Struct. comprises hcp V with C in octahedral sites in an ordered defect struct. (ε—Fe_2N struct.). V_6C_5 and V_8C_7 are also ordered defect structs. based on an NaCl lattice. Synth. by heating the elements or manuf. by heating $VO(OH)_2$ and C under Ar in an induction furnace.

Vanadium carbide (V_4C_3), ***9CI*** [12076-63-0]

C_3V_4 M 239.7

12 Layer close packed V metal struct. with C disordered amongst O_h sites. Synth. by hot pressing V + C in graphite dies.

Vanadium carbide (V_6C_5), ***9CI*** [12181-74-7]

C_5V_6 M 491.6

NaCl struct. with perfect spiral array of defects on the C sub-lattice. Synth. by heating pellets of V + C for 100 h at 1650°.

Vanadium carbide (*VC*) [12070-10-9]

CV M 62.9

NaCl-type struct. Synth. from V_2O_5 and C in an Ar plasma or by heating ferrovanadium, V and C black to 1700-2000° in a vacuum induction furnace. Not hydrol. unlike most interstitial carbides.

[CW] IC-002817

Tungsten carbides

[11130-73-7]

Tungsten carbide (W_2C), ***9CI*** [12070-13-2]

CW_2 M 379.7

Exists in two allotropic forms. (i) hexagonal, stable up to 2000° (ii) ccp with NaCl struct. Synth. by sintering stoichiometric amounts of W and C. Commercially available. Black cryst. with a hardness approaching that of diamond. Mp 2860°. Various substoichiometric phases known for W_2C_n where $0.76 \leqslant n \leqslant 1$.

Tungsten carbide (*WC*) [12070-12-1]

CW M 195.8

Layer struct. with alternating W and C with metal metal bonds within layers. Synth. e.g. by heating finely divided W + carbon to *ca.* 2200°. Commercially available. Most important phase in cemented carbides, crucibles, dyes, furnace parts etc. Approx. 15,000-18,000 metric tons produced annually. Solid with metallic lustre. Electrical conductor. Insol. Mp >2755° dec. Various compositions known for WC_n where $0.41 \leqslant n \leqslant 1$.

[CZr] IC-002820

Zirconium carbides

[51680-56-9]

Several carbides have been reported but only ZrC has been extensively studied.

Zirconium carbide (Zr_2C), ***11CI*** [12179-95-2]

CZr_2 M 194.4

Defect NaCl struct. No evidence for ordering of defects in the stoichiometric phase. Synth. by heating Zr and C.

Zirconium carbide (ZrC), ***11CI*** [12070-14-3]

CZr M 103.2

NaCl struct. Manuf. by reducing $ZrSiO_4$ with C in an electric furnace. Synth. by condensing Zr vapour on graphite at 1700° or heating ZrO_2 and graphite to 2200° at 500 atm. Used chiefly in abrasives and cutting tools.

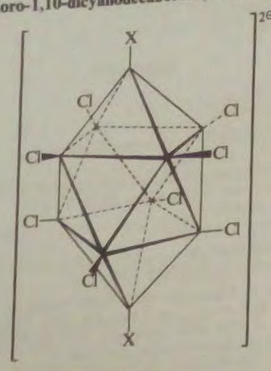
$C_2B_{10}Cl_8N_2^{2\ominus}$

Octachloro-1,10-dicyanodecaborate(2−), 8Cl



X = CN

M 443.7 (ion)

Di-Cs salt:
$C_2B_{10}Cl_8Cs_2N_2$ M 709.5
Colourless cryst. (hot H_2O). Sol. H_2O, MeCN.

Bis-Me_4N salt: Colourless cryst. (aq. MeCN/EtOH). Sol. MeCN.

Trofimenko, S. *et al, J. Am. Chem. Soc.*, 1965, **87**, 653; 1966, **88**, 1899 (*synth, ir, B-11 nmr*)

IC-002828

$C_2B_{10}Cl_8N_2O_2^{2\ominus}$

Octachloro-1,10-bis(isocyanato)decaborate(2−), 8Cl

As Octachloro-1,10-dicyanodecaborate(2−), IC-002827 with

X = NCO

M 475.7 (ion)

closo-.

Bis-Me_4N salt: Colourless solid. Sol. MeCN; spar. sol. EtOH. Mp > 400°.

Knoth, W.H. *et al, J. Am. Chem. Soc.*, 1967, **89**, 4842 (*synth, uv*)
U.S. Pat., 3 390 966, (1968); *CA*, **69**, 44973 (*synth, uv, ir*)

IC-002829

C_2BaMgO_6

Barium magnesium carbonate ($BaMg(CO_3)_2$)

Magnesium barium carbonate. Carbonic acid, barium magnesium salt (2:1:1), 8CI

[52969-83-2]

$BaMg(CO_3)_2$

M 281.6

Synth. e.g. by reaction of the constit. carbonates at 500° and 15 × 10^3 atm. Colourless hexagonal cryst.

Mineral-form

Norsethite

Isotypic with calcite. Found in USA, USSR and Namibia. Clear to milky white circular plates or rhombohedral cryst.

Chang, L.L.Y., *Am. Mineral.*, 1964, **49**, 1142 (*synth*)
Hood, W.C. *et al, Am. Mineral.*, 1974, **59**, 471 (*synth*)

IC-002830

$C_2BaN_2S_2$

Barium thiocyanate

Thiocyanuric acid, barium salt, 8CI

[2092-17-3]

$Ba(NCS)_2$

M 253.4

Prep. either by reaction of $[NH_4]SCN$ with $Ba(OH)_2.8H_2O$ or by slow neutralisation of $BaCO_3$ with aq. HSCN. Cryst. as trihydrate which gives anhydrous $Ba(SCN)_2$ on drying in air. Reagent for converting metal sulfates to thiocyanates. White solid, highly hygroscopic. V. sol. H_2O; sol. Me_2CO, MeOH, EtOH.

Dihydrate: [5908-82-7].
$C_2H_4BaN_2O_2S_2$ M 289.5
Incorrectly formulated; structural analysis has shown this species to be the trihydrate.

Trihydrate: [68016-36-4].
$C_2H_6BaN_2O_3S_2$ M 307.5
Commercially available. Colourless monoclinic cryst., deliquescent. Dec. on heating with H_2O loss. Sol. H_2O (4.3 g per 100cm^3 at 20°); v. sol. EtOH (35g per 100 cm^3 at 20°).

▷ Irritant.

IC-002831

C_2BaO_4

Barium oxalate (BaC_2O_4)

Ethanedioic acid, barium salt, 9CI. Oxalic acid, barium salt, 8CI

[516-02-9]

$Ba(C_2O_4)$

M 225.3

Synth. by reaction of $BaCl_2$ and either sodium oxalate or oxalic acid in aq. soln. Cryst. as dihydrate. Thermal dec. yields the anhydrous material. White powder. Dissolves in acids. Dec. on heating with $BaCO_3$ formn. Prac. insol. H_2O (0.0093 g per 100 cm^3 at 18°; 0.023 g per 100 cm^3 at 100°); insol. EtOH.

Hemihydrate: [18581-89-0].
Prepd. by partial dehydration of the dihydrate. Colourless cryst. Dec. on heating with H_2O loss.

Monohydrate: [13463-22-4].
Prepd. by partial dehydration of the dihydrate. Colourless monoclinic cryst. Dec. on heating with H_2O loss.

Dihydrate: [18581-91-4].
Cryst. from soln. formed by mixing aq. $BaCl_2$ with either aq. sodium oxalate or aq. oxalic acid. Colourless monoclinic cryst. Dec. on heating with H_2O loss to form the lower hydrates and then the anhydrous compd.

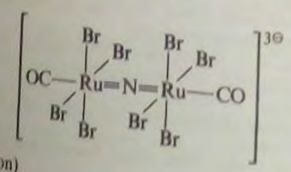
$C_2Br_8NO_2Ru_2^{3\ominus}$
Octabromodicarbonyl-μ-nitridodiruthenate(*IV*)(3−)
μ-Nitridobis[(carbonyl)tetrabromoruthenate(IV)]
[42735-82-0]



M 911.3 (ion)

Sol. aq. HBr.
Tri-Cs salt: Prepd. by treating $[Ru_2NBr_8(OH_2)_2]^{3\ominus}$ in conc. HBr with CO. Yellow-brown salt; diamagnetic. Ir ν_{CO} 2022 cm^{-1}.
Griffith, W.P. *et al, J. Chem. Soc., Dalton Trans.*, 1973, 1315 (*synth, ir*)

IC-002849

C_2Ca
Calcium carbide (CaC_2), 8CI
Calcium acetylide
[75-20-7]

M 64.1 CaC_2
Structural prototype. Obt. by direct reaction of Ca metal (or CaO) with carbon in an electric furnace; or by reaction of CaH_2 or Ca_3N_2 with carbon. Thermal dec. of calcium cyanamide alone or with carbon in high vacuum also affords CaC_2. Used for production of acetylene by reaction with H_2O. Agent for the desulfurisation of cast iron. Component of fluxes for the dephosphorisation and desulfurisation of stainless steels. Commercially available (80%). Moisture-sensitive. Mp 2300° (extrap). ΔH_f° −60 kJ mol^{-1}; ΔG_f° −65 kJ mol^{-1}; S° 70 J K^{-1} mol^{-1}. Undergoes tetragonal to cubic transition at 450°. Hydrol. in H_2O with formn. of $Ca(OH)_2$ and evolution of C_2H_2. Dissociates to constituent elements at v. high temp. (>2000°).
▷ Flammable; corrosive. EV9400000.

IC-002850

C_2CaMgO_6
Calcium magnesium carbonate ($CaMg(CO_3)_2$)
Carbonic acid, calcium magnesium salt (2:1:1), 8CI
[7000-29-5]

$CaMg(CO_3)_2$
M 184.4
Manuf. from the ore by traditional extraction techniques. Prepd. by hydrothermal synth. from either mixtures of $MgCl_2$ and $CaCl_2$ with $(NH_4)_2CO_3$ or mixtures of $MgCO_3$ and $CaCO_3$. Addition of organics such as urea, biuret or ethylenediamine reduces the temp. required for complete reaction. Cement additive for the manuf. of high strength concrete. Also used for the production of fire-resistant building and coating materials. White powder. Dec. on heating with CO_2 loss to form MgO and CaO. Dissolves in acids forming Ca and Mg salts. Prac. insol. H_2O. ΔG_f° −2144 kJ mol^{-1}.
Mineral-form [16389-88-1]
Dolomite

Occurrence widespread. Saddle-shaped cryst., aggregates white, greyish, greenish, pale brown pinkish rhombohedra.

[17069-72-6]

C_2CaMnO_6 IC-002851

Calcium manganese(*II*) carbonate ($CaMn(CO_3)_2$)

$CaMn(CO_3)_2$

M 215.0

Occurs in the $CaCO_3/MnCO_3$ system. Prepd. from equimolar mixture of $CaCO_3$ and $MnCO_3$ in a sealed bomb at ~700° and 970 atm. CO_2. Also formed from equimolar amounts of $Mn^{2\oplus}$ and $Ca^{2\oplus}$ in H_2O with excess $(NH_4)_2CO_3$. Synthetic product disordered.

Mineral-form [18616-69-8]
Kutnohorite. *Kutnahorite*
Has ordered struct. related to dolomite. Occurs in USA, Europe (Tuscany, Switzerland, Czechoslovakia), Mexico, Australia, Japan. Pale pink translucent cryst.

$C_2CaN_2S_2$ IC-002852

Calcium thiocyanate

Thiocyanic acid, calcium salt, 8CI

[2092-16-2]

$Ca(NCS)_2$

M 156.2

Only known as the hydrates or in aq. soln. Attempted synth. in anhyd. solvs. (e.g. reaction of Ca metal with AgNCS in liq. NH_3) gives mixtures of CaS and $Ca(CN)_2$. Aq. solns. synth. by neutralisation of $CaCO_3$ with aq. soln. of HNCS or $[NH_4]NCS$. Cryst. as the tetrahydrate. Attempted dehyd. results in thermal dec. Aq. solns. containing $Ca(NCS)_2$ act as cement setting accelerators. Also used to solubilise cellulose in aq. soln. V. sol. H_2O; sol. MeOH, EtOH.

▷ XK8540000.

Trihydrate: [5892-22-8].
$C_2H_6CaN_2O_3S_2$ M 210.2
Obt. by dehyd. of the tetrahydrate over conc. H_2SO_4 or *in vacuo* over P_2O_5. Deliquescent white cryst. V. sol. H_2O, EtOH.

Tetrahydrate: [65114-14-9].
$C_2H_8CaN_2O_4S_2$ M 228.3
Cryst. from aq. solns. of CaSCN. V. sol. H_2O (150 g per 100 cm^3 at 25°; 173 g per 100 cm^3 at 50°).

C_2CaO_4 IC-002853

Calcium oxalate

Calcium ethanedioate. Ethanedioic acid, calcium salt, 9CI. Oxalic acid, calcium salt, 8CI

[563-72-4]

$Ca(C_2O_4)$

M 128.0

Exists in 3 modifications which interconvert at 250-370° ($\alpha \rightarrow \beta$) and 410° ($\beta \rightarrow \gamma$). Prepd. either by thermal dec. of calcium formate at 400° or by dehyd. of its hydrates at 200-300°. Commercially available as hydrate. The hydrates are of considerable medical interest since they occur in renal and urinary calculi. White powder. Dec. on heating with CO and CO_2 loss forming $CaCO_3$ at 410-475° and CaO at 860°. Dissolves in acids. Prac. insol. H_2O (6.7×10^{-4} g per 100 cm^3 at 13°; 1.4×10^{-3} g per 100 cm^3 at 95°); insol. AcOH. ΔH_f° −1361 kJ mol^{-1}.

Monohydrate: [14488-96-1]. ***Whewellite***
$C_2H_2CaO_5$ M 146.1
Prep. by reaction of $CaCl_2$ with aq. $H_2C_2O_4$. Also found as mineral in Germany, Italy, USSR and elsewhere. Formed in human urine and found in renal and urinary calculi and as an intracellular deposit in plants. Colourless monoclinic cryst. Dec. on heating with H_2O loss at 235° to form anhyd. calcium oxalate. Prac. insol. H_2O. ΔH_f° −1675 kJ mol^{-1}; ΔG_f° −1514 kJ mol^{-1}; S° 157 J K^{-1} mol^{-1}.

Dihydrate: [7236-42-2]. ***Weddellite***
$C_2H_4CaO_6$ M 164.1
Found as mineral in oceanic bottom sample from Antarctica. Also formed in human urine and found in renal and urinary calculi. Capable of absorbing up to $\frac{1}{2}$ mole of zeolitic water. Colourless tetragonal cryst.; mineral, tan, yellowish brown to brown due to org. impurities. Dec. on heating with H_2O loss at 120° to form whewellite and with CO and CO_2 loss to form $CaCO_3$ and CaO. Prac. insol. H_2O. ΔH_f° −1968 kJ mol^{-1}; ΔG_f° −1750 kJ mol^{-1}.

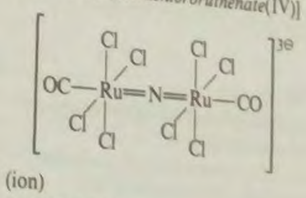
Dicarbonyloctachloro-μ-nitridodiruthenate(3−), 9Cl

μ-Nitridobis[(carbonyl)tetrachlororuthenate(IV)]



M 555.7 (ion)

Tri-Cs salt: [42735-81-9].
$C_2Cl_8Cs_3NO_2Ru_2$ M 954.5
Prepd. by treating $[Ru_2NCl_8(OH_2)_2]^{3\ominus}$ in conc. HCl with CO, followed by CsCl. Brown salt; diamagnetic. Sol. aq. HCl. Ir ν_{CO} 2038; ν_{Ru_2N} 1016 cm^{-1}.

Griffith, W.P. *et al, J. Chem. Soc., Dalton Trans.*, 1973, 1315 (*synth, ir*)

$C_2Cl_{10}NRe^{\ominus}$ IC-002899

Pentachloro[1,1,2,2,2-pentachloroethanaminato(2−)]rhenate(V)(1−), 10Cl

$[Cl_3CCCl_2N{\equiv}ReCl_5]^{\ominus}$

M 578.7 (ion)
Ir $\nu_{N\equiv C}$ 1241 cm^{-1}.
Ph_4As salt: [76130-52-4].
Synth. from $[Re(NC_2Cl_5)Cl_4(POCl_3)]$ and $AsPh_4Cl$ in CH_2Cl_2.

Dehnicke, K. *et al*, *Z. Anorg. Allg. Chem.*, 1980, **469**, 45 (*synth, ir, struct, props*)

$C_2Cl_{10}NW^{\ominus}$ IC-002900

Pentachloropentachloroethylimidotungstate(V)
Pentachloro[1,1,2,2,2-pentachloroethanaminato(2−)]tungstate(V)(1−), 10Cl

$[Cl_3W{\equiv}N{-}CCl_2CCl_3]^{\ominus}$

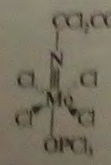
M 576.4 (ion)
W is six coordinate with W≡N 168 pm. Imide ligand exerts *trans*-influence: W—Cl_{trans} 242, W—Cl_{cis} 233 pm.
Ph_4As salt: [72902-16-0].
Synth. by action of $AsPh_4Cl$ on $POCl_3$ adduct of $Cl_3W{\equiv}NCCl_2CCl_3$. Red cryst. (MeCN). Less hygroscopic than starting material. Almost insol. CCl_4. Mp 205° (sealed tube). Ir $\nu_{W\equiv N}$ 1268 cm^{-1}.

Weiher, U. *et al*, *Z. Anorg. Allg. Chem.*, 1979, **457**, 105 (*cryst struct, ir, synth*)

$C_2Cl_{12}MoNOP$ IC-002901

Tetrachloro(pentachloroethylimido)(phosphoryl trichloride)molybdenum(V)
Tetrachloro[1,1,2,2,2-pentachloroethanaminato(2−)](phosphoryl chloride-O)molybdenum(VI), 10Cl

[72451-93-5]



M 606.3
trans-Octahedral. Interatomic distances: Mo—N 169.2; Mo—O 221.7; Mo—Cl 229.6, 231.3, 231.8, 230.6pm. Synth. from $MoCl_5$ in $POCl_3$ + ClCN + Cl_3CCN. Green needles.

Dehnicke, K. *et al*, *Z. Anorg. Allg. Chem.*, 1979, **456**, 71 (*cryst struct, synth, ir*)

$C_2Cl_{12}NOPRe$ IC-002902

Tetrachloro(pentachloroethylimido)(phosphoryl trichloride)rhenium(V)
Tetrachloro[1,1,2,2,2-pentachloroethanaminato(2−)](phosphoryl chloride-O)rhenium(VI), 10Cl

[73016-80-5]

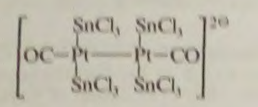
M 696.6
Octahedral.
trans-form
Interatomic distances: Re≡N 169, Re—O 218, Re—Cl 231.0 pm. Synth. from $ReCl_5$ dissolved in $POCl_3$ with CCl_3CN in the presence of Cl_2. V. hygroscopic, ochre-coloured cryst. Easily sol. $POCl_3$, CH_2Cl_2, $CHCl_3$, CCl_4.

Weiher, U. *et al*, *Z. Anorg. Allg. Chem.*, 1979, **457**, 115 (*synth, cryst struct*)

$C_2Cl_{12}O_2Pt_2Sn_4^{2\ominus}$ IC-002903

Dicarbonyltetrakis(trichlorostannyl)diplatinate(2−), 11Cl

[102482-07-5]



M 1151.3 (ion)
Not isol. Obt. in soln. with $Bu_4N^{\oplus}$ as counterion.

Herbert, I.R. *et al*, *Inorg. Chim. Acta*, 1986, **112**, 29 (*synth, cmr, Sn-119 nmr, Pt-195 nmr*)

$C_2CoINO_3^{\ominus}$ IC-002904

Dicarbonyliodonitrosylcobaltate(1−), 8Cl

$[CoI(CO)_2NO]^{\ominus}$

M 271.8 (ion)
Reacts with benzyl halides to give benzaldoxime, PhCH=NOH.
Tetrabutylammonium salt: [33361-05-6].
Violet solid. Mp 73-75°. Ir ν_{CO} 2011, 1943, ν_{NO} 1712 cm^{-1} (diglyme).

Foa, M. *et al*, *J. Organomet. Chem.*, 1971, **30**, 123 (*synth, ir*)

C_2CoN_2 IC-002905

Cobalt(II) cyanide ($Co(CN)_2$)

[542-84-7]

$Co(CN)_2$

M 110.9
Struct. unknown. Blue cryst. powder. Insol. H_2O; sol. aq. KCN, aq. NH_3.
Dihydrate: [20427-11-6].
Pink solid.
Trihydrate: Red-grey powder. Sol. aq. KCN. Mp 250°.

Sidgwick, N.V. *et al*, *The Chemical Elements and their Compds.*, Oxford, 1950, 1380 (*synth, props*)

$C_2CuN_3^{\ominus}$ IC-002911

Bis(cyano-C)cuprate(1−), 9Cl
Dicyanocuprate(1−)

[13682-73-0]

$[Cu(CN)_2]^{\ominus}$

M 115.5 (ion)
The anion forms helical chains with each copper atom 3-coordinate.
▷ GS2168900.
K salt: Copper potassium cyanide ($CuK(CN)_2$). *Cuprous potassium cyanide*
C_2CuKN_2 M 154.6
Used in electroplating. Cryst. (KCN aq.). Spar. sol. H_2O.

Basset, H. *et al*, *J. Chem. Soc.*, 1924, 1660.
Staritzky, E. *et al*, *Anal. Chem.*, 1956, **28**, 419 (*synth, cryst struct*)

IC-002917

C_2F_2

Difluoroacetylene
Difluoroethyne, 9CI
[689-99-6]

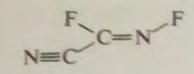
$FC{\equiv}CF$

M 62.0
Gas. Bp −15°. Polym. rapidly at r.t.
U.S. Pat., 2 831 835, (1958); *CA*, **52**, 14658f (*synth, props*)
Brahms, J.C. *et al, J. Am. Chem. Soc.*, 1989, **111**, 8940 (*synth, ir*)

IC-002918

$C_2F_2N_2$

Fluoro(fluoroimino)acetonitrile
Fluorocarbonocyanidimidic fluoride, 9CI
[14544-82-2]



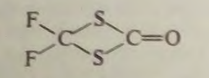
(Z)-form

M 90.0
Formed from N_2F_4 + $CFH{=}CH_2$ + CsF at 80° (via $F_2NCHFCH_2NF_2$). Colourless volatile liq.; isomers separated by glc.
Marsden, H.M. *et al, Inorg. Chem.*, 1987, **26**, 169 (*synth, ir, ms, F-19 nmr*)

IC-002919

$C_2F_2OS_2$

4,4-Difluoro-1,3-dithietan-2-one, 10CI
2,2-Difluoro-4-oxo-1,3-dithietane
[62982-88-1]



M 142.1
Minor product from reaction of 2,2,4,4-tetrachloro-1,3-dithietane + SbF_3. Colourless cryst. Mp 86°.
Diderrich, G. *et al, Chem. Ber.*, 1977, **110**, 916 (*synth, ir, F-19 nmr*)

IC-002920

$C_2F_3LiO_2$

Lithium trifluoroacetate
Lithium trifluoroethanoate. Trifluoroacetic acid, lithium salt, 8CI. Trifluoroethanoic acid, lithium salt
[2923-17-3]

$LiOOCCF_3$

M 119.9
Synth. from aq. Li_2CO_3 + F_3CCOOH. H_2O is removed initially by heating *in vacuo* using a steam bath and finally by azeotropic distillation using excess C_6H_6. Commercially available. When mixed with poly(ethylene oxide) it forms thin polymer electrolyte films which exhibit ionic conductivity. White powder.
▷ Irritant.

Bis(trifluoromethanesulfonato)nickel(*II*)

Nickel(II) *triflate*

[60871-84-3]

$Ni(O_3SCF_3)_2$

M 356.8
Polymeric struct. with octahedral Ni. Prepd. by dehydration of $[Ni(H_2O)_6]^{2\oplus}$ $2CF_3SO_3^{\ominus}$. Yellow solid. Many complexes known, particularly with N ligands. Paramagnetic.

Janski, M.T. *et al, J. Inorg. Nucl. Chem.*, 1979, **41**, 1707 (*synth, uv, magnetism*)

$C_2F_6O_3$ IC-002939

Bis(trifluoromethyl) trioxide

[1718-18-9]

$F_3COOOCF_3$

M 186.0
Synth. from F_2CO + F_2O. Colourless gas. Stable in glass at 25°. Mp −138°. Bp −16°. Slowly hydrol. by H_2O. Dec. at 70° to O_2 + $(F_2C)_2O_2$.
▷ Highly toxic.

Inorg. Synth., 1970, **12**, 312 (*synth, F-19 nmr, ir*)

$C_2F_6O_6S_2Zn$ IC-002940

Bis(trifluoromethanesulfonato)zinc

Zinc trifluoromethylsulfonate. Zinc triflate

[54010-75-2]

$Zn(OSO_2CF_3)_2$

M 363.5
In aq. soln., the cation exists as $[Zn(OH_2)_6]^{2\oplus}$. Catalyst for dimerisation of acrylonitrile; for ethoxylation of butanol by ethylene oxide and for cationic polym. Solid + $2H_2O$ (H_2O). Sol. MeOH, EtOH, MeCN, DMF, formamide. The dihydrate is dehydrated at 120° at 0.2 mm. Stable up to 60°.

(2-Bromoethenyl)pentafluorosulfur
2-Bromovinylsulfur pentafluoride. 1-Bromo-2-(pentafluorothio)ethene
[58636-82-1]

$BrCH{=}CHSF_5$

M 233.0
Formed from F_5SBr + $CH{\equiv}CH$ at 57°. Colourless liq. Bp 86°.

Canich, J.M. *et al, Inorg. Chem.*, 1985, **24**, 3668 (*synth, ir, F-19 nmr, ms*)

$C_2H_2CaO_4$ IC-002995

Calcium formate
Calcium methanoate. Formic acid, calcium salt, 8CI. Methanoic acid, calcium salt
[544-17-2]

$Ca(OOCH)_2$

M 130.1
Synth. from $CaCl_2$ + formic acid; or by reaction of CO with a calcium compd. ($Ca(OH)_2$, $CaCO_3$, CaS) in the presence of H_2O. Colourless orthorhombic cryst. Also exists in several other polymorphic forms. V. sol. H_2O (16.2 g per 100 cm^3 at 0°; 18.4 g per 100 cm^3 at 100°); insol. EtOH. Thermal dec. gives $CaCO_3$ via CaC_2O_4 with evolution of CO and H_2.

▷ LQ5600000.

$C_2H_2CdO_4$ IC-002996

Cadmium formate
[4464-23-7]

$Cd(OOCH)_2$

M 202.4
In solid state Cd is 7-coord.; two different formates; (i) tridentate and (ii) quadridentate. Synth. from $CdCO_3$ and aq. HCOOH at *ca.* 77°. Catalyst for CO_2/ethylene oxide reaction. Colourless cryst. Sol. H_2O (~6.7 g per 100 cm^3 at 50°).
Dihydrate: [51006-62-3].
Synth. from CdO and aq. HCOOH. Cryst. Dehydrates in 2 stages at 67-83° and 90-112°. Struct. contains two different octahedral CdO_6 environments: Cd(1) ($4OH_2$ + 2 formate-*O*), Cd(2) (6 formate-*O*).

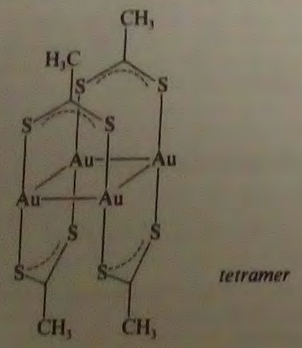
M 344.3
Orange-yellow cryst. (MeCN).

Kharasch, M.S. *et al*, *J. Am. Chem. Soc.*, 1934, **56**, 2057 (*synth, rev*)
Belli Dell'Amico, D. *et al*, *Gazz. Chim. Ital.*, 1973, **103**, 1099 (*synth, nmr*)

$C_2H_3AuS_2$ IC-003044

(Dithioacetato)gold(*I*)
Gold(I) *dithioacetate. (Ethanedithioato)gold*



tetramer

M 288.1
Tetrameric.
Tetramer: [74165-53-0]. *Tetrakis[μ-(ethanedithioato-S:S')] tetragold, 10CI*
$C_8H_{12}Au_4S_8$ M 1152.5
Air-stable cryst. (CS_2). Mean Au—Au distance 301 pm.

Piovesana, O. *et al*, *Angew. Chem., Int. Ed. Engl.*, 1980, **19**, 561 (*synth, cryst struct*)

$C_2H_3Br_4NORe^{\ominus}$ IC-003045

(Acetonitrile)tetrabromooxorhenate(*V*)(1−)

$[O{=}ReBr_4(NCCH_3)]^{\ominus}$ (C_{4v})

M 562.8 (ion)
Octahedral. Acetonitrile complex of Tetrabromorhenate(*V*) (1−), IC-002051.

trans-form
Interatomic distances: Re=O 173, Re—N 231, Re—Cl (mean) 248 pm.

Ph_4As salt: Synth. by recryst. of Ph_4As [$ReOBr_4$] from MeCN. Red cryst. (MeCN).

Cotton, F.A. *et al*, *Inorg. Chem.*, 1966, **5**, 9, 416 (*synth, props, cryst struct*)

$C_2H_3Br_5NOs^{\ominus}$ IC-003046

(Acetonitrile)pentabromoosmate(*IV*)(1−)
Pentabromo(ethanenitrile)osmate(IV)
[63985-25-1]

$[OsBr_5(NCCH_3)]^{\ominus}$

M 630.7 (ion)
Presumed octahedral.
K salt: [63984-67-8].
Synth. by irradiation of a soln. of $K_2[OsBr_6]$ in MeCN.
Et_4N salt: [86365-52-8].
Synth. from $[Et_4N]_2[OsBr_4]$ and PbO_2 in MeCN at r.t.
Tetrabutylammonium salt: [63985-26-2].
Synth. by irradiation of a soln. of $[Bu_4N]_2[OsBr_6]$ in MeCN.

Hasenpusch, W. *et al*, *Z. Anorg. Allg. Chem.*, 1977, **432**, 107 (*synth*)
Magnuson, R.H., *Inorg. Chem.*, 1984, **23**, 387 (*synth, uv*)

C_2H_3Cl IC-003047

Vinyl chloride
Chloroethene, 9CI. Chloroethylene. R 1140
[75-01-4]

$H_2C{=}CHCl$

M 62.4
Manuf. by thermal dehydrochlorination of 1,2-dichloroethane or by reaction of acetylene with HCl over mercury-based catalysts. Refrigerant. Polymerised by light or catalysis to PVC, an industrial polymer with numerous uses. Gas at r.t. d_4^{20} 0.912. Fp −159.7°. Bp −13.9°. n_D^{20} 1.4046.

▷ Human carcinogen, OES 7 ppm-fv/v (max. exp. limit), irritant. Highly flammable, flash p. −78°, may form unstable polyperoxide. KU9625000.

Dana, L.I. *et al*, *J. Am. Chem. Soc.*, 1927, **49**, 2801 (*synth*)
U.S. Pat., 1 926 638, (1933); *CA*, **27**, 5756 (*synth*)
U.S. Pat., 1 934 324, (1934); *CA*, **28**, 488 (*synth*)

IC-003056

$C_2H_3Cl_2GaO_2$

Gallium(*III*) acetate chloride (Ga(OAc)Cl$_2$)

Acetato(dichloro)gallium. Gallium(III) *dichloride ethanoate*

$GaCl_2(OAc)$

M 199.6
Synth. from Gallium(*III*) acetate, IC-005047 + HCl or $GaCl_3$. Colourless moisture sensitive cryst. Sol. H_2O, alcohols. Spar. sol. Et_2O.

Funk, H. *et al*, *Z. Anorg. Allg. Chem.*, 1964, **330**, 70 (*synth*)
Compr. Inorg. Chem., Pergamon, Oxford, 1973, **1**, 1105.

IC-003057

$C_2H_3Cl_2O_3Ta$

(Acetato-*O*)dichlorooxotantalum(*V*), 11Cl

[86677-00-1]

$TaO(OAc)Cl_2$

M 326.8
Chain struct. with Ta—O—Ta links. Synth. from $TaCl_5$ and Ac_2O or AcOH. The resulting mixture of (Acetato-*O*)tetrachlorotantalum(*V*), IC-003069 and $TaO(OAc)Cl_2$ is separated in C_6H_6 soln. Yellow solid.

Viard, B. *et al*, *J. Chem. Res. (S)*, 1983, 84 (*synth, ir*)

IC-003058

$C_2H_3Cl_3$

1,1,1-Trichloroethane, 9Cl, 8Cl

Methylchloroform. α-Trichloroethane

[71-55-6]

Cl_3CCH_3

M 133.4
Used in wide range of industrial cleaning and degreasing operations. Nonflammable liq. Insol. H_2O. d_4^{20} 1.34. Mp −32.5°. Bp 74.1°.

▷ Mod. toxic, OES 1900 mg m^{-3}. Vapour can ignite or explode if heated. Reacts with Al. Production controlled by environmental legislation. KJ2975000.

Sutton, L.E., *Proc. R. Soc. London, A*, 1931, **133**, 673 (*synth*)

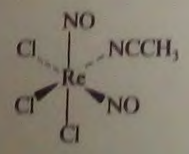
IC-003062

$C_2H_3Cl_3N_3O_2Re$

(Acetonitrile)trichlorodinitrosylrhenium, 11Cl

[80529-32-4]



M 393.6
Synth. from $Re(NO)_2Cl_3$ and MeCN. Green cryst. (*MeCN*).

Mronga, N. *et al*, *Z. Anorg. Allg. Chem.*, 1981, **482**, 95 (*synth, ir, cryst struct, props*)

IC-003063

$C_2H_3Cl_3O_2Ti$

(Acetato-*O*)trichlorotitanium(*IV*), 11Cl, 9Cl

Titanium acetate trichloride

[5908-59-8]

$TiCl_3OAc$

M 213.2
Synth. from $TiCl_4$ + 1 mol. HOAc at r.t. Has been used to catalyse the polym. of α-olefins. Yellow solid. Forms $Ti(OAc)_2Cl_2$ with excess HOAc but further substitution is not obsd. Both are v. moisture-sensitive. Insol. CCl_4, pet. ether.

NOCl complex: [19126-60-4].
$C_2H_3Cl_4NO_3Ti$ M 278.7
Synth. by condensing NOCl at 0° onto parent compd.

Bis-Py complex: [104881-52-9]. (*Acetato*-O)*trichlorobis(pyridine)titanium*(IV), *11Cl*
$C_{12}H_{13}Cl_3N_2O_2Ti$ M 371.4
Synth. from parent compd. + Py. Yellow solid.

[37960-29-5, 39019-81-3]

Amaudrut, J. *et al*, *Bull. Soc. Chim. Fr.*, 1972, 2228; 1975, 1933 (*synth, ir*)

IC-003071

$C_2H_2Cr_3O_{10}$

Acetatodi-μ-oxotetraoxotrichromium

$Cr_3(OAc)O_8$

M 359.0

Formed as a graphite intercalate.

Graphite intercalate: [100984-91-0]

Synth. by reaction of CrO_3 and graphite in acetic acid soln. Solid. Unit cell contains a $(CrO_3)_3$ trimer and an acetic acid, which links trimers to form zig-zag chain.

Kobayashi, T. *et al. J. Phys. Chem.*, 1986, **90**, 2253 (*cryst struct*)

IC-003072

$C_2H_3CsO_2$

Caesium acetate

Acetic acid, caesium salt, 8CI. Ethanoic acid, caesium salt

[3396-11-0]

CsOAc

M 191.9

Prepd. by slow neutralisation of Cs_2CO_3 with AcOH in aq. soln. Commercially available. Widely used in catalysis. Deliquescent, white hexagonal cryst. V. sol. H_2O (945 g per 100 cm^3 at 2.5°; 1346 g per 100 cm^3 at 89°). Mp 194°.

Gmelin Handbook Inorg. Chem., Syst. No. 25, 1955, 240 (*rev, bibl*)

$C_2H_6AuClSe$ IC-003159

Chloro(dimethyl selenide)gold(*I*)

Chloro[selenobis(methane)]gold, 9CI

[41867-97-4]

$ClAu(SeMe_2)$

M 341.4
Air stable. Cryst. (C_6H_6/Me_2CO). Mp 100° dec.

Dash, K.C. *et al, Chem. Ber.*, 1973, **106**, 1221 (*synth, nmr*)
Roulet, R. *et al, Chimia*, 1975, **29**, 346.

$C_2H_6AuCl_3S$ IC-003160

Trichloro(dimethyl sulfide)gold(*III*)

Trichloro[thiobis[methane]-S]gold, 9CI

[29826-91-3]

Cl_3AuSMe_2

M 365.4
Yellow, air-stable.

Ray, P.C. *et al, Indian J. Chem.*, 1930, **7**, 67 (*synth*)
Allen, E.A. *et al, Spectrochim. Acta, Part A*, 1972, **28**, 2257 (*synth, ir*)

$C_2H_6AuS_2^{\ominus}$ IC-003161

Bis(methanethiolato)aurate(1−), 10CI

Bis(methylthio)aurate(1−)

$[MeSAuSMe]^{\ominus}$

M 291.1 (ion)

Tetrabutylammonium salt: [77424-98-7].
Colourless cryst. ($CHCl_3$/Et_2O). Mp 86-88°.

Bis(triphenylphosphine)iminium salt: [77679-34-6].
Colourless cryst. (aq. EtOH). Mp 188-189° dec.

Bowmaker, G.A. *et al, J. Chem. Soc., Dalton Trans.*, 1981, 267 (*synth*)

$C_2H_6BBr_3S$ IC-003162

Tribromo(dimethyl sulfide)boron

Tribromo[thiobis[methane]]boron, 10CI. Thiobis[methane] compd. with tribromoborane (1:1), 9CI. Methyl sulfide compd. with boron bromide (BBr_3) (1:1), 8CI. Tribromoborane dimethyl sulfide

[29957-59-3]

$Me_2S—BBr_3$

M 312.6
Convenient means of handling the otherwise highly moisture-sensitive compd., BBr_3. White amorph. powder, stable to brief exp. to air or long-term storage under N_2. Mp 108°.

Schmidt, M., *et al, Chem. Ber.*, 1970, **103**, 3705 (*pmr*)

$VOCl(OSO_2Me)_2$

M 292.5

Synth. by heating under reflux $VOCl_3$ and 2 moles $MeSO_3H$ in CCl_4. Orange-yellow solid. Ir $\nu_{V=O}$ 975 cm^{-1}.

Kumar, S. *et al, Indian J. Chem., Sect. A*, 1984, **23**, 200 (*synth, uv-vis, ir*)

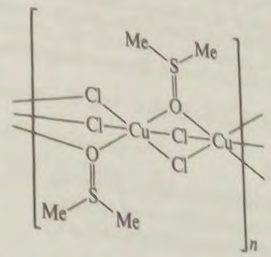
$C_2H_6Cl_2CuOS$

IC-003180

Dichloro(dimethyl sulfoxide)copper(*II*)

Dichloro[sulfinylbis[methane]-O]copper, 10CI. Copper(II) *chloride dimethylsulfoxide*

[72347-99-0]



M 212.5

Struct. comprises ferromagnetic linear chains of Cu ions with 3 bridging ligands between each pair. Coordination severely distorted from octahedral with 4 long and 2 short bonds. V. hygroscopic orange cryst. Sol. EtOH; insol. Et_2O. Mp 125° dec.

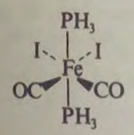
$C_2H_6FeI_2O_2P_2$ IC-003204

Dicarbonyldiiodobis(phosphine)iron, 9CI
[29845-14-5]



M 433.6

cis-form [35260-83-4]
Opaque brown cryst. (CH_2Cl_2).

Bigorgne, M. *et al, J. Organomet. Chem.*, 1970, **23**, 201 (*synth, spectra*)
Birck, J.L. *et al, Compt. Rend. Hebd. Seances Acad. Sci. Sect. C.*, 1971, **273**, 880 (*cryst struct*)

$C_2H_6FeN_2O_2S_2^{\ominus}$ IC-003205

Bis(methanethiolato)dinitrosylferrate(1−)
$[Fe(NO)_2(SMe)_2]^{\ominus}$ (C_{2v})
[97773-69-8]

M 210.0 (ion)
Formed from diamagnetic dimer by reaction with nucleophile. Associated with cancerous states in animals. Paramagnetic.

Butler, A.R. *et al, Polyhedron*, 1985, **4**, 797 (*synth, esr*)

$C_2H_6FeO_6S_2$ IC-003206

Iron(*II*) methanesulfonate
Ferrous methanesulfonate. Bis(methanesulfonato)iron(II)
[56525-23-6]

$Fe[OS(O)_2Me]_2$

M 246.0
Hygroscopic grey-white powder. Sol. MeOH.

α-form

Synth. from $FeCl_2.4H_2O$ + $MeSO_3Ag$ in H_2O. Hygroscopic white solid. Remains paramagnetic down to 4.2K, but with some magnetic exchange.

β-form

Obt. from α-form on exposure to refluxing 2,2-dimethoxypropane for 3 days. White solid. Antiferromagnetic ordering occurs at 23K.

Methanesulfonic acid solvate:
$C_3H_{10}FeO_9S_3$ M 342.1
Synth. from $MeSO_3H$ + anhydrous $FeCl_2$ at 100°. White cryst.

▷ Synthetic route vigorous, evolving HCl (g).

Tetrakis-Py complex: see *Bis(methanesulfonato-O) tetrakis(pyridine)iron*(II), IC-011055

Haynes, J.S. *et al, Chem. Phys. Lett.*, 1980, **75**, 596 (*synth, mössbauer*)

Bis(methanesulfonato-*O*)oxovanadium(*IV*), 11CI
[90760-15-9]

$VO(OSO_2Me)_2$

M 257.1
Bis-Py complex: [90759-37-8].
$C_{12}H_{16}N_2O_7S_2V$ M 415.3

Synth. from Py and parent compd. Green solid. Paramagnetic; μ_{eff} = 1.78μ_B.
Tris-Py complex: [90759-39-0].
Blue solid. Paramagnetic; μ_{eff} = 1.75μ_B; Ir $\nu_{V=O}$ 1010 cm^{-1}.

Kumar, S. *et al*, *Indian J. Chem., Sect. A*, 1984, **23**, 200 (*derivs, synth, uv-vis, ir, magnetism*)

IC-003228

$C_2H_6O_{12}Zn_5$

Zinc carbonate hydroxide ($Zn_5(CO_3)_2(OH)_6$)
Bis(carbonato)hexahydroxypentazinc. Hydrozincate. Basic zinc carbonate
[12070-69-8]

$Zn_5(OH)_6(CO_3)_2$

M 549.0
Two Zn environments. 3 × Zn(1): octahedral, forms part of a sheet. 2 × Zn(2): tetrahedral, occurs above and below holes in sheets. 2 O of each CO_3 are bonded to an octahedral and a tetrahedral Zn, a 3rd O is H-bonded to 3 × OH groups. Synth. from ZnO, $(NH_4)_2CO_3$ and NH_3. Also formed by corrosion of Zn. Used in heat-developable photographic film; in deodorant compositions; in smoke inhibitors for pvc; in heat stabilisers for phenolic resins; fire-proofing agent; absorbant for H_2S; catalyst for cross-linking of epoxy coatings; oxidn. catalyst of amines; desulfurisation agent. Colourless cryst.

Bis(methanethiolato)lead
Bis(methylmercaptide. Bis(methylthio)lead. Lead(II) *methylmercaptide. Bis(methylthio)lead. Methanethiol lead(2+) salt, 9CI. Lead bis(methyl sulfide). Lead*(II) *methylthiolate*
[35029-96-0]

$Pb(SMe)_2$

M 301.4
Widely used intermediate, oxidised by air or I_2 to give disulfides or by HNO_3 to give thiosulfonic acid. Ppted. on addition of MeSH to aq. solns.of $Pb^{2\oplus}$ salts. Commercially available. Previously used as a sweetener in petrol. Moisture-sensitive yellow powder, dec. at 180-190° to give Me_2S and PbS.

Reid, E.E., *Organic Chemistry of Bivalent Sulphur*, Chemical Pub. Co., N.Y., 1958, **1**, 151 (*synth, uses*)

IC-003230

$C_2H_6PtS_2$

Bis(methanethiolato)platinum(*II*)
Bis(methylthio)platinum. Platinum(II) *methylmercaptide*

$Pt(SMe)_2$

M 289.2
Probably polymeric with square planar Pt. Formed by demethylation of SMe_2 or loss of SMe from other MeSR compds. Synth. from Platinum(*II*) chloride ($PtCl_2$), IC-016772 + SMe_2. Yellow solid.

Blomstrand, C.W., *J. Prakt. Chem.*, 1883, **27**, 161, 196 (*synth*)
Abel, E.W. *et al*, *J. Organomet. Chem.*, 1966, **5**, 260 (*synth*)

Bis(selenourea)cadmium dibromide. Cadmium(II) bromide bis(selenourea)

[33702-45-3]

$[(H_2N)_2C{=}Se]_2CdBr_2$

M 518.2

Cryst.

Aitken, G.B. *et al, J. Chem. Soc., Dalton Trans.*, 1972, 2103 (*synth, ir*)

$C_2H_8Br_2N_4Se_2Zn$ IC-003258

Dibromobis(selenourea-*Se*)zinc

[38897-51-7]

$ZnBr_2[Se{=}C(NH_2)_2]_2$

M 471.2

Prepd. from $ZnBr_2$ + selenourea.

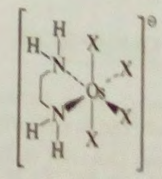
trans-form [34383-87-4]
Prepd. from $ZnSO_4$ + nicotinic acid. Colourless plates.

Aitken, G.B. *et al, J. Chem. Soc., Dalton Trans.*, 1972, 2103 (*synth, ir*)

$C_2H_8Br_4N_2Os^{\ominus}$ IC-003259

Tetrabromo(ethylenediamine)osmate(*III*)(1−), 9CI

Tetrabromo(1,2-diaminoethane)osmate(III)(1−)



X = Br

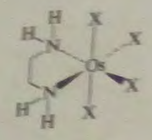
M 569.9 (ion)

Complexes of the type $[OsCl_nBr_{6-n}(en)]$ are also known.

Cs salt: [56148-16-4].
Obt. as a byproduct from the synth. of $OsBr_4$en. Yellow brown solid.

Bolourtschi, M.A. *et al, Z. Anorg. Allg. Chem.*, 1975, **415**, 25 (*synth, ir, uv, props*)

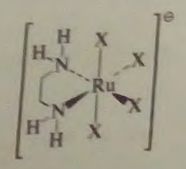
$C_2H_8Br_4N_2Os$ IC-003260
Tetrabromo(ethylenediamine)osmium(IV)
Tetrabromo(1,2-ethanediamine-N,N')osmium(IV), 9CI
[56148-12-0]



X = Br

M 569.9
Synth. from $K_2[OsBr_6]$ and anhydrous ethylenediamine. Dark green cryst. Related complexes also descr.
Bolourtschi, M.A. *et al, Z. Anorg. Allg. Chem.*, 1975, **415**, 25 (*synth, ir, uv, props*)

$C_2H_8Br_4N_2Ru^{\ominus}$ IC-003261
Tetrabromo(ethylenediamine)ruthenate(III)(1−)
Tetrabromo(1,2-ethanediamine-N,N')ruthenate(1−), 9CI
Tetrabromo(1,2-diaminoethane)ruthenate(III)(1−)
[15404-87-2]



X = Br

M 480.7 (ion)
Prepd. by treating (Ethylenediamine)bis(oxalato) ruthenate(III)(1−), IC-005025 with aq. HBr. Sol. H_2O.
Dibromobis(1,2-ethylenediamine)ruthenium(1+) salt: see *Dibromobis(ethylenediamine)ruthenium(III)(1+), IC-004332*
1,10-Phenanthrolinium(1+) salt: [17185-75-0].
Red-brown solid. Ir ν_{Ru-Br} 242, 205 cm^{-1}.
Broomhead, J.A. *et al, J. Chem. Soc. A*, 1967, 546 (*synth, ir, uv, magnetism*)

$C_2H_8Cl_8Hf_2N_4S_2$ IC-003287

Di-μ-chlorohexachlorobis(thiourea-*S*)dihafnium(*IV*), 11CI

[84191-50-4]

$[(H_2N)_2C{=}S]_2Hf_2Cl_8$

M 792.8

Struct. not fully elucidated, but authors' proposal that only one thiourea is bonded to Hf is unlikely, cf Di-μ-chlorohexachlorobis(*N,N′*-diphenylthiourea-*S*) dihafnium(*IV*), IC-011853. Synth. from $HfCl_4$ and thiourea. White solid, unstable in moist air.

Monomer: [84366-12-1]. *Hafnium*(IV) *chloride thiourea. Tetrachloro(thiourea-S)hafnium*(IV), *11CI*

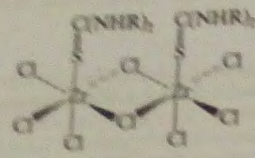
$CH_4Cl_4HfN_2S$ M 396.4

Konunova, Ts.B. *et al, CA*, 1983, **98**, 60754g (*heat of formn*)
Konunova, Ts.B. *et al, Russ. J. Inorg. Chem.* (*Engl. Transl.*), 1983, **28**, 447, 515 (*synth, ir, thermochem*)

$C_2H_8Cl_8N_4S_2Zr_2$ IC-003288

Di-μ-chlorohexachlorobis(thiourea-*S*)dizirconium(*IV*), 11Cl

[84191-69-1]



R = H

M 618.3

Synth. by mixing ethyl acetate solns. of $ZrCl_4$ and thiourea. White solid, readily hydrol.

Monomer: [84366-13-2]. *Tetrachloro(thiourea)zirconium(IV). Zirconium tetrachloride thiourea. Zirconium(IV) chloride thiourea*

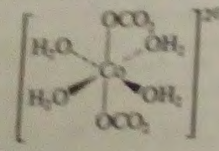
$CH_4Cl_4N_2SZr$ M 309.1

Not separately identified.

Kuznetsova, Ts.B. *et al., Russ. J. Inorg. Chem. (Engl. Transl.)*, 1983, **28**, 467, 515 (*synth, ir*)

$C_2H_8CoO_{10}^{2\ominus}$ IC-003289

Tetraaquabis(carbonato(2−)-*O*)cobaltate(2−), 9Cl



M 251.0 (ion)

trans-Octahedral at Co.

Di-K salt: [58592-59-9]. *Potassium cobalt carbonate tetrahydrate*

Rose-coloured cryst.

Reynolds, W.C. *et al., J. Chem. Soc.*, 1958, **73**, 262 (*synth*)

Harlow, R.L. *et al., Acta Crystallogr., Sect. B*, 1976, **32**, 466 (*cryst struct*)

$C_2H_8CrF_4N_2^{\ominus}$ IC-003290

(Ethylenediamine)tetrafluorochromate(*III*)(1−), 8Cl

(1,2-Ethanediamine-N,N′)tetrafluorochromate(III)(1−), 11Cl, 10Cl, 9Cl

M 188.0 (ion)

Octahedral complex.

cis-Bis(ethylenediamine)difluorochromium(III) salt: [13842-66-4]. *Bis(1,2-ethanediamine-N,N′)difluorochromium(1+) (1,2-ethanediamine-N,N′)tetrafluorochromate(1−)*

$C_4H_{16}Cr_2F_6N_8$ M 378.2

Starting material. Purple solid (aq. EtOH). Hydrol. rapidly in H_2O.

Ethylenediammonium(2+) salt, chloride: [94586-00-2]. Blue cryst.

[13521-43-4]

Vaughn, J.W. *et al., Inorg. Chem.*, 1973, **12**, 2346 (*synth*)

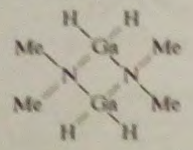
Diaz, C. *et al., Transition Met. Chem.*, 1984, **9**, 469 (*cryst struct, ir, uv-vis*)

Inorg. Synth., 1986, **24**, 185 (*synth, Cr(en)$_2$F$_2$ salt*)

C_2H_8GaN IC-003291

(Dimethylamido)dihydrogallium

Dimethylaminogallane



Dimer

M 115.8

Dimeric in gas phase and in C_6H_6; not monomeric as first reported. Synth. from Gallane, IC-019047 and Me_2NH.

Dimer: [97642-68-7]. *Tetrahydrobis[μ-(N-methylmethanaminato)]digallium, 11Cl. Bis[μ-(dimethylamido)]tetrahydrodigallium*

$C_4H_{16}Ga_2N_2$ M 231.6

White, air- and moisture-sensitive solid.

Greenwood, N.N. *et al., J. Chem. Soc. A*, 1966, 706 (*synth*)

Baxter, P.L. *et al., J. Chem. Soc., Dalton Trans.*, 1985, 807 (*synth, ed, ir, raman*)

$C_2H_8I_3N_3ORu$ IC-003292

(Ethylenediamine)triiodo(nitrosyl)ruthenium

(1,2-Ethanediamine-N,N′)triiodo(nitrosyl)ruthenium

$Ru(NO)I_3(NH_2CH_2CH_2NH_2)$

M 571.8

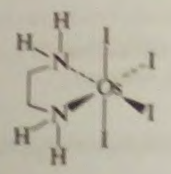
Reported in early literature; struct. unknown.

Charonnat, R., *Ann. Chim. (Paris)*, 1931, **16**, 225 (*synth*)

$C_2H_8I_4N_2Os$ IC-003293

(Ethylenediamine)tetraiodoosmium(*IV*)

[56148-13-1]



M 757.9

Synth. by reaction of Tetrachloro(ethylenediamine) osmium(*IV*), IC-003281 with HI. Dark blue cryst.

Bolourtchi, M.A. *et al., Z. Anorg. Allg. Chem.*, 1975, **415**, 25 (*synth, ir, uv*)

$C_2H_8I_4N_2Ru^{\ominus}$ IC-003294

(Ethylenediamine)tetraiodoruthenate(*III*)(1−)

(1,2-Ethanediamine-N,N′)tetraiodoruthenate(1−), 9Cl. (1,2-Diaminoethane)tetraiodoruthenate(III)(1−)

As Tetrabromo(ethylenediamine)ruthenate(*III*)(1−), IC-003261 with

X = I

M 668.7 (ion)

cis-Octahedral anion. Prepd. by treating (Ethylenediamine) bis(oxalato)ruthenate(*III*)(1−), IC-005025 with aq. HI. Sol. H_2O.

Bis(1,2-ethylenediamine)dichlororuthenium(1+) salt, 9Cl

Bis(ethylenediamine)dichlororuthenium(III)(1+), 8Cl: (004374

Broomhead, J.A. *et al., J. Chem. Soc. A*, 1967, 546 (*synth, str, ir, magnetism*)

$C_2H_8MnN_2O_4S_2$ IC-003295

Tetraaquabis(thiocyanato-*N*)manganese(*II*), 11Cl

Tetraaquabis(isothiocyanato)manganese(II). Manganese(II) isothiocyanate tetrahydrate

[93603-91-9]

$Mn(NCS)_2(OH_2)_4$

M 243.1

trans-Octahedral. Synth. from aq. solns. of $Ba(SCN)_2.2H_2O$ and $MnSO_4.4H_2O$. Pale green cryst. (H_2O). Mp 42°. Dehydration occurs at 135°, dec. of anhydrous salt at 432°. Struct. of 18-crown-6 adduct also determined.

Beagley, B. *et al., Inorg. Chim. Acta*, 1984, **89**, 163 (*synth, cryst struct, thermal props*)

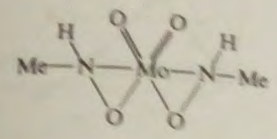
Zhang Wen-Xing, *et al., Acta Chim. Sin. (Engl. Ed.)*, 1987, **45**, 1143 (*cryst struct*)

$C_2H_8MoN_2O_4$ IC-003296

Bis(*N*-methylhydroxylamido)dioxomolybdenum(*VI*)

Bis(N-hydroxymethanaminato-N,O)dioxomolybdenum(VI), 11Cl, 10Cl

[70631-31-1]



M 220.0

Synth. from MoO_3 + $[MeH_2NOH]Cl$ in 2.5*M* KOH. Colourless cryst. (H_2O). Sol. H_2O, MeCN, DMF.

Wieghardt, K. *et al., Angew. Chem., Int. Ed. Engl.*, 1979, **18**, 548 (*cryst struct, synth*)

Wieghardt, K. *et al., Inorg. Chem.*, 1980, **19**, 2927 (*reactions, props*)

$C_2H_8NPS_3$ IC-003297

Dimethylphosphoramidotrithioic acid, 9Cl, 8Cl

(Dimethylamido)bis(hydrogensulfido)thiophosphorus(V)

$Me_2NP(S)(SH)_2$

M 173.2

Di-Ph ester: Diphenyl dimethylphosphoramidotrithioate

$C_{14}H_{16}NPS_3$ M 325.4

Visc. liq. $Bp_{0.05}$ 110°.

Fr. Pat., 1 378 035, (1964); *C.A.*, **62**, 10371.

$C_2H_8N_2Ni^{2\ominus}$ IC-003298

Ethylenediaminenickel(*II*)(2+), 8Cl

(1,2-Ethanediamine-N,N′)nickel(II)(2+), 9Cl

[3580-97-3]

$Ni(NH_2CH_2CH_2NH_2)^{2\ominus}$

M 118.7 (ion)

Studied in aq. soln. in which it is undoubtedly better formulated as Tetraaqua(ethylenediamine)nickel(*II*) (2+), IC-003381.

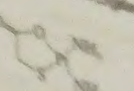
Yokoi, M. *et al., Nippon Kagaku Zasshi, Jpn. J. Chem.*, 1962, **83**, 1192

Ishigure, S. *et al., Bull. Chem. Soc. Jpn.*, 1984, **57**, 3021

$C_2H_8N_2O_2PtS$ IC-003299

Dimethylbis(thiocyanato-*N*)platinum(*II*), 11Cl

[84350-31-2]



M 319.2

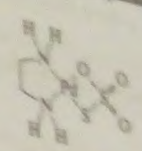
Probably square planar. Synth. from reactions of Dimethylbis(dimethylsulfoxide)platinum(II), IC-019460 + $HSCH_2COOH$. Pale yellow powder. Insol. H_2O, org. solvs.

Kukushkin, Yu.N. *et al., Russ. J. Inorg. Chem. (Engl. Transl.)*, 1982, **27**, 1787 (*synth, ir*)

$C_2H_8N_2O_2PtS_2$ IC-003300

Ethylenediamine(thiosulfato-*O,S*)platinum(*II*)

[18009-45-1]



M 375.6

Said to be S,O-bonded. Solvated resin is fact to $Pd_2(S_2O_3)_3(en)_2$. Yellow-green solid + $2H_2O$.

[18009-41-9]

Rychlinkov, D.I. *et al., Dokl. Akad. Nauk SSSR, Ser. Khim.*, 1965, **48**, 169; *C.A.*, **38**, 4577 (*synth*)

M 120.5

Cryst. Mp 182° (174°).

Rietz, R.R. *et al*, *J. Organomet. Chem.*, 1973, **63**, 1 (*nmr, synth*)
Plešek, J. *et al*, *Collect. Czech. Chem. Commun.*, 1974, **39**, 821 (*ms, synth*)

IC-003319

$C_2H_{10}B_8$

1,6-Dicarbadecaborane(10), 10CI

[23704-81-6]

M 120.5

closo-. Cryst. Mp 146°. Dipole moment 2.22D.

Garrett, P.M. *et al*, *Inorg. Chem.*, 1969, **8**, 1907 (*synth, ir, nmr*)

IC-003320

$C_2H_{10}B_8$

1,10-Dicarbadecaborane(10), 10CI

[23653-23-8]

M 120.5

closo-. Cryst. Mp 162°.

Garrett, P.M. *et al*, *Inorg. Chem.*, 1969, **8**, 1907 (*synth, ir, nmr*)
Leites, L.A. *et al*, *Bull. Acad. Sci. USSR, Div. Chem. Sci.* (*Engl. Transl.*), 1975, 1866 (*ir, raman*)
Atavin, E.G. *et al*, *J. Mol. Struct.*, 1980, **65**, 259 (*ed*)

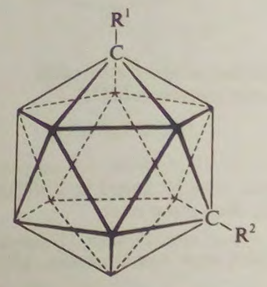
IC-003321

$C_2H_{10}B_{10}Br_2Hg_2$

Dibromo-μ-1,7-dicarbadodecaboran(12)-1,7-diyldimercury, 8CI

1,7-Bis(bromomercuri)-m-*carborane*. *1,7-Bis(bromomercuri) neobarene*

[23704-89-4]



$R^1 = R^2 = HgBr$

M 703.1

Cryst. (toluene). Mp 314-316°.

Zakharkin, L.I. *et al*, *J. Organomet. Chem.*, 1967, **7**, 385 (*synth*)

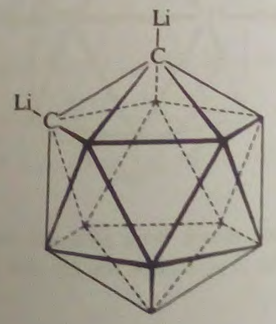
IC-003322

$C_2H_{10}B_{10}Li_2$

μ-1,2-Dicarbadodecaborane(12)-1,2-diyldilithium, 10CI

Dilithium-1,2-dicarbadodecaborate(2−). *1,2-Dilithio-1,2-dicarbadodecaborane(12)*

[22220-85-5]



M 156.0

closo-. Precursor to many σ-substituted derivs. of 1,2-$C_2B_{10}H_{12}$.

Heying, T. *et al*, *Inorg. Chem.*, 1963, **2**, 1097 (*synth*)
Grafstein, D. *et al*, *Inorg. Chem.*, 1963, **2**, 1120 (*synth*)

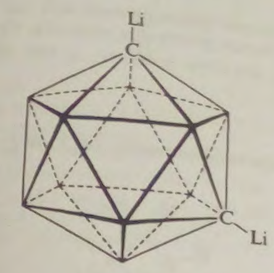
IC-003323

$C_2H_{10}B_{10}Li_2$

μ-1,7-Dicarbadodecaborane(12)-1,7-diyldilithium, 10CI

Dilithium-1,7-dicarbadodecaborate(2−). *1,7-Dilithio-1,7-dicarbadodecaborane(12)*

[17217-89-9]



M 156.0

closo-. Precursor to many σ-substituted derivs. of 1,7-$C_2B_{10}H_{12}$. Sol. Et_2O, C_6H_6, THF.

Grafstein, D. *et al*, *Inorg. Chem.*, 1963, **2**, 1128.
Stanko, V. *et al*, *J. Gen. Chem. USSR* (*Engl. Transl.*), 1971, **41**, 2053.

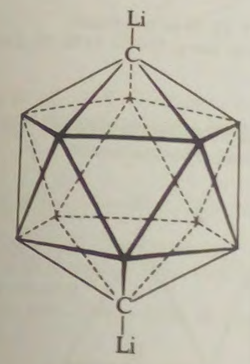
IC-003324

$C_2H_{10}B_{10}Li_2$

μ-1,12-Dicarbadodecaborane(12)-1,12-diyldilithium, 10CI

Dilithium-1,12-dicarbadodecaborate(2−). *1,12-Dilithio-1,12-dicarbadodecaborane(12)*

[23087-97-0]



M 156.0

closo-. Precursor to many σ-substituted derivs. of 1,12-$C_2B_{10}H_{12}$. Sol. liq. NH_3.

Zakharkin, L. *et al*, *Bull. Acad. Sci. USSR, Div. Chem. Sci.* (*Engl. Transl.*), 1968, 2532 (*synth*)
Stanko, V. *et al*, *J. Gen. Chem. USSR* (*Engl. Transl.*), 1971, **41**, 2053 (*synth*)

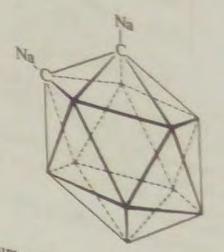
IC-003325

$C_2H_{10}B_{10}Na_2$

μ-1,2-Dicarbadodecaborane(12)-1,2-diyldisodium, 10CI

Disodium-1,2-dicarbadodecaborate(2−). *1,2-Disodio-1,2-dicarbadodecaborane(12)*

[56310-81-7]



M 188.1

closo-. Precursor to many σ-substituted $1,2\text{-}C_2B_{10}H_{12}$ derivs. Sol. Et_2O.

Zakharkin, L. *et al*, *Bull. Acad. Sci. USSR, Div. Chem. Sci.* (*Engl. Transl.*), 1964, 546 (*synth*)
Zakharkin, L., *Tetrahedron Lett.*, 1964, 2255 (*synth*)

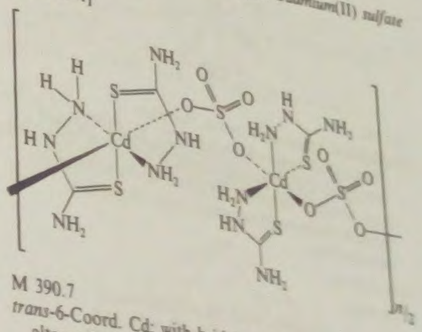
IC-003326

$C_2H_{10}CdN_6O_4S_3$

Bis(hydrazinecarbothioamide-N^2,S)[sulfato(2−)-O]cadmium

Bis(thiosemicarbazide)cadmium sulfate. *Cadmium(II) sulfate bis(thiosemicarbazide)*

[57193-96-1]



M 390.7

trans-6-Coord. Cd; with bridging SO_4 groups and alternating *cis* and *trans* arrangements of the two thiosemicarbazide units. Cryst. (H_2O).

[57193-95-0]

Larsen, E. *et al*, *Acta Chem. Scand., Ser. A*, 1975, **29**, 481 (*synth, cryst struct*)
Bauer, R. *et al*, *J. Chem. Phys.*, 1979, **70**, 4117.

IC-003327

$C_2H_{10}Cl_2FeN_2$

Dichlorobis(methylamine)iron(II)

Iron(II) chloride bis(methylamine). *Ferrous chloride bis(methylamine)*

M 188.8

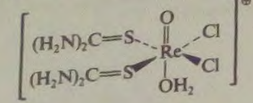
Struct. unknown. Unlikely to be simple 1:1 complex. Synth. from $FeCl_2$ or $FeCl_3$ + $MeNH_2$. White solid. V moisture and air-sensitive. Insol. or reacts with most solvs. $\mu_{eff} = 4.9\mu_B$. Dec. at 120°.

McGregor, W.R. *et al*, *J. Inorg. Nucl. Chem.*, 1966, **28**, 1027 (*synth, ir, magnetism*)

IC-003328

$C_2H_{10}Cl_2N_4O_2ReS_2^{\oplus}$

Aquadichlorooxobis(thiourea)rhenium(*V*)(1+), 9CI



trans,cis,cis-form

M 443.3 (ion)
Octahedral. Mean interatomic distances: Re=O 145.4, Re—S 234.8, Re—ON 223.1, Re—Cl 236.5 pm.

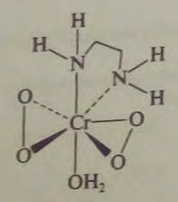
trans,cis,cis-form [60869-18-3]
Oxoaqua-cis-dichloro-cis-bis(thiourea)rhenium(V)(*1+*)
Chloride: Synth. from $KReO_4$ and thiourea in conc. HCl. Blue needles (conc. HCl).

Lis, T., *Acta Crystallogr., Sect. B*, 1976, **32**, 2707 (*cryst struct*)

IC-003329

$C_2H_{10}CrN_2O_5$

Aqua(1,2-ethanediamine-*N,N'*)diperoxychromium(*IV*), 11CI, 10CI
Aqua(ethylenediamine)diperoxochromium(IV).
Diperoxoaquo(ethylenediamine)chromium(IV)
[17192-14-2]



M 194.1
Pentagonal bipyramidal struct. See also Triamminediperoxychromium(*IV*), IC-017715 and Tris(cyano-*C*)diperoxychromate(*IV*)(3−), IC-003551 for relat. compds. Intermed. in synth. of chromium(*III*) amine complexes. Olive green cryst., forms a monohydrate.

▷ May explode.

[17168-84-2]

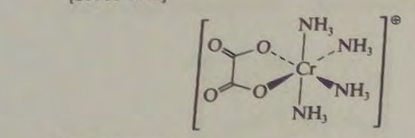
Tetraammineoxalatochromium(*III*)(1+), 8Cl

Tetraammine[ethanedioato(2−)-O,O′]chromium(1+), 11Cl, 10Cl, 9Cl

[28101-87-3]



M 208.1 (ion)

Chloride: [15275-11-3].
Red orange cryst. (10% aq. NaCl).

Bromide: [14264-11-0].
Red-orange cryst. (10% aq. NaBr).

Nitrate: [14096-59-4].
Synth. from $[Cr(OH_2)(NH_3)_5](NO_3)_3$ and aq. $H_2C_2O_4$ and $K_2C_2O_4$ at 70°. Red orange cryst. (5-10% aq. KNO_3). Forms a monohydrate.

Perchlorate: [42281-04-9].
Synth. from oxalic acid and $[Cr(OH_2)(NH_3)_5](ClO_4)_3$.

Dithionate (2:1): [54538-45-3].
Red solid.

[18443-73-7]

$[(H_3N)_5Co(OOCCOO)]^{\oplus}$

M 232.1 (ion)
Unusual monodentate C_2O_4.
Perchlorate: Solid. Sol. H_2O.

Saffir, P. *et al, J. Am. Chem. Soc.*, 1960, **82**, 13 (*synth*)
Vando, A.F. *et al, J. Am. Chem. Soc.*, 1972, **94**, 6655 (*uv, photochem*)

IC-003380

$C_2H_{15}N_5O_3Ru^{2\oplus}$

(Acetato-*O*)tetraammine(nitrosyl)ruthenium(2+), 9CI

$[Ru(NO)(OAc)(NH_3)_4]^{2\oplus}$

M 258.2 (ion)
trans-Octahedral. Prepd. by heating Tetraamminechloro(nitrosyl)ruthenium(2+), IC-016436 in acidic soln. with NaOAc. Sol. H_2O.
Diiodide: [36400-21-2].
Yellow salt. Ir ν_{NO} 1890 cm^{-1}.

[60182-92-6]

Schreiner, A.F. *et al, Inorg. Chem.*, 1972, **11**, 880 (*synth, ir, uv, mcd*)
Inorg. Synth., 1976, **16**, 13 (*synth*)

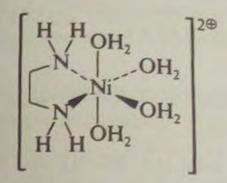
IC-003381

$C_2H_{16}N_2NiO_4^{2\oplus}$

Tetraaqua(ethylenediamine)nickel(*II*)(2+), 8CI

*Tetraaqua(1,2-ethanediamine-*N,N′*)nickel(II)(2+), 9CI*

[15615-30-2]



M 190.8 (ion)
Formed in solns. containing $Ni^{2\oplus}$, en and H_2O but more often converts to complexes with 2 or 3 en per Ni.
Dinitrate: [74009-08-8].
$C_2H_{16}N_4NiO_{10}$ M 314.8
Blue cylindrical cryst.
Sulfate, dihydrate: [70956-81-9].
$C_2H_{20}N_2NiO_{10}S$ M 322.9
Pale blue prisms. Monohydrate also known.

[43163-60-6]

McDougall, G.J. *et al, J. Chem. Soc., Dalton Trans.*, 1980, 654.
Healy, P.C. *et al, Aust. J. Chem.*, 1984, **37**, 921.

IC-003382

$C_2H_{16}N_5O_4Rh^{2\oplus}$

Pentaammineoxalatorhodium(*III*)(2+)

$[Rh(NH_3)_5C_2O_4H]^{2\oplus}$

M 277.0 (ion)
Probably monodentate oxalate monoanion.
Perchlorate: [55046-61-2].

Colourless needles (aq. $HClO_4$). Ir $\nu_{C=O}$ 1781s, 1690sh, 1682s, 1660m, 1400s, 1230s cm^{-1}. Forms a double salt with $2NaClO_4$.
Weighardt, K. *et al, Z. Naturforsch., B*, 1974, **29**, 809 (*synth, ir*)

IC-003383

$C_2H_{16}N_{10}OS_2Zr$

Tetrakis(hydrazine-*N*)oxobis(thiocyanato-*N*)zirconium(*IV*), 11CI

Tetrakis(hydrazine)bis(isothiocyanato)oxozirconium(IV)

[81599-29-3]

$(H_2NNH_2)_2ZrO(NCS)_2$

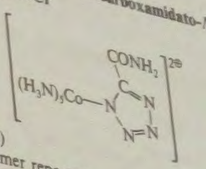
M 351.5
Synth. by reaction of hydrazine with $ZrO(NCS)_2$ in EtOH. Mp 210° dec.

Srivastava, A.K. *et al, Transition Met. Chem.*, 1982, **7**, 41 (*synth, ir, thermal dec*)

IC-003384

$C_2H_{17}CoN_{10}O^{2\oplus}$

Pentaammine(1*H*-tetrazole-5-carboxamidato-N^4)cobalt(*III*)(2+), 11CI



M 256.1 (ion)
Only one isomer reported.
Bis-tetrafluoroborate: [79717-55-8].

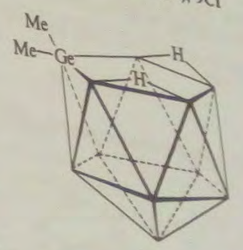
Balahura, R.J. *et al, Inorg. Chem.*, 1983, **22**, 3602 (*synth, pmr, cmr, redox kinetics*)

IC-003385

$C_2H_{18}B_{10}Ge$

7,7-Dimethyl-7-germaundecaborane(14), 9CI

[34514-72-2]

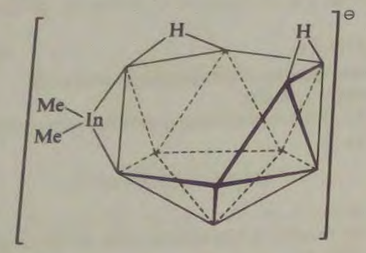


M 222.8
Proposed struct. shown. White solid. Mp 82-83°. Reasonably stable in air.

Loffredo, R.E. *et al, J. Am. Chem. Soc.*, 1971, **93**, 5587 (*synth, pmr, nmr, ms*)

$C_2H_{18}B_{10}In^{\ominus}$ IC-003386

[η^4-Dodecahydrodecaborato(2−)]dimethylindate(1−), 9CI



M 265.0 (ion)

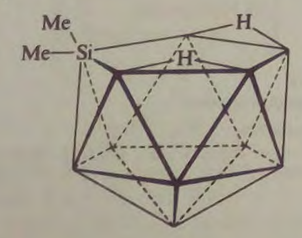
Dimethylindium(1+) salt: [55988-45-9].
$C_4H_{24}B_{10}In_2$ M 409.9
Pale-yellow cryst. Sol. Me_2CO, insol. C_6H_6.

Greenwood, N.N. *et al, J. Chem. Soc., Dalton Trans.*, 1975, 299 (*synth, ir, B-11 nmr, pmr*)

$C_2H_{18}B_{10}Si$ IC-003387

7,7-Dimethyl-7-silaundecaborane(14), 10CI

[65554-56-5]



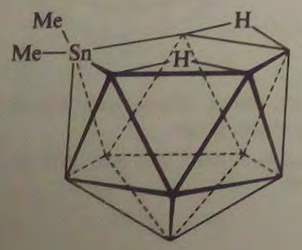
M 178.3
nido-. Synth. from $Na_2B_{10}H_{12}$ + Me_2SiCl_2 in C_6H_6 at 60°. Purif. by subl. Mp 59-60°.

Norman, A.D. *et al, Inorg. Nucl. Chem. Lett.*, 1977, **13**, 599 (*synth, pmr, B-11 nmr*)

$C_2H_{18}B_{10}Sn$ IC-003388

7,7-Dimethyl-7-stannaundecaborane(14), 9CI

[34514-71-1]

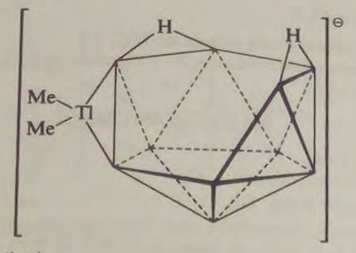


M 268.9
Proposed struct. shown. White solid. Mp 123-124°. Reasonably stable in air.

Loffredo, R.E. *et al, J. Am. Chem. Soc.*, 1971, **93**, 5587 (*synth, pmr, nmr, ms*)

$C_2H_{18}B_{10}Tl^{\ominus}$ IC-003389

[η^4-Dodecahydrodecaborato(2−)]dimethylthallate(1−), 9CI



M 354.6 (ion)

▷ Toxic.

Dimethylthallium(1+) salt:
$C_4H_{24}B_{10}Tl_2$ M 589.1
Large-waxy yellow plates. Sol. THF.

$MePh_3P$ salt: [58776-50-4].
Yellow cryst. (CH_2Cl_2, Et_2O at 0°).

Greenwood, N.N. *et al, J. Chem. Soc., Dalton Trans.*, 1975, 299 (*synth, ir, B-11 nmr, pmr*)

$C_2H_{18}CoN_5O_2^{2\oplus}$ IC-003390

Acetatopentaamminecobalt(*III*)(2+)

$[Co(NH_3)_5OAc]^{2\oplus}$

M 203.1 (ion)
Prob. octahedral with monodentate acetate.

Dinitrate: Red cryst. Sl. sol. H_2O.

Inorg. Synth., 1953, **4**, 171 (*synth*)

$C_2H_{18}CoN_5O_5P^{\oplus}$ IC-003391

(Acetylphosphato)pentaamminecobalt(*III*)(1+)

[*Aceticphosphoricmonoanhydridato*(2−)-O]*pentaamminecobalt*(III)(1+)

[79737-95-4]

$[Co[OP(O)_2OAc](NH_3)_5]^{\oplus}$

M 282.1 (ion)

Perchlorate: Pink solid (aq. EtOH). Sol. H_2O.

Buckingham, D.A. *et al, Aust. J. Chem.*, 1981, **34**, 1769 (*synth, ir, uv, pmr, kinetics*)

$C_2H_{18}CoN_6^{3\oplus}$ IC-003392

(Acetonitrile)pentaamminecobalt(*III*)(3+), 10CI

[44819-13-8]

$[Co(NH_3)_5(NCCH_3)]^{3\oplus}$

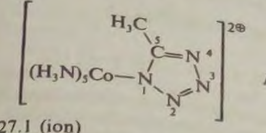
M 185.1 (ion)
Octahedral cation.

Diperchlorate, trifluoromethanesulfonate: [75522-58-6].
Yellow solid. Sol. H_2O.

Dixon, N.E. *et al, Inorg. Chem.*, 1981, **20**, 470 (*synth, uv, pmr*)

$C_2H_{18}CoN_9^{2\oplus}$ IC-003393

Pentaammine(5-methyl-1*H*-tetrazolato)cobalt(*III*)(2+), 11CI



N^1-bonded-form

M 227.1 (ion)
Ligand can coordinate through any N.

N^1-bonded-form

Diiodide, pentahydrate: Sol. H_2O, DMSO.
Diperchlorate: [84927-29-7].
Insol. H_2O.

N^2-bonded-form

Diiodide: [79899-68-6].
Sol. H_2O, DMSO.
Diperchlorate: [84927-31-1].
Insol. H_2O.

Ellis, W.R. *et al, Inorg. Chem.*, 1982, **21**, 835 (*synth, uv, pmr*)
Purcell, W.L., *Inorg. Chem.*, 1983, **22**, 1205 (*isom, kinetics*)

$C_2H_{18}CrN_5O_2^{2\oplus}$ IC-003394

(Acetato-*O*)pentaamminechromium(*III*)(2+), 10CI, 9CI

[27842-83-7]

$[Cr(OAc)(NH_3)_5]^{2\oplus}$

M 196.1 (ion)
Many analogous compds. known.

Diperchlorate: [22792-96-7].
Synth. from the dinitrate and aq. $NaClO_4$. Orange cryst.

Dinitrate: Synth. from $[Cr(OH_2)(NH_3)_5](NO_3)_3.NH_4NO_3$ and NaOAc in dimethylacetamide. Orange cryst. (aq. NH_4NO_3).

Zinato, E. *et al, Inorg. Chem.*, 1972, **11**, 1746 (*synth, aquation, uv*)
Jackman, L.M. *et al, Inorg. Chem.*, 1979, **18**, 1497 (*synth*)
Compr. Coord. Chem., Pergamon, Oxford, 1987, **3**, 780 (*rev*)

$C_2H_{18}IrN_6^{3\oplus}$ IC-003395

(Acetonitrile)pentaammineiridium(*III*)(3+), 10CI

Pentaammine(methyl cyanide)iridium(3+)

$[Ir(NH_3)_5(NCCH_3)]^{3\oplus}$

M 318.4 (ion)
Octahedral cation.

Triperchlorate: [73453-89-1].
White solid. Sol. H_2O.
▷ Potentially explosive.

Foust, R.D. *et al, Inorg. Chem.*, 1972, **11**, 899 (*synth, ir, uv*)
Talebinasab-sarvari, M. *et al, Inorg. Chem.*, 1980, **19**, 1835 (*synth, photochem, uv*)

$C_2H_{18}N_5O_2Rh^{2\oplus}$ IC-003396

Acetatopentaamminerhodium(*III*)(2+), 8CI

$[Rh(NH_3)_5OAc]^{2\oplus}$

M 247.1 (ion)

Diperchlorate: [14567-09-0].
White cryst. Sol. H_2O.
▷ Potentially explosive.

Monacelli, F. *et al, J. Inorg. Nucl. Chem.*, 1962, **24**, 1241; 1967, **29**, 1079 (*synth, uv, hydrol, kinetics*)

$C_2H_{18}N_5O_3Ru^{\oplus}$ IC-003397

(Acetato-*O*)pentaammineruthenium(*II*)(1+)

Pentaammine(ethanoato)ruthenium(II)

$[Ru(NH_3)_5OAc]^{\oplus}$

M 245.2 (ion)
Pseudo-octahedral; undergoes rapid aquation (rate constant $<5\ s^{-1}$). Prepd. by the electrochemical reduction of (Acetato-*O*)pentaammineruthenium(*III*)(2+), IC-003398. Only obsd. in soln. Sol. H_2O.

Stritar, J.A. *et al, Inorg. Chem.*, 1969, **8**, 2281 (*synth, electrochem, uv, aquation*)

$C_2H_{18}N_5O_3Ru^{2\oplus}$ IC-003398

(Acetato-*O*)pentaammineruthenium(*III*)(2+), 9CI

Pentaammineethanoatoruthenium(III)

[38744-91-1]

$[Ru(NH_3)_5(OAc)]^{2\oplus}$

M 245.2 (ion)
Readily reduced by common one-electron reducing agents; undergoes a wide range of anation and aquation reactions.

Diperchlorate: Prepd. either by heating $[Ru(NH_3)_5Cl]Cl_2$ with conc. NH_3, followed by glacial HOAc and $Na[ClO_4]$; or by oxidising the ruthenium(*II*) analogue. Yellow solid.
▷ Potentially explosive.

Stritar, J.A. *et al, Inorg. Chem.*, 1969, **8**, 2281 (*synth, uv, reactions*)
Lin, S.-W. *et al, Inorg. Chim. Acta*, 1971, **5**, 290 (*synth, uv*)

$C_2H_{18}N_6Ru^{2\oplus}$ IC-003399

(Acetonitrile)pentaammineruthenium(*II*)(2+), 9CI

Pentaammine(ethanenitrile)ruthenium(II)

[26540-31-8]

$[Ru(NH_3)_5N{\equiv}CCH_3]^{2\oplus}$

M 227.2 (ion)
Octahedral. Prepd. by treatment of Pentaammine(aqua) ruthenium(*II*)(2+), IC-019980 with MeCN or by treating Hexaammineruthenium(*III*)(3+), IC-020001 with $MeCHO/OH^{\ominus}$, followed by O_2 or H_2O_2. Sol. H_2O.

Dichloride:
$C_2H_{18}Cl_2N_6Ru$ M 298.1
Yellow. Ir ν_{CN} 2237 cm^{-1} (nujol).

Dibromide: Yellow salt. Ir ν_{CN} 2238 cm^{-1} (nujol).

Diiodide:
$C_2H_{18}I_2N_6Ru$ M 481.0
Yellow-green salt. Ir ν_{CN} 2239 cm^{-1} (nujol).

Bis-tetrafluoroborate: Yellow salt. Ir ν_{CN} 2253 cm^{-1} (nujol).

Bis-hexafluorophosphate: Yellow salt. Ir ν_{CN} 2277 cm^{-1} (nujol).

Clarke, R.E. *et al, Inorg. Chem.*, 1970, **9**, 227 (*synth, ir, uv, reaction*)

Battistoni, C. *et al*, *Inorg. Chim. Acta*, 1977, **21**, L25 (*pe*)

$C_2H_{19}CoN_9^{3\oplus}$ IC-003401

Pentaammine(*N*-cyanoguanidine)cobalt(*III*)(3+), 8CI

[31253-58-4]

$[Co[N{\equiv}CN{=}C(NH_2)_2](NH_3)_5]^{3\oplus}$

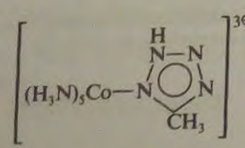
M 228.1 (ion)
Octahedral geometry. Kinetics of the Cr(*II*) reduction for this complex have been studied.

Triperchlorate: Solid. Sol. DMSO.
▷ Potentially explosive.

Balahura, R.J. *et al*, *J. Am. Chem. Soc.*, 1971, **93**, 625 (*synth, ir, uv, pmr, kinetics*)

$C_2H_{19}CoN_9^{3\oplus}$ IC-003402

Pentaammine(5-methyl-1*H*-tetrazole-N^1)cobalt(*III*)(3+), 11Cl



M 228.1 (ion)
Prepd. as an intermed. in the acid dissoc. of $[(NH_3)_5Co(N_4CCH_3)](ClO_4)_2$ in aq. $HClO_4$.

Triperchlorate: Present in soln., not isol.

[84927-27-5, 84943-93-1]

Ellis, W.R. *et al*, *Inorg. Chem.*, 1982, **21**, 835 (*synth*)

$C_2H_{21}CoN_5OS^{3\oplus}$ IC-003403

Pentaammine(dimethyl sulfoxide)cobalt(*III*)(3+)

Pentaammine[sulfinylbis[methane]-O]cobalt(3+), 10Cl

[44915-85-7]

$[Co(NH_3)_5O{=}SMe_2]^{3\oplus}$

M 222.2 (ion)

Tris-trifluoromethanesulfonate: [75522-60-0].
Red violet cryst. Sol. H_2O, DMSO.

Dixon, N.E. *et al*, *Inorg. Chem.*, 1981, **20**, 470 (*synth, uv, pmr, kinetics*)

$C_2H_{21}N_5ORuS^{2\oplus}$ IC-003404

Pentaammine(dimethyl sulfoxide-*S*)ruthenium(*II*)(2+)

Pentammine[sulfinylbis[methane]-S]ruthenium(2+), 9Cl

$[Ru(NH_3)_5S(O)Me_2]^{2\oplus}$

M 264.3 (ion)
Pseudo-octahedral with Ru—S 218.8; S—O 152.7 Ru—$N_{trans toS}$ 220.9 Ru—$N_{trans toN}$ 216.9 pm. Prepd. by treating aq. Pentaammine(dinitrogen)ruthenium(*II*)(2+), IC-019958 or Pentaammine(aqua)ruthenium(*II*)(2+), IC-019980 with DMSO. Sol. H_2O, DMSO.

Diiodide: [17457-16-8].
$C_2H_{21}I_2N_5ORuS$ M 518.1
Yellow cryst.

Bis-tetrafluoroborate: Yellow cryst.

Bis-hexafluorophosphate: [17457-17-9].
Yellow cryst.

Allen, A.D. *et al*, *J. Am. Chem. Soc.*, 1967, **89**, 5595 (*synth, ir*)

Pentaammine(ethanethiol)ruthenium(*II*)(2+), 9Cl

$[Ru(NH_3)_5S(H)Et]^{2\oplus}$

M 248.3 (ion)
Pseudo-octahedral. Prepd. by heating Pentaammine(aqua) ruthenium(*II*)(2+), IC-019980 with ethanethiol. Sol. H_2O. pK_a 9.2.

Bis-tetrafluoroborate: [58619-15-1].
Yellow cryst.

Kuehn, C.G. *et al*, *J. Am. Chem. Soc.*, 1976, **98**, 689 (*synth, ir, uv, pmr, raman, electrochem*)

$C_2H_{21}N_5RuS^{3\oplus}$ IC-003407

Pentaammine(dimethyl sulfide)ruthenium(*III*)(3+)

Pentaammine[thiobis[methane]]ruthenium(3+), 9Cl

[69204-65-5]

$[Ru(NH_3)_5SMe_2]^{3\oplus}$

M 248.3 (ion)

Prepd. by the chemical (Ce(*IV*), O_2 or H_2O_2) or electrochemical oxidation of Pentaammine(dimethyl sulfide)ruthenium(*II*)(2+), IC-003405. Orange aq. soln.; not isol. Sol. H_2O.

Stein, C.A. *et al*, *Inorg. Chem.*, 1979, **18**, 1168, 2212 (*synth, uv, electrochem*)

$C_2H_{21}N_5RuSe^{2\oplus}$ IC-003408

Pentaammine(dimethyl selenide)ruthenium(*II*)(2+)

Pentaammine[selenobis[methane]]ruthenium(2+), 10Cl

[69204-61-1]

$[Ru(NH_3)_5SeMe_2]^{2\oplus}$

M 295.2 (ion)
Prepd. by treating Pentaammine(aqua)ruthenium(*II*)(2+), IC-019980 with $SeMe_2$. Sol. H_2O.

Bis-hexafluorophosphate: [69204-62-2].
Yellow cryst.

Stein, C.A. *et al*, *Inorg. Chem.*, 1979, **18**, 1168 (*synth, uv, electrochem*)

$C_2H_{21}N_5RuSe^{3\oplus}$ IC-003409

Pentaammine(dimethyl selenide)ruthenium(*III*)(3+)

Pentaammine[selenobis[methane]]ruthenium(3+), 10Cl

[69204-64-4]

$[Ru(NH_3)_5SMe_2]^{3\oplus}$

M 295.2 (ion)
Prepd. by the chemical (Ce(*IV*), O_2 or H_2O_2) or electrochemical oxidation of Pentaammine(dimethyl selenide)ruthenium(*II*)(2+), IC-003408. Not isol. as a solid salt. Sol. H_2O.

Stein, C.A. *et al*, *Inorg. Chem.*, 1979, **18**, 1168 (*synth, uv, electrochem*)

$C_2H_{21}N_5RuTe^{2\oplus}$ IC-003410

Pentaammine(dimethyl telluride)ruthenium(*II*)(2+)

Pentaammine[tellurobis(methane)]ruthenium(2+), 10Cl

[69204-59-7]

$[Ru(NH_3)_5TeMe_2]^{2\oplus}$

M 343.8 (ion)
Prep. by treating Pentaammine(aqua)ruthenium(*II*)(2+), IC-019980 with $TeMe_2$. Sol. H_2O.

Bis-hexafluorophosphate: [69204-60-0].
Yellow salt.

Stein, C.A. *et al*, *Inorg. Chem.*, 1979, **18**, 1168 (*synth, uv, electrochem*)

$C_2H_{21}N_5RuTe^{3\oplus}$ IC-003411

$C_2I_4O_2Rh^{\ominus}$
Dicarbonyltetraiodorhodate(1−), 10CI
Tetraiododicarbonylrhodate(1−)

$[RhI_4(CO)_2]^{\ominus}$

M 666.5 (ion)
Catalyst for the water-gas shift reaction and for hydrogenolysis of MeOH.

cis-form
Isom. to the *trans*-form within a few minutes at r.t.
Et_4N salt: [24596-69-8].

Characterised spectroscopically. Ir ν_{CO} 2122, 2092 cm^{-1} ($CHCl_3$).

trans-form [44769-93-9]
Tetrapropylammonium salt: [55634-00-9].
Black cryst. (CH_2Cl_2/CCl_4). Ir ν_{CO} 2091 cm^{-1} (CH_2Cl_2).
Tetrabutylammonium salt: [55634-01-0].
Black cryst.
Ph_4As salt: [26004-02-4].
Black cryst.

Dicarbonyltetraiodoruthenate(2−), 8CI **IC-003444**
$[Ru(CO)_2I_4]^{2\ominus}$

M 664.7 (ion)

cis-form
Di-Cs salt: [16369-44-1].
Orange cryst.

Cleare, M.J. *et al, J. Chem. Soc. A*, 1969, 372 (*synth, ir, raman*)
Colton, R. *et al, Aust. J. Chem.*, 1971, **24**, 903 (*ir*)

$C_2I_4O_4Os^{2\ominus}$
Tetraiodo(oxalato)osmate(*IV*)(2−) **IC-003445**
[*Ethanedioato*(2−)-O,O']*tetraiodoosmate*(IV)(2−), *10CI*
[74325-56-7]
As Tetrabromo(oxalato)osmate(*IV*)(2−), IC-002845 with

X = I

M 785.8 (ion)
Synth. from oxalic acid and $K_2[OsI_6]$.
Di-Cs salt: [74325-50-1].
Blue-green.
Bis-(Bu_4N) salt: [74325-57-8].
Ir ν_{Os-I} 178 cm^{-1}.

Homborg, H. *et al, Z. Naturforsch., B*, 1980, **35**, 554 (*synth, ir, uv, raman*)
Preetz, W. *et al, Z. Naturforsch., B*, 1981, **36**, 62 (*synth, ir, uv*)

$C_2InN_2O_2^{\ominus}$
Bis(cyanato-*O*)indate(1−) **IC-003446**
Di(cyanato)indate(1−)

$[In(OCN)_2]^{\ominus}$

M 198.8 (ion)
Synth. from $[Et_4N][InCl_2]$ and Na[NCO]. Not clear whether ligand bound through O or N.
Et_4N salt: [60131-20-6].
Colourless moisture-sensitive cryst. (EtOH).

Habeeb, J.J. *et al, J. Chem. Soc., Dalton Trans.*, 1976, 866 (*synth, ir*)

$C_2InN_2S_2^{\ominus}$
Bis(thiocyanato-*S*)indate(1−) **IC-003447**

$[In(SCN)_2]^{\ominus}$

M 230.9 (ion)
Synth. from $[Et_4N][InCl_2]$ and Na[NCS]. Not clear whether ligand bound through N or S.
Et_4N salt: [60131-18-2].

Colourless moisture-sensitive cryst. (EtOH).

Habeeb, J.J. *et al*, *J. Chem. Soc., Dalton Trans.*, 1976, 866 (*synth, ir*)

IC-003448

$C_2K_2O_4$

Potassium oxalate

Oxalic acid, dipotassium salt, 8CI. Ethanedioic acid, dipotassium salt, 9CI

[583-52-8]

$K_2(C_2O_4)$

M 166.2

Synth. by reaction of KOH with aq. oxalic acid, cryst. as monohydrate which dehydrates at ~ 100°. Hygroscopic colourless orthorhombic cryst. Becomes tetragonal at 381°. Dec. above 470° to CO and K_2CO_3. ΔH_f° −1342 kJ mol^{-1}.

▷ RO2885000.

Monohydrate: [6487-48-5].
$C_2H_2K_2O_5$ M 184.2
Commercially available. Cryst. from aq. solns. of $K_2C_2O_4$. White monoclinic cryst.; hygroscopic. Dec. on heating with H_2O loss (− H_2O at ~ 100°). V. sol. H_2O (33 g per 100 cm^3 at 16°). ΔH_f° −1641 kJ mol^{-1}.

▷ Irritant.

IC-003451

C_2MnN_2

Manganese(*II*) cyanide ($Mn(CN)_2$)

$Mn(CN)_2$

M 106.9

Mentioned in the older literature but the pure compd. has not been isol. Some adducts with NH_3, DMSO, DMF have been described. Treatment of $K_3Mn(NO)(CN)_5$ with H_2 at 330° gives a dark brown solid of empirical formula $Mn(CN)_{2.1}$. μ_{eff} = *ca.* 4.23μ_B; Ir ν_{CN} 2140 cm^{-1}.

DMSO complex: see *Dicyano(dimethyl sulfoxide) manganese*(II), *IC-004019*

DMF complex: [71072-53-2].
Synth. from $MnCl_2$ and $[NH_4]CN$ in DMF.

Diammine complex: Obt. from corresp. hexaammine complex. Oxygen and moisture sensitive pale yellow green solid. Magnetic data indicate formulation $[Mn(NH_3)_4][Mn(CN)_4]$? with high spin cation and low spin cation. Hydrol. with H_2O gives dark green solid of composition $Mn(CN)_2$.

Hexaammine complex:
$C_2H_{18}MnN_8$ M 209.1
Synth. from $Mn(NCS)_2$ and KCN in liq. NH_3 at −40°. Oxygen and moisture sensitive bright pink solid. Loses NH_3 *in vacuo* to form $Mn(CN)_2(NH_3)_2$.

Nast, R. *et al*, *Z. Anorg. Allg. Chem.*, 1957, **293**, 322 (*synth, hexaammine complex*)

IC-003452

$C_2MnN_2O_4^{\ominus}$

Dicarbonyldinitrosylmanganate(1−)

$[Mn(CO)_2(NO)_2]^{\ominus}$

M 170.9 (ion)

Bis(triphenylphosphine)iminium salt: [79061-79-3].
Synth. from $[Mn(CO)_6]BF_4$ and $[Ph_3PNPPh_3]NO_2$ in MeCN. Orange.

Stevens, R.E. *et al*, *J. Am. Chem. Soc.*, 1981, **103**, 4981.
Stevens, R.E. *et al*, *Inorg. Chem.*, 1983, **22**, 2034 (*cryst struct*)

IC-003453

$C_2MnN_2S_2$

Manganese(*II*) thiocyanate

Bis(thiocyanato) manganese, 8CI. Dithiocyanatomanganese

[25853-88-7]

$Mn(SCN)_2$

M 171.1

Ir spectra suggest tetragonal coordination with SCN bridges. Synth. from $MnCl_2$ or $Mn(NO_3)_2$ and KSCN in EtOH followed by drying *in vacuo* at 110° over P_2O_5. Sol. H_2O, EtOH, liq. NH_3. Reacts with Br_2 (g) to give Mn(SCN)Br. $Mn(SCN)_2.3H_2O$ is described in the older literature.

Sundheim, B.R., *Anal. Chem.*, 1958, **30**, 1892 (*esr*)

IC-003455

C_2MnO_4

Manganese(*II*) oxalate

[Ethanedioato(2−)-O,O′]manganese, 11CI

[640-67-5]

$Mn(O_2CCO_2)$

M 142.9

Pink cryst. Synth. by heating dihydrate in N_2 for 2hr at 200°. ΔH_{298}° −1087.3 kJ mol^{-1}.

Manganese(II) oxalate dihydrate [6556-16-7]
Diaqua[ethanedioato(2−)-O,O′]manganese, 11CI
$C_2H_4MnO_6$ M 178.9
Possesses polymeric chain struct. with *trans*-octahedral Mn and bridging oxalate groups. ΔH°_{298} −1624.5 kJ mol^{-1}.

α-form: Formed from damp trihydrate at r.t., or from aq. solns. of $Mn^{2\oplus}$ and $C_2O_4^{2\ominus}$ above 30° at pH 1.5. Monoclinic colourless cryst.

γ-form: Formed from aq. solns. of $Mn^{2\oplus}$ and $C_2O_4^{2\ominus}$ above 30° at pH 3-6. Orthorhombic pink cryst. More thermally stable than α-form.

Manganese(II) oxalate trihydrate [74174-53-1]
[Ethanedioato(2−)-O,O′]manganese trihydrate
$C_2H_6MnO_7$ M 213.0
Synth. by mixing aq. solns. of $Mn^{2\oplus}$ and $C_2O_4^{2\ominus}$ below 30° at pH 1.5-6. Orthorhombic pink prisms.

[55703-32-7, 88682-90-0]

C_2N_2

Cyanogen

Ethanedinitrile, 9CI. Oxalonitrile. Dicyanogen

[460-19-5]

N≡C—C≡N ($D_{\infty h}$)

M 52.0

Interatomic distances: C—C 137 pm, C—N 116 pm.
Synth. from NaCN and $CuSO_4$. Colourless gas. Hydrol. first to oxamide, then to oxalic acid. Sol. H_2O, EtOH, Et_2O. d_4^{21} 0.954. Mp −27.9°. Bp −21.17°. Burns with violet flame → CO_2 + N_2. V.p., 2.4 atm. at 0°. Heating above 400° → Paracyanogen, a polymer which reverts to cyanogen. at 500°.

▷ Toxic vapour, irritant. Extremely flammable. GT1925000.

IC-003466

$C_2N_2O_2S_2U$

Dioxobis(thiocyanato-*S*)uranium(*VI*)

Uranyl thiocyanate

[21696-47-9]

$UO_2(SCN)_2$

M 386.1
Usually obt. as trihydrate. V. dark green solid. Virt. insol. H_2O. Reacts with range of donor ligands, forming adducts.

Trihydrate: [83650-98-0].
Orange powder. Sol. H_2O. Ir $\nu_{C\equiv N}$ 937 cm^{-1}; $\nu_{C=N}$ 2057 cm^{-1}. Loses H_2O of cryst. at 85-125°.

IC-003471

$C_2N_2PbS_2$

Lead(*II*) thiocyanate

Thiocyanic acid, lead(2+) salt, 9CI

[592-87-0]

$Pb(SCN)_2$

M 323.3
Synth. by mixing aq. solns. of NaSCN and $Pb(NO_3)_2$. White needles. Light sensitive. Insol. H_2O. Mp 190° dec.

▷ Toxic. XL1538000.

Inorg. Synth., 1939, **1**, 55 (*synth*)
Mokuolu, J.A.A. *et al, Acta Crystallogr., Sect. B*, 1975, **31**, 172 (*cryst struct*)

IC-003472

C_2N_2Pd

Palladium(*II*) cyanide ($Pd(CN)_2$), 8CI

[2035-66-7]

$Pd(CN)_2$

M 158.4
Probably polymeric struct. Few modern studies. *Synth.* from $Pd^{2\oplus}$(aq.) + $Hg(CN)_2$. Yellow solid.

[69860-44-2]

Sidgwick, N.V., *The Chemical Elements and their Compds.*, Oxford, 1950, 1561.

IC-003473

$C_2N_2Pt^{2\ominus}$

Dicyanoplatinate(2−), 8CI

$[Pt(CN)_2]^{2\ominus}$

M 247.1 (ion)
Probably has polymeric struct. *Synth.* from Tetrakis(cyano-*C*)platinate(2−), IC-004558 + K/NH_3.

Bis-Ph_4P salt: [22784-73-2].
Brick red solid.

Nast, R. *et al, Chem. Ber.*, 1969, **102**, 1050 (*synth*)

IC-003474

C_2N_2Pt

Platinum(*II*) cyanide ($Pt(CN)_2$)

[592-06-3]

$Pt(CN)_2$

M 247.1
Synth. from Tetrachloroplatinate(*II*)(2−), IC-017117 + $Hg(CN)_2$. Reacts with KCN → Tetrakis(cyano-*C*)platinate(2−), IC-004558. Pale yellow solid. Insol. H_2O, acids, alkalis.

Gmelin Handbook Inorg. Chem., Syst. No. 68, 1940, C, 123 (*rev, bibl*)
Sidgwick, N.V., *The Chemical Elements and their Compds.*, Oxford, 1950, 1582.

IC-003475

C_2N_2S
Sulfur dicyanide
Sulfur cyanide ($S(CN)_2$). *Dicyano sulfide. Dicyanosulfane*

N≡C—S—C≡N (C_{2v})

M 84.1
Interatomic distances: N—C 115.7, C—S 170.1 pm. Formed from AgCN + SCl_2 in CS_2. Colourless cryst. solid, dec. in air. V. sol. Et_2O, CS_2. Mod. sol. H_2O. Mp 64°.

Long, D.A. *et al, Spectrochim. Acta*, 1963, **19**, 1731 (*synth, ir, raman*)
Pierce, L. *et al, J. Chem. Phys.*, 1965, **43**, 3423 (*struct*)

IC-003480

$C_2N_2S_3$
Trisulfur dicyanide
Dicyanotrisulfane. Dicyano trisulfide
[57670-85-6]

N≡CSSSC≡N

M 148.2
Synth. from S_2Cl_2 + AgCN in CS_2. White cryst. stable at −20°. Polym. on heating. Dec. by H_2O. Sol. Et_2O, $CHCl_3$, C_6H_6. Mp 93°.

Feher, F. *et al, Z. Anorg. Allg. Chem.*, 1964, **327**, 151 (*synth, cryst struct*)

IC-003481

$C_2N_2S_4$
Tetrasulfur dicyanide
Dicyanotetrasulfane. Dicyano tetrasulfide

N≡CSSSSC≡N

M 180.2
Formed from S_2Cl_2 + $Hg(SCN)_2$. Colourless cryst. Readily polym. to other cyanosulfanes. Dec. by H_2O. Sol. $CHCl_3$, CCl_4, CS_2. Mp −3.3°.

Feher, F. *et al, Chem. Ber.*, 1958, **91**, 642 (*synth, ir, raman*)
Gmelin Handbook Inorg. Chem., Syst. No. 14, 1977, **D5**, 235 (*bibl*)

C_2N_2Se
Selenium dicyanide IC-003482
Dicyano selenide. Selenium(II) *cyanide. Dicyanoselane*

N≡C—Se—C≡N (C_{2v})

M 130.9
Formed from $SeCN^{\ominus}$ + N_2O_4 or from BrCN + KSeCN. Colourless cryst.

Aynsley, E.E. *et al, J. Chem. Soc.*, 1964, 704 (*synth*)
Hange, S., *Acta Chem. Scand.*, 1971, **25**, 3081 (*synth, reactions*)
Moran, M. *et al, J. Organomet. Chem.*, 1979, **165**, 215 (*metal complexes*)

$C_2N_2Se_2$
Diselenium dicyanide IC-003483
Dicyanodiselane. Dicyano diselenide
[2180-01-0]

N≡CSeSeC≡N

M 209.9
Formed from 2AgSeCN + I_2 in Et_2O. Yellow cryst. Sol. org. solvs. Dec. at 20° to $Se(CN)_2$ + $Se_3(CN)_2$.

Birckenbach, L. *et al, Ber.*, 1925, **58**, 786 (*synth*)
Aynsley, E.E. *et al, J. Chem. Soc.*, 1964, 704 (*synth, ir*)

C_2N_2Sn
Tin(*II*) cyanide IC-003485
Bis(cyano-C)tin
[35667-77-7]

$Sn(CN)_2$

M 170.7
Prepd. by addition of HCN to a THF soln. of bis(methylcyclopentadienyl)tin. White solid. Air-sensitive.

Harrison, P.G. *et al, J. Chem. Soc., Dalton Trans.*, 1973, 940 (*synth, mössbauer, ir*)

C_2N_2Te
IC-003488
Tellurium dicyanide
Dicyano telluride. Tellurium(II) *cyanide. Dicyanotellane*
[14453-24-8]

N≡C—Te—C≡N

M 179.6
Synth. from $TeBr_4$ + AgCN in C_6H_6. Orange solid. Sol. Et_2O. Subl. 120° in vacuo. Dec. at 80°.

Cockerage, H.E., *J. Chem. Soc.*, 1968, **90**, 2075 (*synth*)
Aranda, T. *et al, Acta Chem. Scand., Ser. A*, 1974, **28**, 891 (*synth, reactions*)

C_2N_2Vo
Bis(cyano-Cyanamidato(2−), 11Cl IC-003487
Dicyanoamidato(2−)

$[V(CN)_2]^{2\ominus}$

M 102.9 (ion)
No struct. reported.
Di-K salt, hemiammoniate: [82720-69-3]
Synth. by K reduction of VBr_3 + KCN in liq. NH_3. Dark brown solid. Paramagnetic, μ_{eff} = 1.86 μ_B, S = 1/2. 2.09Å. Oxidised to Tetrakis(cyano-Cyanamidato)*II*(2−), IC-004567 by $[NH_4]CN$.
▷ Cyanides are toxic.

Dodsworth, E.S. *et al, Inorg. Chim. Acta*, 1982, **61**, 9 (*synth, ir, magnetism, uv-vis*)

C_2N_2Zn
Zinc cyanide
[557-21-1]

IC-003489

$Zn(CN)_2$

M 117.4
Cu_2O struct. Colourless cryst. Insol. EtOH, sol. aq. alkali cyanide and aq. NH_3, spar. sol. H_2O (5 × 10^{-4} g in 100 cm^3 at 20°). Mp 800° dec.
▷ Reported to be tasteless but poisonous. ZH 1 575000.

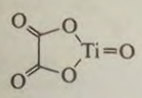
C_2O_5Ti

(Oxalato)oxotitanium(*IV*)

[*Ethanedioato*(2−)-O,O′]*oxotitanium*(IV), *11CI*

[31363-92-5]



M 151.8
Catalyst for polyester manuf.

Dihydrate: [80528-91-2].
Commercially available. White solid (H_2O). Forms Ti(*III*) on thermal dec.

Hydrate: [25592-02-3].
Synth. by precipitating titanium from $TiCl_4$ and dissolving the precipitate in saturated aq. oxalic acid. White solid.

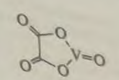
C_2O_5V

(Oxalato)oxovanadium(*IV*)

[*Ethanedioato*(2−)-O,O′]*oxovanadium*(IV), *11CI. Vanadyl oxalate*

[15500-04-6]



M 154.9
Synth. from V_2O_5 and $H_2C_2O_4$ in H_2O, or from V_2O_5 and $H_2C_2O_4$ in AcOH. Used in various catalytic processes including hydrocracking and EtOH to butadiene conversion. Also used to make V- containing metallurgical pellets. Blue solid.

Monohydrate: [39237-68-8].
Synth. from V_2O_5 and $H_2C_2O_4$.$2H_2O$ in AcOH at 108-118°.

Dihydrate: [39237-67-7].
Synth. analogously to monohydrate. A tetrahydrate is also known.

U.S. Pat., 3 689 515, (1972); *CA*, **78**, 15533k (*synth, anhyd form, hydrates*)
Netherlands Pat., 74 11 144, (1976); *CA*, **85**, 149641x (*use*)

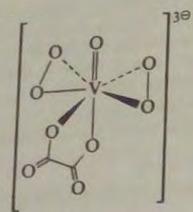
(Oxalato)oxodiperoxovanadate(*V*)(3−)
[Ethanedioato(2−)-O,O′]oxodiperoxyvanadate(V)(3−), *11Cl.*
Oxalatooxobis(peroxo)vanadate(V)(3−).
Oxobis(peroxo)oxalatovanadate(V)(3−).
Oxalatooxobis(peroxo)vanadate(V)(3−)
[68782-48-9]



M 218.9 (ion)
Distorted pentagonal bipyramid.
Tri-K salt: [42555-08-8].
Synth. by dissolving V_2O_5 in KOH, adding $H_2C_2O_4$ then H_2O_2 or from KVO_3, $K_2C_2O_4.H_2O$ and $H_2C_2O_4$ in H_2O_2. Bleach for colour film. Orange solid (H_2O). According to Vuletic *et al*, a dihydrate is formed. Schwendt *et al* report that use of $H_2C_2O_4$ yields $K_3[VO(O_2)(C_2O_4)_2]$.
Tri-K salt, monohydrate: [55101-83-2].
Synth. as for the anhydrous salt. Image intensifier for colour film. Orange cryst. It appears that Vuletic *et al* synthesised the monohydrate.
Tri-K salt, mono-H_2O_2 (adduct): [88863-83-6].
Orange cryst. Crystallography shows that this is the correct formulation of the species originally said to be $K_3[V(O_2)_3(C_2O_4)]H_2O$.
Tri-NH_4 salt: [42494-74-6].
Synth. by mixing H_2O_2 solns. of NH_4VO_3 and $(NH_4)_2C_2O_4$. Orange solid (H_2O). According to Vuletic *et al*, a dihydrate is formed.

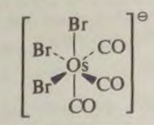
IC-003523

$C_3Br_3O_3Os^{\ominus}$
Tribromotricarbonylosmate(1 −), 9CI



fac-form

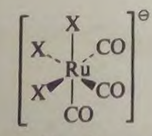
M 513.9 (ion)
Cs salt: [18400-28-7].
$C_3Br_3CsO_3Os$ M 646.8
White cryst. (EtOH).

fac-form
Tetrabutylammonium salt: [58800-94-5].
White.

mer-form
Tetrabutylammonium salt: [58776-23-1].
Bright-yellow.
Cleare, M.J. *et al, J. Chem. Soc. A*, 1969, 372 (*synth, ir, raman*)
Preetz, W. *et al, J. Organomet. Chem.*, 1976, **104**, 79 (*synth, ir, raman*)

IC-003524

$C_3Br_3O_3Ru^{\ominus}$
Tribromotricarbonylruthenate(1 −), 9CI, 8CI
[32423-82-8]



X = Br

M 424.8 (ion)
Cs salt: [22594-82-7].
$C_3Br_3CsO_3Ru$ M 557.7
V. pale-yellow cryst.
Cleare, M.J. *et al, J. Chem. Soc. A*, 1969, 372 (*synth, ir, raman*)
Colton, R. *et al, Aust. J. Chem.*, 1971, **24**, 903 (*synth, ir*)

$C_3Ca_2Na_2O_9$
Calcium sodium carbonate ($Ca_2Na_2(CO_3)_3$) IC-003525
Carbonic acid, calcium sodium salt (3:2:2), 8CI. Disodium dicalcium carbonate ($Na_2Ca_2(CO_3)_3$). Sodium calcium carbonate
[77403-51-1]

$Na_2Ca_2(CO_3)_3$

M 306.1
Synth. by pptn. from aq. solns. containing stoichiometric amounts of Na_2CO_3 and $CaCO_3$ (1:2). Can be used for the generation of laser light. Colourless to pale yellow orthorhombic cryst. with a vitreous lustre. Pyroelectric. Dec. on heating with evolution of CO_2.
Mineral-form [24492-43-1]
Shortite
Wedge-shaped colourless to yellow cryst.
Adler, H.H. *et al, Am. Mineral.*, 1963, **48**, 839 (*ir*)
Dickens, B., *J. Res. Natl. Bur. Stand. (U.S.), Sect. A*, 1971, **75**, 129 (*cryst struct*)

Meisner, L.B., *Opt. Spektrosk.*, 1981, **50**, 412 (*uses*)

$C_3CdHg_3I_5N_3Se_3$
Pentaiodotris(selenocyanato)trimercurycadmium IC-003526
[12542-44-8]

$Hg_3CdI_5(SeCN)_3$

M 1663.6
Contains bridging SeCN groups. Cryst.
Czakis-Sulikowska, M., *Pol. J. Chem. (Rocz. Chem.)*, 1970, **44**, 1571 (*synth, ir*)

$C_3CdN_3^{\ominus}$
Tris(cyano-*C*)cadmate(1 −) IC-003527
[15698-71-2]

$[Cd(CN)_3]^{\ominus}$

M 190.4 (ion)
Various $R_4P^{\oplus}$ salts have been prepd. from $CdSO_4$ + KCN in the presence of a phosphonium salt.
[73338-45-1, 73338-60-0, 73338-61-1, 73338-62-2]
Papp, S. *et al, Z. Anorg. Allg. Chem.*, 1979, **458**, 241 (*synth, ir*)

$C_3CdN_3Se_3^{\ominus}$
Tris(selenocyanato)cadmate(1 −) IC-003528
[18041-35-5]

$[Cd(SeCN)_3]^{\ominus}$

M 427.3 (ion)
K salt: [26024-27-1].
Prepd. from $CdBr_2$ + KSeCN. Colourless cryst. (Me_2CO). Prac. insol. MeOH, EtOH; sol. H_2O, Me_2CO.
Golub, A.M. *et al, Russ. J. Inorg. Chem. (Engl. Transl.)*, 1962, **7**, 279 (*synth*)
Tsintsadze, G.V. *et al, Russ. J. Inorg. Chem. (Engl. Transl.)*, 1970, **15**, 1211 (*ir*)

$C_3CeF_9O_9S_3$
Cerium(*III*) trifluoromethanesulfonate IC-003529
Cerium triflate
[76089-77-5]

$Ce(OSO_2CF_3)_3$

M 587.3
Used in manuf. of antiperspirants and in template synth. Forms adducts with various *O*-donor ligands.
Nonahydrate: [67878-30-2].
$C_3H_{18}CeF_9O_{18}S_3$ M 749.4
Colourless cryst. Sol. H_2O, EtOH, MeCN. Prob contains $[Ce(OH_2)_9]^{3+}$ ions.
[85920-50-9]
Roberts, J.E. *et al, Thermochim. Acta*, 1978, **25**, 233 (*synth, tga*)

$C_3ClFeHgNO_4$
Tricarbonyl(chloromercurio)nitrosyliron, 8Cl IC-003531
[28407-13-8]

$ClHgFe(CO)_3NO$

M 405.9
Unstable, characterised spectroscopically.
Casey, M. *et al, J. Chem. Soc. A*, 1970, 2258 (*synth, ir*)

C_3ClIrO_3
Tricarbonylchloroiridium(*I*) IC-003532
[32594-40-4]

$[IrCl(CO)_3]_n$

M 311.7
Polymeric. Crystals consist of staggered nonequiv. planar $Ir(CO)_3Cl$ molecules stacked forming parallel chains of Ir atoms. Useful starting material for iridium chlorocarbonyl complexes; catalyst for water gas shift reaction. Highly conducting brown-violet needles with metallic lustre. Subl. in CO.
[28700-98-3]

$C_3ClNiO_3^{\ominus}$ IC-003533

Tricarbonylchloronickelate(1 –), 8CI

Chlorotricarbonylnickelate(1 –)

$[Ni(CO)_3Cl]^{\ominus}$ (C_{3v})

M 178.1 (ion)

Catalyst for carbonylation of benzyl chloride and carbonylation with acetylene insertion of acyl halides. Anion stable in air-free soln. even at 70-80°.

Tetrabutylammonium salt: [27116-03-6].
Not stable in the pure state.

Benzyltrimethylammonium salt: [27116-04-7].
Not stable in the pure state.

Cassar, L. *et al*, *Inorg. Nucl. Chem. Lett.*, 1970, **6**, 291 (*synth, ir*)

C_3ClO_3Rh IC-003534

Tricarbonylchlororhodium, 9CI

Chlorotris(carbonyl)rhodium

[37780-59-9]

$Rh(CO)_3Cl$

M 222.3

Catalyst for the polymerisation of propadiene. Unstable in the absence of a high CO pressure. Ir ν_{CO} 2098, 2052 cm^{-1} (hexane).

Scholten, J.P. *et al*, *J. Polym. Sci., Polym. Chem. Ed.*, 1972, **10**, 3067 (*synth, ir, use*)

$C_3Cl_3FeGeNO_4$ IC-003535

Tricarbonylnitrosyl(trichlorogermyl)iron, 8CI

[31275-37-3]

$Cl_3GeFe(CO)_3NO$

M 348.8

Yellow cryst. (pentane). Dec. at 71°.

Casey, M. *et al*, *J. Chem. Soc. A*, 1971, 256 (*synth, ir*)

$C_3Cl_3FeNO_4Sn$ IC-003536

Tricarbonylnitrosyl(trichlorostannyl)iron, 8CI

[27776-74-5]

$Cl_3SnFe(CO)_3NO$

M 394.9

Yellow cryst. (pentane). Mp 101° dec.

Casey, M. *et al*, *J. Chem. Soc. A*, 1971, 256 (*synth, ir*)

$C_3Cl_3GeNiO_3^{\ominus}$ IC-003537

Tricarbonyl(trichlorogermyl)nickelate(1 –), 9CI

Trichlorogermylnickelate(1 –) tricarbonyl

$[Ni(GeCl_3)(CO)_3]^{\ominus}$ (C_{3v})

M 321.6 (ion)

Et_4N salt: [53426-17-8].
Orange cryst. (CH_2Cl_2/pentane). Mp 85°. Mod. unstable, even under N_2.

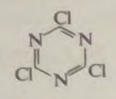
Kruck, T. *et al*, *Z. Naturforsch., B*, 1974, **29**, 198 (*synth*)

$C_3Cl_3N_3$ IC-003538

2,4,6-Trichloro-1,3,5-triazine, 9CI

Cyanuric chloride

[108-77-0]



M 184.4

Known since 1827. Interatomic distances: C—N 133, C—Cl 168 pm; angle: NCN 125°. Synth. from HCN + Cl_2. Commercially available. Used in prepn. of pesticides, herbicides, fungicides, dyestuffs, optical bleaching agents, finishing agents, plastics, explosives, rubber, resins. Reagent for synth. of alkyl halides and deoxygenation of phenols. Cryst. (C_6H_6). Insol. H_2O. Mp 154°. Bp_{720} 190°.

▷ Toxic vapour, irritant, allergen, lachrymator. Exp. carcinogen. Violent reaction with NaOH aq.,DMF, DMSO, MeOH. XZ1400000.

$C_3CoO_9^{3\ominus}$ IC-003550

Tris(carbonato(2−)-κ*O*,*O'*)cobaltate(*III*)(3−)

Tris(carbonato)cobaltate(III)

$[Co(CO_3)_3]^{3\ominus}$

M 238.9 (ion)

Octahedral complex with bidentate carbonate ligands.

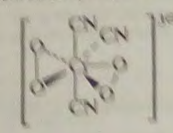
Tris-Na salt, trihydrate: Olive-green powder. Dec. at 93°.

Baxter, H.F., *J. Am. Chem. Soc.*, 1960, **82**, 5031 (*synth*)
Inorg. Synth., 1966, **8**, 202 (*synth*)

$C_3CrN_3O_4^{3\ominus}$ IC-003551

Tris(cyano-*O*peroxychromate(*IV*))(3−), 10Cl

Tris(cyanoperoxochromate(IV))(3−)



M 194.0 (ion)

Pentagonal bipyramidal struct.

Tris-K salt: [65521-60-0].
$C_3CrK_3N_3O_4$ M 311.3
Cryst.

Stomberg, R., *Ark. Kemi.*, 1965, **23**, 401 (*cryst struct*)
Baran, E.J., *Monatsh. Chem.*, 1977, **108**, 1295 (*ir*)

$C_3DyF_9O_9S_3$ IC-003552

Dysprosium(*III*) trifluoromethanesulfonate

Dysprosium triflate

$Dy(OSO_2CF_3)_3$

M 609.7

Forms adducts with various *O*-donor ligands. Affords DyF_3 on pyrolysis.

Nonahydrate: [67878-35-7].
Yellow cryst. Sol. H_2O, EtOH, MeCN. Contains $[Dy(OH_2)_8]^{3\oplus}$ ions.

[85920-56-5]

U.S. Pat., 3 615 169, (1971); *CA*, 1972, **76**, 5436 (*synth, use*)
Roberts, J.E. *et al*, *Thermochim. Acta*, 1978, **25**, 233 (*synth, tga*)

Sen, H., *J. Phys. C*, 1988, **21**, 4497 (*magnetism*)

$C_3DyN_3S_3$ IC-003553

Dysprosium(*III*) thiocyanate

$Dy(NCS)_3$

M 336.7

Normally not isol.; synth. metathetically and used as soln.

Hexahydrate: Hygroscopic yellow cryst. Sol. H_2O, EtOH. Presumed 8-coord. by analogy with Eu, Y compds.

Heptahydrate: [38928-02-8].
Yellow cryst. 9-Coord. 3 face capped trigonal prism, with one H_2O uncoord. Contains $Dy(NCS)_3(H_2O)_6$ molecules. Isostructural with Gd-Lu analogues.

$C_3ErF_9O_9S_3$ IC-003554

Erbium(*III*) trifluoromethanesulfonate

Erbium triflate

$Er(OSO_2CF_3)_3$

M 614.4

Forms adducts with various *O*- and *N*-donor ligands. Affords ErF_3 on pyrolysis.

Nonahydrate: [67878-37-9].
Pink cryst. Sol. H_2O, EtOH, MeCN. Prob. contains $[Er(OH_2)_8]^{3\oplus}$ ions.

(*U.S. Pat.*), 3 615 169, (1971); *CA*, 1972, **76**, 5436 (*synth, use*)

$C_3EuF_9O_9S_3$ IC-003556

Europium(*III*) trifluoromethanesulfonate

Europium triflate

[52093-25-1]

$Eu(OSO_2CF_3)_3$

M 599.1

On pyrolysis affords EuF_3. Used in template synth. Forms adducts with various *O* and *N*-donor ligands.

Nonahydrate: [67878-33-5].
Cryst. Sol. H_2O, EtOH, MeCN. Contains $[Eu(OH_2)_9]^{3\oplus}$ ions.

[34629-27-1, 85920-53-2]

U.S. Pat., 3 615 169, (1971); *CA*, 1972, **76**, 5436 (*synth, use*)
Massaux, J. *et al*, *Anal. Chim. Acta*, 1974, **73**, 416 (*synth, complex, electrochem*)

$C_3EuN_3S_3$ IC-003557

Europium(*III*) thiocyanate

$Eu(NCS)_3$

M 326.2

Synth. by metathesis and used in soln.

Hexahydrate: [102332-24-3].
Colourless cryst. Sol. H_2O. Contains $Eu(NCS)_3(OH_2)_3$ molecules with one H_2O uncoord. Isomorphous with Sm, Gd analogues.

Heptahydrate: Colourless cryst. Isomorphous with other rare earth heptahydrates. Contains $Eu(NCS)_3(OH_2)_4$ molecules.

Hart, F.A. *et al*, *J. Inorg. Nucl. Chem.*, 1964, **26**, 579 (*synth*)

Snow, S.S. *et al*, *Inorg. Chem.*, 1987, **26**, 1597 (*ir*)

$C_3F_3O_3Ru$ IC-003560

Tricarbonyltrifluororuthenium(*III*), 9Cl

[59559-91-0]

$(OC)_3RuF_3$

M 242.0

fac-Octahedral. Synth. by the reaction of Dodecacarbonyltriruthenium, IC-008378 with an excess of XeF_2 in 1,1,2-$C_2Cl_3F_3$ or anhydrous HF at r.t. Buff, air-sensitive solid. $\mu_{eff} = 1.92\mu_B$. Ir ν_{CO} 2148, 2072, ν_{Ru-F} 649, 596 cm^{-1}.

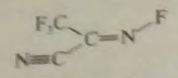
Hewitt, A.J. *et al*, *J. Chem. Soc., Dalton Trans.*, 1976, 579 (*synth, ir, esr*)

IC-003561

$C_3F_4N_2$

3,3,3-Trifluoro-2-(fluoroimino)propanenitrile, 12CI

[105882-87-9]



(Z)-form

M 140.0

Formed from N_2F_4 + $F_3CCH{=}CH_2$ at 160°. Colourless liq.

Marsden, H.M. *et al*, *Inorg. Chem.*, 1987, **26**, 169 (*synth, ir, F-19 nmr, ms*)

IC-003562

C_3F_6

Hexafluorocyclopropane, 9CI

Perfluorocyclopropane. Fluorocarbon C-216

[931-91-9]

M 150.0

Gas. Fp −80°. Bp −31.5°.

Haszeldine, R.N., *J. Chem. Soc.*, 1953, 3761 (*synth*)

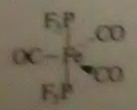
IC-003563

$C_5F_6FeO_3P_2$

Tricarbonylbis(phosphorous trifluoride)iron, 10CI

Tricarbonylbis(trifluorophosphine)iron

[55275-22-2]



trans-form

M 315.8

Exists as a mixt. of 3 rapidly equilibrating isomers. V. volatile yellow liq. Stable in hydrocarbon solvs., rapidly attacked by alcohols, Me_2CO, immisc. H_2O.

Clark, R.J. *et al*, *Inorg. Chem.*, 1964, **3**, 1395 (*synth, ir*)
Ogilvie, F. *et al*, *Inorg. Chem.*, 1969, **8**, 1904 (*nmr*)

Head, R.A. *et al*, *J. Organomet. Chem.*, 1978, **145**, 75 (*pe*)

IC-003564

$C_5F_6NiO_3Si_2$

Tricarbonylbis(trifluorosilyl)nickel, 10CI

[89377-46-8]

$Ni(CO)_3(SiF_3)_2$

M 312.8

Cryst. Sublimes.

Grosbeux, T.J. *et al*, *J. Organomet. Chem.*, 1983, **259**, 337 (*synth, ir, ms*)

IC-003565

$C_3F_6O_3P_2Ru$

Tricarbonylbis(phosphorous trifluoride)ruthenium, 9CI

Tricarbonylbis(trifluorophosphine)ruthenium(0)

[36429-99-9]

$Ru(CO)_3(PF_3)_2$

M 361.0

Identification only tentative, may be a mixture of isomers. A minor product of the reaction between $Ru_3(CO)_{12}$, CO and PF_3 at 150° and high pressure. Light-yellow liq., identified spectroscopically. Ir ν_{CO} 2082, 2071, 2041, 2026, 2008 cm^{-1} (hexane).

Udovich, C.A. *et al*, *J. Organomet. Chem.*, 1972, **36**, 355 (*synth, ir, nmr*)

IC-003566

$C_3F_9FeO_9S_3$

Iron(*III*) trifluoromethanesulfonate

Ferric trifluoromethanesulfonate. Ferric triflate

[63295-48-7]

$Fe[OS(O)_2CF_3]_3$

M 503.0

Obt. from $FeCl_3$ + CF_3SO_3H. Catalyst for epoxidn. of olefins with iodosylbenzene and oxidative polym. of pyrroles. Photolysis catalyst. White solid.

Haynes, J.S. *et al*, *Can. J. Chem.*, 1981, **59**, 669 (*synth, ir, mössbauer, magnetism*)

IC-003567

$C_3F_9GaO_9S_3$

Gallium(*III*) trifluoromethanesulfonate

Tris(trifluoromethanesulfonato)gallium

[74974-60-0]

$Ga(OSO_2CF_3)_3$

M 516.9

Oligomeric in most solvs. Synth. from GaX_3 (X = Br or Cl) and CF_3SO_3H. Friedel-Crafts catalyst. High melting white solid. Spar. sol. non polar solvs. Sol. diglyme, MeCN, Me_2CO, CH_2Cl_2.

Olah, G.A., *J. Am. Chem. Soc.*, 1988, **110**, 2560.
U.S. Pat., 4 721 559, (1988); *CA*, **109**, 57031 (*use*)

IC-003568

$C_3F_9GdO_9S_3$

Gadolinium(*III*) trifluoromethanesulfonate

Gadolinium triflate

[52093-29-5]

$Gd(OSO_2CF_3)_3$

M 604.4

Affords GdF_3 on pyrolysis.

Nonahydrate: [85920-54-3].
$C_3H_{18}F_9GdO_{18}S_3$ M 766.5
Colourless cryst. Sol. H_2O, EtOH, MeCN. Contains $Gd(OH_2)_9^{3\oplus}$ ions which are tricapped trigonal prismatic. Affords GdF_3 on pyrolysis.

[34629-24-8, 85920-54-3]

Roberts, J.E. *et al*, *Thermochim. Acta*, 1978, **25**, 233 (*synth, tga*)

$C_3F_9LuO_9S_3$

Lutetium(*III*) trifluoromethanesulfonate IC-003571

Lutetium triflate

$Lu(OSO_2CF_3)_3$

M 622.1

Affords LuF_3 on pyrolysis.

Nonahydrate: [85920-59-8].
$C_3H_{18}F_9LuO_{18}S_3$ M 784.3
Colourless cryst. Sol. H_2O, EtOH, MeCN. Contains $Lu(OH_2)_9^{3\oplus}$ ions which are tricapped trigonal prismatic.

U.S. Pat., 3 615 169, (1971); *CA*, 1972, **76**, 5436 (*synth, use*)
Harrowfield, J.Mc.B. *et al*, *Aust. J. Chem.*, 1983, **36**, 483 (*synth, cryst struct*)

$C_3F_9NS_3$

Tris(trifluoromethylsulfenyl)amine IC-003572

Nonafluorotrimethylsulfenamide. 1,1,1-Trifluoro-N-N-bis[(trifluoromethyl)thio]methanesulfenamide, 9CI

[4317-00-4]

$(F_3CS)_3N$

M 317.2

Formed from CF_3SNH_2 + CF_3SCl + Me_3N at −60°. Colourless liq. Bp 99.6°.

Haas, A. *et al*, *Chem. Ber.*, 1968, **101**, 3407 (*synth, ir, F-19 nmr, props*)
Haas, A. *et al*, *Z. Anorg. Allg. Chem.*, 1974, **406**, 185 (*reactions*)

$C_3F_9NdO_9S_3$

Neodymium(*III*) trifluoromethanesulfonate IC-003573

Neodymium triflate

[34622-08-7]

$Nd(OSO_2CF_3)_3$

M 591.4

Forms complexes with various *O*- and *N*-donor ligands. On pyrolysis affords NdF_3 and COF_2.

Nonahydrate: [34629-20-4].
Lilac cryst. Sol. H_2O, EtOH, MeCN. Contains tricapped trigonal prismatic $[Nd(OH_2)_9]^{3\oplus}$ ions.

[85920-51-0]

U.S. Pat., 3 615 169, (1971); *CA*, 1972, **76**, 5436.

Sen, H., *J. Phys. C*, 1988, **21**, 4497 (*magnetism*)

IC-003575

$C_3F_9O_9S_2Sm$
Samarium(*III*) trifluoromethanesulfonate
Samarium(III) *triflate*
[52093-28-4]

$Sm(OSO_2CF_3)_3$

M 597.5
Pyrolysis affords SmF_3.
Nonahydrate: [67878-32-4]. *Nonaaquasamarium(3+) trifluoromethanesulfonate*
$C_3H_{18}F_9O_{18}S_3Sm$ M 759.7
Yellow cryst. Contains $[Sm(OH_2)_8]^{3\oplus}$ ions.

[34629-23-7, 85920-52-1]
U.S. Pat., 3615169, (1971); *CA*, 1972, **76**, 5436 (*synth, use*)
Massaux, J. *et al, Anal. Chim. Acta*, 1974, **73**, 416 (*electrochem*)

Vincentini, G. *et al, J. Less-Common Met.*, 1983, **94**, 285 (*synth, adducts*)
Chatterjee, A. *et al, Acta Crystallogr., Sect. B*, 1988, **44**, 381 (*cryst struct*)

IC-003576

$C_3F_9O_9S_3Tb$
Terbium(*III*) trifluoromethanesulfonate
Terbium(III) *triflate*

$Tb(OSO_2CF_3)_3$

M 606.1
Forms adducts with various *O*- donor ligands.
Nonahydrate: [67913-11-5].
Pale pink cryst. Sol. H_2O, EtOH, MeCN. Contains $[Tb(OH_2)_8]^{3\oplus}$ ions.

[85920-55-4]
U.S. Pat., 3615169, (1971); *CA*, 1972, **76**, 5436 (*synth, use*)
Roberts, J.E. *et al, Thermochim. Acta*, 1978, **25**, 233 (*synth, tga*)
Vincentini, G. *et al, J. Less-Common Met.*, 1983, **94**, 285 (*synth, adducts*)

Chatterjee, A. *et al, Acta Crystallogr., Sect. B*, 1988, **44**, 381 (*cryst struct*)
Sen, H., *J. Phys. C*, 1988, **21**, 4497 (*magnetism*)

IC-003577

$C_3F_9O_9S_3Tm$
Thulium(*III*) trifluoromethanesulfonate
Thulium triflate

$Tm(OSO_2CF_3)_3$

M 616.1
Forms adducts with various *O*-donor ligands. Affords TmF_3 on pyrol.
Nonahydrate: [74660-76-7].
Green cryst. Sol. H_2O, EtOH, MeCN. Prob. contains $[Tm(OH_2)_8]^{3\oplus}$ ions.

U.S. Pat., 3 615 169, (1971); *CA*, 1972, **76**, 5436 (*synth, use*)
Seminova, A. *et al, Inorg. Chim. Acta*, 1980, **40**, 249 (*synth, ir, complexes*)
Vincentini, G. *et al, J. Less-Common Met.*, 1983, **94**, 285 (*synth, complexes*)

$C_3F_9O_9S_3V$ IC-003578
Vanadium(*III*) trifluoromethanesulfonate
Trifluoromethanesulfonic acid, vanadium(III) *salt, 11Cl*
[96332-29-5]

$V(OSO_2CF_3)_3$

M 498.1
Synth. from $V(O_2CCF_3)_3$ and CF_3SO_3H in CF_3COOH.
Green solid. Paramagnetic, $\mu_{eff} = 2.7\mu_B$ (302K).

Sing, S. *et al, J. Fluorine Chem.*, 1985, **27**, 133 (*synth, ir, magnetism, props*)

$C_3F_9O_9S_3Y$ IC-003579
Yttrium(*III*) trifluoromethanesulfonate
Yttrium triflate
[52093-30-8]

$Y(OSO_2CF_3)_3$

M 536.1
Affords YF_3 on pyrolysis.
Nonahydrate: [85920-60-1].
$C_3H_{18}F_9O_{18}S_3Y$ M 698.2
Used in template + other synth. Colourless cryst. Sol. H_2O, EtOH, MeCN. Contains $Y(OH_2)_9^{3\oplus}$ ions which are tricapped trigonal prismatic.

[34629-26-0]
Roberts, J.E. *et al, Thermochim. Acta*, 1978, **25**, 233 (*struct, tga*)
Harrowfield, J.Mc.B. *et al, Aust. J. Chem.*, 1983, **36**, 483 (*synth, cryst struct*)

IC-003580

$C_3F_9O_9S_3Yb$
Ytterbium(*III*) trifluoromethanesulfonate
Ytterbium triflate
[54761-04-5]

$Yb(OSO_2CF_3)_3$

M 620.2
Used in template synth. Forms complexes with various *O*-donor ligands. Affords YbF_3 on pyrolysis.
Nonahydrate: [67878-38-0].
Colourless cryst. Sol. H_2O, EtOH, MeCN. Prob. contains $[Yb(OH_2)_9]^{3\oplus}$ ions.

[85920-58-7]
U.S. Pat., 3 615 169, (1971); *CA*, 1972, **76**, 5436 (*synth, use*)
Massaux, J. *et al, Anal. Chim. Acta*, 1974, **73**, 416 (*synth, complex, electrochem*)
Roberts, J.E. *et al, Thermochim. Acta*, 1978, **25**, 233 (*synth, tga*)

Smith, P.H. *et al, Inorg. Chem.*, 1988, **27**, 4154 (*use*)

IC-003581

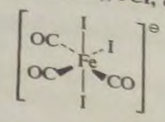
$C_3F_9O_{10}S_3V$
Oxotris(trifluoromethanesulfonato-*O*)vanadium(*V*), 11Cl
[81439-30-7]

$VO(OSO_2CF_3)_3$

M 514.1

Tetrahedral. Synth. from $VOCl_3$ and CF_3SO_3H. Dark green solid. Ir $\nu_{V=O}$ 1005 cm^{-1}.
Sing, S. *et al, J. Fluorine Chem.*, 1985, **27**, 133 (*synth, ir, props*)

$C_3FeI_3O_3^{\ominus}$
Tricarbonyltriiodoferrate(1−), 9CI, 8CI IC-003582



M 520.5 (ion)
fac-Octahedral anion.
K salt: [62048-72-0].
Brown-red. Sol. THF.
Et_4N salt: [20528-31-8].
Synth. from $Fe(CO)_4I_2$ + $[Et_4N]I$. Deep-crimson cryst. Sol. $PhNO_2$. Mp 100° dec.
[62048-71-9]
Chalmers, A.A. *et al, J. Chem. Soc. A*, 1968, 1013 (*synth, ir*)
Pankowski, M. *et al, J. Organomet. Chem.*, 1977, **125**, 231 (*synth, ir*)

$C_3FeNO_4^{\ominus}$
Tricarbonylnitrosylferrate(1−), 9CI, 8CI IC-003583
[15020-24-3]

$[(OC)_3FeNO]^{\ominus}$

M 169.8 (ion)
Starting material for $Fe(CO)_x(NO)$ complexes.
Na salt: [25875-18-7].
$C_3FeNNaO_4$ M 192.8
Air-sensitive yellow cryst. Hygroscopic. Forms yellow needles of addn. compd. (1:1) with 1,4-dioxan.
K salt: [25875-19-8].
C_3FeKNO_4 M 208.9
Bright yellow-orange cryst. (Et_2O/xylene). Sol. THF, Et_2O.
Tl(1+) salt:
C_3FeNO_4Tl M 374.2
Yellow. Sol. CH_2Cl_2. Predominantly ionic.
Me_4N salt: Yellow needles (Me_2CO aq.).

$C_3FeN_2O_3^{2\ominus}$
Dicarbonyl(cyano-*C*)nitrosylferrate(2−), 9CI IC-003584

$[(OC)_2Fe(CN)(NO)]^{2\ominus}$

M 167.8 (ion)
Di-K salt: [59060-85-4].
$C_3FeK_2N_2O_3$ M 246.0
Orange.
Bis-Ph_4P salt: [59390-34-0].
Brown cryst.
Nast, R. *et al, Z. Anorg. Allg. Chem.*, 1976, **421**, 15 (*synth, ir*)

$C_3FeN_3O_3^{3\ominus}$
Carbonylbis(cyano-*C*)nitrosylferrate(3−), 9CI IC-003585
$[Fe(CN)_2(CO)(NO)]^{3\ominus}$
M 165.8 (ion)
Struct. not determined.
Tri-K salt: [59060-86-5].
Orange.
Nast, R. *et al, Z. Anorg. Allg. Chem.*, 1976, **421**, 15 (*synth, ir*)

$C_3FeN_3S_3$
Iron(*III*) thiocyanate
Ferric thiocyanate
[4119-52-2] IC-003586

$Fe(SCN)_3$

M 230.0
Only exists under anhydrous conditions. Synth. from: (i) thiocyanogen + iron metal; (ii) slow evap. of soln. of $Ba(NCS)_2$ + $Fe_2(SO_4)_3$; (iii) $Fe(OH)_3$ + HSCN. Difficult to obtain pure. Used to stain samples for electron microscopy; in analytical chem. Dark violet cryst. Sol. H_2O. Forms trihydrate in aq. soln.
Trihydrate: Obt. by crystallisation of $Fe(SCN)_3$ from H_2O. Red cryst. (H_2O).
Schlesinger, H.I. *et al, J. Am. Chem. Soc.*, 1931, **53**, 1212 (*synth*)
Mitchell, K.M. *et al, J. Chem. Soc.*, 1951, 1310 (*synth*)
Sano, H. *et al, Chem. Lett.*, 1973, 43 (*mössbauer, synth*)

$C_3GaN_3S_3$
Gallium(*III*) thiocyanate IC-003587

$Ga(NCS)_3$

M 243.9
Anhydrous compd. not known. Many complexes $Ga(NCS)_3L_3$ with unidentate *N*-donors descr.
Trihydrate: [21991-94-6]. *Triaquatris(isothiocyanato) gallium*(III)
$C_3H_4GaN_3O_6S_3$ M 346.0
Synth. from aq. $Ga_2(SO_4)_3$ + $Ba(NCS)_2$. Pale yellow deliquescent solid. Sol. alcohols, Me_2CO, MeCN, Et_2O. Spar. sol. CH_2Cl_2, cyclohexane, $CHCl_3$. Dec. > 100°. Slow hydrol. in aq. soln.
Patel, S.J. *et al, Can. J. Chem.*, 1969, **47**, 229 (*synth, ir, complexes*)

$C_3GdN_3S_3$
Gadolinium(*III*) thiocyanate IC-003588

$Gd(NCS)_3$

M 331.5
Not usually isol.; prepd. by metathesis and used in soln.
Hexahydrate: [103623-56-9].
Hygroscopic colourless cryst. Contains $Gd(NCS)_3(OH_2)_3$ molecules. 8-coord., with one uncoord. H_2O. Isomorphous with Eu, Sm analogues.
Heptahydrate: Colourless cryst. 9-Coord. with $Gd(NCS)_3(H_2O)_6$ molecules. Isomorphous with some other rare earth heptahydrates.

IC-003595

Tris(formato-*O*)cuprate(1–), 9CI

Copper(II) formate(1–)

[50928-43-3]

$[Cu(OOCH)_3]^{\ominus}$

M 198.5 (ion)

Octahedral at Cu with extensive formate bridging.

Me_2NH_2 salt: Turquoise cryst.

Sletten, E. *et al. Acta Crystallogr., Sect. B*, 1973, **29**, 1752 (*cryst struct*)

$C_3H_3ErO_6$

Erbium(*III*) formate **IC-003596**

Erbium triformate

[15331-72-3]

$Er(OOCH)_3$

M 302.3

Pink solid. Formed by heating hydrate at 90°.

Dihydrate: [76358-29-7].

Piezoelectric. Square antiprismatic at Er, polymeric struct. Loses H_2O on heating to 90°.

Bis-DMF complex: Cryst. Distorted square antiprismatic. Each Er bound to 2 DMF, 6 bridging formates. Dy analogue also prepd.

M 174.0
Colourless, fuming liq. Bp_{18} 39°. Dec. during long storage.

Dunmur, R.E. *et al, J. Chem. Soc. A*, 1971, 1289 (*synth, ir, pmr, F-19, P-31 nmr*)
Baldwin, M.A. *et al, Org. Mass Spectrom.*, 1977, **12**, 275 (*ms*)

$C_3H_6HgO_2S$ IC-003627

(Acetato-*O,O'*)(methanethiolato)mercury, 10Cl

(Acetyloxy)(methylmercapto)mercury

[65367-05-7]

MeSHgOAc

M 306.7
Polymeric in solid state with both S and O bridging. Given acidic soln. in H_2O due to partial hydrolysis; sulfur bridging is maintained in aq. soln. Cryst. (H_2O). Sol. H_2O. Mp 133-136°.
Py complex: [66099-21-6]. (Acetato-*O,O'*)(methanethiolato)pyridinemercury, 10Cl
$C_8H_{11}HgNO_2S$ M 385.8
Colourless cryst. Sol. H_2O. Contains infinite chains in solid state. Loses Py at r.t.

Canty, A.J. *et al, Inorg. Chim. Acta*, 1977, **24**, L77 (*synth, spectr, deriv*)
Canty, A.J. *et al, Aust. J. Chem.*, 1978, **31**, 671, 677 (*synth, spectr, deriv, ir, cryst struct*)

$C_3H_6HgO_2Se$ IC-003628

(Acetato)(methaneseleenato)mercury(*II*)

[79790-65-1]

MeSeHgOAc

M 353.6

Prepd. from $Hg(SeMe)_2$ and $Hg(OAc)_2$. Colourless cryst.

Arnold, A.P. *et al, Inorg. Chim. Acta*, 1981, **55**, 171 (*synth, ir, cryst struct*)

IC-003629

$C_3H_6MgO_4$

Methoxy(methyl carbonato-*O*)magnesium, 9CI

Methyl methoxymagnesium carbonate. (Hydrogen carbonato)methoxymagnesium methyl ester, 8CI. Magnesium methyl carbonate

[4861-79-4]

MeOCOOMgOMe

M 130.3

Prepd. by dissoln. of CO_2 in MeOH containing $Mg(OMe)_2$. Commercially available in soln. in DMF (2*M*) or MeOH (0.5*M*). Mild carboxylating agent for nitro and carbonyl compds. Moisture-sensitive; prepd. and used in soln.

▷ Highly toxic, irritant.

Finkbeiner, H.L. *et al, J. Am. Chem. Soc.*, 1963, **85**, 616 (*synth, uses*)
Whitlock, B.J. *et al, J. Org. Chem.*, 1974, **39**, 3144 (*uses*)

[2746-72-7]

$Ga(OMe)_3$

M 162.8
Synth. from $Ga(OPr^i)_3$ + MeOH. White moisture-sensitive solid. Spar. sol. C_6H_6. $Subl._{0.4}$ 275-280°. Several other alkoxides also reported.

Bindal, S.R. *et al*, *J. Chem. Soc. A*, 1969, 863 (*synth, props, ir*)

IC-003683

$C_3H_9I_5PPt^{\ominus}$

Pentaiodo(trimethylphosphine)platinate(*IV*)(1−), 9Cl

$[PtI_5(PMe_3)]^{\ominus}$

M 905.6 (ion)
Tetrapropylammonium salt: [52309-25-8].
Black cryst. Sol. CH_2Cl_2, Me_2CO. Mp 145-150°.

Goggin, P.L. *et al*, *J. Chem. Soc., Dalton Trans.*, 1974, 523 (*synth, ir, pmr*)

IC-003684

$C_3H_9LaO_3$

Lanthanum(*III*) methoxide
Trimethoxylanthanum(III)

$La(OMe)_3$

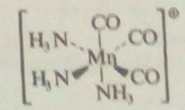
M 232.0
White powder. Sl. sol. MeOH. Presumably oligomeric.

Bradley, D.C. *et al*, *Chem. Ind.* (*London*), 1958, 1332.

IC-003685

$C_3H_9MnN_3O_3^{\oplus}$

Triamminetricarbonylmanganese(1+)
[14872-96-9]



M 190.0 (ion)

fac-form

Pentacarbonylmanganate(1−):
$C_8H_9Mn_3N_3O_8$ M 385.0
Synth. from $Mn_2(CO)_{10}$ and liq. NH_3. Air-stable yellow cryst. Sol. Me_2CO, H_2O.
Tetraphenylborate: [14872-95-8].
Yellow cryst. (Me_2CO aq.). Sol. Me_2CO, insol. H_2O.

Behrens, H. *et al*, *Z. Anorg. Allg. Chem.*, 1967, **349**, 241 (*synth*)
Behrens, H. *et al*, *J. Organomet. Chem.*, 1972, **34**, 367 (*synth*)

IC-003686

$C_3H_9MnN_3O_6P$

Trinitrosyl(trimethyl phosphite-*P*)manganese, 9CI

[52352-74-6]

$Mn(NO)_3P(OMe)_3$

M 269.0

Synth. from $Mn(NO)_3(THF)$ and $P(OMe)_3$. Dark green cryst. Ir ν_{NO} 1788, 1690 cm^{-1} (THF).

Herberhold, M. *et al*, *J. Organomet. Chem.*, 1974, **67**, 81 (*synth, ir*)

IC-003687

$C_3H_9MoOS_3Si^{\ominus}$

Trimethylsiloxytrisulfidomolybdate(*VI*)(1−)

Trithioxo(trimethylsilanolato)molybdate(VI)(*1−*)

$[MoS_3(OSiMe_3)]^{\ominus}$

M 281.3 (ion)

Approx. tetrahedral at Mo.

Ph_4P salt: [96211-55-1].

Synth. by reaction of $[Mo_3O_7]^{2\ominus}$ with 7 equiv. of $(Me_3Si)_2S$ in MeCN. Red cryst. (Me_2CO/Et_2O at −20°). Sol. MeCN.

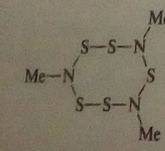
Do, Y. *et al*, *Inorg. Chem.*, 1985, **24**, 1831 (*cryst struct, synth, ir, uv-vis*)

IC-003688

$C_3H_9N_3S_5$

3,6,8-Trimethyl-1,2,4,5,7,3,6,8-pentathiatriazocine

[28924-10-9]



M 247.4

Isol. from reaction of $MeNH_2$ with SCl_2. White cryst; stable to NaOH aq. Sol. hexane. Bp 54-55°. Dec. at 190°.

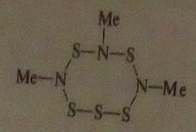
Stone, B.D. *et al*, *J. Am. Chem. Soc.*, 1959, **81**, 3580 (*synth, ir, raman, pmr*)

IC-003689

$C_3H_9N_3S_5$

4,6,8-Trimethyl-1,2,3,5,7,4,6,8-pentathiatriazocine

[28924-11-0]



M 247.4

White needles; stable to NaOH aq. Bp 44-46.5°.

Stone, B.D. *et al*, *J. Am. Chem. Soc.*, 1959, **81**, 3580 (*synth, ir, raman, pmr*)

IC-003690

$C_3H_9N_6NbO_3$

Diazidotrimethoxyniobium(*V*), 11CI

[97069-05-1]

$Nb(N_3)_2(OMe)_3$

M 270.0

Synth. from $Nb(OMe)_3Cl_2$ and KN_3. Moisture-sensitive solid. Insol. common org. solvs. Ir ν_{N_3} 2100 cm^{-1}. Dec. at 180°/0.4 mm.

▷ Potentially explosive.

Geetha, C.N. *et al*, *Indian J. Chem., Sect. A*, 1985, **24**, 236 (*synth, ir*)

IC-003691

$C_3H_9N_6NiS_3^{\ominus}$

Triamminetris(thiocyanato-*N*)nickelate(*II*)(1−)

$[Ni(NCS)_3(NH_3)_3]^{\ominus}$

M 284.0 (ion)

mer-Octahedral anion.

NH_4 salt: Deliquescent blue-violet trigonal cryst. μ_{eff} = 3.26μ_B.

Porai-Koshits, M.A. *et al*, *Acta Crystallogr.*, 1957, **10**, 784 (*cryst struct*)

Yukhno, E.R., *Zh. Neorg. Khim.*, 1960, **7**, 807; *Russ. J. Inorg. Chem. (Engl. Transl.)*, 1962, **7**, 417 (*synth, magnetism*)

IC-003692

$C_3H_9N_6O_6Zn^{\ominus}$

Tris(carbazato)zincate(1−)

Tris(hydrazinecarboxylato-N^2,*O′)zincate(1−)*

$[(H_2NNHCO_2)_3Zn]^{\ominus}$

M 290.5 (ion)

6-Coordinate zinc; struct. not detd.

K salt: [14874-65-8].

Hydrazinium salt: [12076-76-5].

Forms a monohydrate.

[19697-27-9]

Braibanti, A. *et al*, *Ric. Sci.*, 1966, **36**, 1153, 1156 (*synth, ir*)

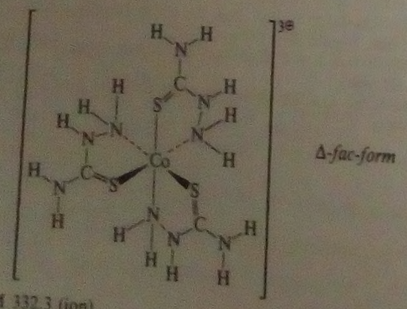
Tris(thiosemicarbazide)cobalt(*III*)(3+)

Tris(hydrazinecarbothioamide-N^2,S)cobalt(3+), 11Cl, 10Cl, 9Cl



Δ-fac-form

M 332.3 (ion)

Exists in *fac* and *mer* isomers. Sol. H_2O; v. insol. common org. solvs. Diamagnetic.

▲(±)-*fac-form*
All optically active *cis* isomers eventually racemise.
Violet isomer.

Trichloride: [29855-60-5].
Violet or red cryst. (H_2O).

Trichloride, monohydrate: Pink-lilac needles.

Trichloride, trihydrate: [76771-28-3].
Dark violet cryst. (conc. HCl). Sol. H_2O; spar. sol. org. solvs.

Triiodide, trihydrate: Dark violet, almost black prisms. Sol. H_2O; less readily sol. EtOH and other org. solvs.

Triperchlorate: Violet cryst. Sol. H_2O, MeOH, EtOH; less sol. Et_2O.

Trinitrate, trihydrate: [14263-57-1].
Pale violet plates.

Δ-fac-form
$(-)_D$, cis-*form*

$(+)_D$-*Antimonyl tartrate:* Cryst. + $4H_2O$. $[\alpha]_{589}$ −1290°.

Λ-fac-form
(+)-cis-*form*
Attempts to remove resolving agent were unsuccessful.

$(-)_D$- *Antimonyl tartrate:* Cryst. + $4H_2O$. Sol. H_2O. $[\alpha]_{589}$ +1225°.

(±)-*mer-form*
(±)-*form*
Green isomer.

Trichloride, tetrahydrate: [79854-60-7].
Green cryst. Sol. H_2O; spar. sol. EtOH, Et_2O, Me_2CO.

Tribromide, tetrahydrate: Brown-green prisms. Readily sol. H_2O; spar. sol. EtOH, Me_2CO; almost insol. Et_2O.

Δ-mer-form
(−)-trans-*form*
Converts to Λ-*fac* form in soln. in 15 days, then racemises.

$(+)_D$-*Antimonyl tartrate:* Cryst. + $3H_2O$. $[\alpha]_{589}$ +375°.

Λ-mer-form
(+)-trans-*form*
Converts to Δ-*fac* form and then racemises slowly.

$(-)_D$-*Antimonyl tartrate:* Cryst. + $3H_2O$. $[\alpha]_D$ −375°.

$C_3HgN_3S_3^{\ominus}$ IC-003761
Tris(thiocyanato-*S*)mercurate(1 −)
Trithiocyanatomercurate(1 −)
[21667-89-0]
$[Hg(SCN)_3]^{\ominus}$

M 374.8 (ion)
K salt: [52139-52-3].
Rb salt: [52139-53-4].
Cs salt: [52139-54-5].
Cryst. Struct. comprises dimeric units $[Hg_2(SCN)_6]$: 2 edge-linked tetrahedra; $Cs^{\oplus}$ occupies spaces between anions.
NH_4 salt: [52139-51-2].
Ph_4P salt: [53516-71-5].
Cryst. Infinite chains of $[Hg(SCN)_3]^{\ominus}$ are bridged by SCN: tetrahedral Hg.
[Bis(ethylenedithiolato)tetrathiafulvalene]$_3$(1+) salt: [123341-63-9]. *Tris[2-(5,6-dihydro-1,3-dithiolo[4,5-b][1,4]dithiin-2-ylidene)-5,6-dihydro-1,3-dithiolo[4,5-b]dithiin] (1+) salt*
Cryst. Metal/insulator transition occurs at *ca.* 180K.

Larbot, A. *et al*, *Rev. Chim. Miner.*, 1973, **10**, 465 (*synth, ir, NH_4, Cs, K and Rb salts*)

IC-003762

$C_3HoN_3S_3$
Holmium(*III*) thiocyanate
$Ho(NCS)_3$

M 339.1
Synth. by metathesis and used as soln.
Hexahydrate: Hygroscopic yellow cryst. Sol. EtOH, H_2O. Probably contains $Ho(NCS)_3(OH_2)_5$ molecules.

Vincentini, G. *et al*, *Ann. Acad. Bras. Cienc.*, 1964, **36**, 123 (*synth*)
Hart, F.A. *et al*, *J. Inorg. Nucl. Chem.*, 1964, **26**, 579 (*synth*)
Kawamura, K. *et al*, *Trans. Natl. Res. Inst. Met. (Jpn.)*, 1965, **7**, 110 (*ir*)

IC-003763

C_3IIrO_3
Tricarbonyliodoiridium
$IrI(CO)_3$

M 403.1
Possibly polymeric. Useful starting material for iridium iodo-carbonyl complexes. Brown solid. Ir ν_{CO} 2073, 2046 cm^{-1} (nonanoic acid). One-dimensional conductor.

Hieber, W. *et al*, *Z. Anorg. Allg. Chem.*, 1941, **246**, 138 (*synth*)
Forster, D., *J. Chem. Soc., Dalton Trans.*, 1979, 1639 (*synth, ir*)

$C_3INiO_3^{\ominus}$ IC-003764
Tricarbonyliodonickelate(1 −), 9CI, 8CI
Iodotricarbonylnickelate(1 −)
[36830-71-4]
$[Ni(CO)_3I]^{\ominus}$ (C_{3v})

M 269.6 (ion)
Catalyst for carbonylation of benzyl chloride and carbonylation with acetylene insertion of acyl halides. Anion stable in air-free soln. even at 70-80°.
Na salt: [27122-29-8].
$C_3INaNiO_3$ M 292.6
Not stable in the pure state.
Tetrabutylammonium salt: [27122-27-6].
Not stable in pure state.

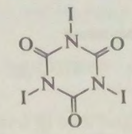
Cassar, L. *et al*, *Inorg. Nucl. Chem. Lett.*, 1970, **6**, 291 (*synth, ir*)
Foa, M. *et al*, *Gazz. Chim. Ital.*, 1972, **102**, 85 (*synth, use*)

C_3IO_3Rh IC-003765
Tricarbonyliodorhodium, 9CI
Iodotris(carbonyl)rhodium
[40784-47-2]
$Rh(CO)_3I$

M 313.8
Unstable in the absence of a high CO pressure. Ir ν_{CO} 2084, 2054 cm^{-1} (hexane).

Morris, D.E. *et al*, *J. Organomet. Chem.*, 1973, **49**, C53 (*synth, ir*)

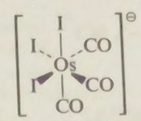
$C_3I_3N_3O_3$ IC-003766
1,3,5-Triiodo-1,3,5-triazine-2,4,6-trione
Triiodoisocyanuric acid
[59104-32-4]



M 506.7
Formed by polym. of Iodine isocyanate, IC-002718. Orange-red powder, more stable than Cl and Br analogues. Rapidly hydrol. by H_2O. Sl. sol. Me_2CO, MeCN.

Gottardi, W., *Monatsh. Chem.*, 1970, **101**, 655 (*synth*)
Gmelin Handbook Inorg. Chem., Syst. No. 14, 1976, **D3**, 147 (*bibl*)

$C_3I_3O_3Os^{\ominus}$ IC-003767
Tricarbonyltriiodoosmate(1 −), 9CI



fac-form

M 654.9 (ion)
fac-form
Tetrabutylammonium salt: [55399-59-2].
Bright-yellow cryst. (EtOH).
mer-form
Tetrabutylammonium salt: [58776-25-3].
Yellow.

Cleare, M.J. *et al*, *J. Chem. Soc. A*, 1969, 372 (*synth, ir, raman*)
Preetz, W. *et al*, *J. Organomet. Chem.*, 1975, **86**, 397; 1976, **104**, 79 (*synth, ir, raman*)

$C_3I_3O_3Ru^{\ominus}$ IC-003768
Tricarbonyltriiodoruthenate(1 −), 8CI
[32423-83-9]
As Tribromotricarbonylruthenate(1 −), IC-003524 with
X = I

M 565.8 (ion)
Cs salt: [22594-83-8].
$C_3CsI_3O_3Ru$ M 698.7
Yellow cryst.
Et_4N salt: [83721-25-9].
Yellow cryst. (MeOH).

Cleare, M.J. *et al*, *J. Chem. Soc. A*, 1969, 372 (*synth, ir, raman*)
Colton, R. *et al*, *Aust. J. Chem.*, 1971, **24**, 903 (*synth, ir*)

Hidai, M. *et al*, *Organometallics*, 1983, **2**, 292 (*synth*)

C_3InN_3 IC-003769
Indium(*III*) cyanide
Indium tricyanide
$In(CN)_3$

M 192.8
Synth. from $(CN)_2$ and InOI at 300°. White deliquescent cryst. V. sol. H_2O. Sol. EtOH, Me_2CO, Et_2O. Insol. C_6H_6, CCl_4. Subl. 340-350°. Slow hydrol. in aq. soln.

Goggin, P.L. *et al*, *J. Chem. Soc. A*, 1966, 1314 (*synth, powder struct*)

$C_3InN_3S_3$ IC-003770
Indium(*III*) thiocyanate
[60131-22-8]
$In(SCN)_3$

M 289.0
Synth. from NaSCN and $InCl_3$ in EtOH. White deliquescent cryst. (MeOH). Spar. sol. xylene, C_6H_6, CCl_4. Sol. EtOH, Me_2CO, Et_2O. Dec. >150°. Slow hydrol. in aq. soln. Many complexes $In(SCN)_3L_3$ formed with unidentate N- or O-donor L.

Goggin, P.L. *et al*, *J. Chem. Soc. A*, 1966, 1314 (*synth, powder struct*)
Patel, S.J. *et al*, *J. Chem. Soc. A*, 1967, 1187 (*synth, ir, complexes*)

$C_3LaN_3S_3$ IC-003771
Lanthanum(*III*) thiocyanate
$La(NCS)_3$

M 313.1
Usually not isol.; synth. by metathesis and used in soln.
Heptahydrate: [102563-34-8].
Hygroscopic colourless cryst. Sol. H_2O, EtOH. Contains $La(NCS)_3(OH_2)_6$ molecules, one H_2O molecule uncoord. 9-Coord., capped square antiprism. Cd-Nd analogues known.
Tetrakis-HMPA complex: [53781-31-0].
$C_{27}H_{72}LaN_{15}O_4P_4S_3$ M 1029.9
Colourless cryst. + ½ toluene. Sol. toluene, C_6H_6. Mp 183-185°. Contains N-bonded thiocyanate.

Cleve, P.T., *Bull. Soc. Chim. Fr.*, 1874, **21**, 190 (*synth*)
O'Neill, L. *et al*, *Trans. Faraday Soc.*, 1934, **30**, 1134 (*synth*)

$C_3La_2O_9$ IC-003772
Lanthanum carbonate ($La_2(CO_3)_3$)
[587-26-8]
$La_2(CO_3)_3$

M 457.8
Colourless cryst. Stable to 400-440°; ultimately dec. to La_2O_3 on heating.
Octahydrate: [6487-39-4].
When also containing Ce, forms mineral Lanthanite, $(La,Ce)_2(CO_3)_3.8H_2O$. Colourless cryst. Possesses irregular layer struct. with two diff. 10-coord. sites- La(1) bound to $4H_2O$, two monodentate CO_3, two bidentate CO_3; La(2) bound to $2H_2O$, four bidentate CO_3.

IC-003774

$C_3MnNO_4^{3\ominus}$

Tricarbonylnitrosylmanganate(2 –), 11Cl

[84928-58-5]

$[(OC)_3MnNO]^{2\ominus}$

M 168.9 (ion)
Di-Na salt, bis-crypt[2.2.2] complex: [84928-59-6].
Synth. by treatment of $Mn(NO)(CO)_3(PPh_3)$ with Na/Hg in THF at r.t. followed by addition of cryptand (2.2.2). Light-yellow cryst. Ir ν_{CO} 1840s, 1720vs; ν_{NO} 1480m cm^{-1}.
Di-K salt: [84928-56-3].
Yellow microcryst. Ir ν_{CO} 1900m, 1755vs; ν_{NO} 1420s cm^{-1} (THF).
[84928-57-4]

Chen, Y.-S. *et al, J. Am. Chem. Soc.*, 1983, **105**, 1689 (*synth, ir*)

IC-003775

C_2N_2O

Carbonyl cyanide

Oxopropanedinitrile, 9Cl. Mesoxalic dinitrile. Mesoxalonitrile

[1115-12-4]

NCCOCN

M 80.0
Formed from tetracyanoethylene oxide + dibutyl sulfide. Cyanoformylating reagent, also capable of Diels-Alder reactions. Colourless liq. d_4^{20} 1.124. Fp –36° to –35°, Mp –37.9°. Bp_{748} 65.5°, Bp 67°. Burns with bright-violet flame. Has overpowering odour reminiscent of HCN.

▷ Reacts explosively with H_2O, vigorously with alcohols.

IC-003788

$C_3N_3PS_3$

Phosphorous trüsothiocyanate, 9Cl

Phosphorus isothiocyanate, 8Cl. Tris(thiocyanato-N) phosphorus (III)

[1858-23-7]

$P(NCS)_3$

M 205.2

Synth. from PCl_3 + $Pb(SCN)_2$, or from BCl_3 + Me_3SiNCS, or from PCl_3 + $MSCN$ (M = Na, K, NH_4). Colourless, highly refractive liq. Extremely reactive to H_2O and other protic reagents. d_4^{15} 1.483. Mp −4°. Bp_{15-17} 163-168° dec., Bp 118-120°, $Bp_{0.04}$ 75°. Polym. and dec. above 105°.

Oxide: see *Phosphoryl isothiocyanate, IC-003780*

$C_3N_3PrS_3$ IC-003787

Praseodymium(*III*) thiocyanate

$Pr(NCS)_3$

M 315.1
Normally not isol.; synth. by metathesis and used in soln.
Heptahydrate: [38785-80-7].
Hygroscopic green cryst. Contains mono-capped tetragonal antiprism $Pr(NCS)_3(H_2O)_4$ molecules, with one H_2O uncoord. Isostructural with La-Eu analogues.

C_3N_3Rh IC-003788

Rhodium(*III*) cyanide ($Rh(CN)_3$)
Rhodium tricyanide

$Rh(CN)_3$

M 180.9
Trihydrate: Rhodium(III) *cyanide trihydrate*
$C_3H_4N_3O_3Rh$ M 235.0
Prepared from $RhCl_3.3H_2O$ and KCN. Yellow powder.

Lawson, D.N. *et al, J. Chem. Soc. A*, 1966, 52 (*synth, ir*)

$C_3N_3S_3Sm$ IC-003789

Samarium(*III*) thiocyanate

$Sm(NCS)_3$

M 324.6
Generally synth. by metathesis and used as soln.
Hexahydrate: [102512-23-2].
Hygroscopic yellow cryst. Sol. H_2O. One H_2O uncoord.. Contains sq. antiprismatic $Sm(NCS)_3(OH_2)_5$ molecules. Sm→Gd form isomorphous compds.
Heptahydrate: Yellow cryst. Isomorphous with other rare earth heptahydrates.

$C_3N_3S_3Tb$ IC-003790

Terbium(*III*) thiocyanate

$Tb(NCS)_3$

M 333.1
Synth. by metathesis and used in soln.
Hexahydrate: Hygroscopic pale pink cryst. Sol. H_2O, EtOH. Probably 8-coord. containing $Tb(NCS)_3(OH_2)_5$ molecules.

Vincentini, G. *et al, Ann. Acad. Bras. Cienc.*, 1964, **36**, 123 (*synth*)
Hart, F.A. *et al, J. Inorg. Nucl. Chem.*, 1964, **26**, 579 (*synth*)

$C_3N_3S_3Tm$ IC-003791

Thulium(*III*) thiocyanate

$Tm(NCS)_3$

M 343.1
Synth. by metathesis and used as soln.
Hexahydrate: Hygroscopic green cryst. Sol. EtOH, H_2O. Presumed 8-coord. by analogy with Eu, Gd, Y compds., with one H_2O uncoord.

Vincentini, G. *et al, Ann. Acad. Bras. Cienc.*, 1964, **36**, 123 (*synth*)
Hart, F.A. *et al, J. Inorg. Nucl. Chem.*, 1964, **26**, 579 (*synth*)

$C_3N_3S_3Y$ IC-003792

Yttrium(*III*) thiocyanate

$Y(NCS)_3$

M 263.1
Not usually isol.; prep. by metathesis and used in soln.
Hexahydrate: [102512-25-4].
Hygroscopic colourless cryst. Sol. H_2O. 8-Coord. square antiprismatic at Y, one H_2O uncoord.
Tris-HMPA complex: [54092-04-5].
$C_{21}H_{54}N_{12}O_3P_3S_3Y$ M 800.7
Colourless cryst. Sol. toluene. Mp 177-199°. Prob. 6-coord. octahedral complex.

Cleve, P.T. *et al, Bull. Soc. Chim. Fr.*, 1872, **18**, 198 (*synth*)
Vincentini, G. *et al, Ann. Acad. Bras. Cienc.*, 1964, **36**, 123 (*synth, ir*)

Zhu, N. *et al, New Front. Rare Earth Sci. Appl., Proc. Int. Conf. Rare Earth Dev. Appl.*, 1985, **1**, 304; *CA*, 1986, **105**, 70454 (*cryst struct*)
Barr, D. *et al, Angew. Chem., Int. Ed. Engl.*, 1990, **29**, 285 (*synth, HMPA complex*)

$C_3N_3S_3Yb$ IC-003793

Ytterbium(*III*) thiocyanate

$Yb(NCS)_3$

M 347.2
Synth. by metathesis and used in soln.

Hexahydrate: Colourless hygroscopic cryst. Sol. EtOH, H_2O. Presumed 8-coord. by analogy with Eu, Gd, Y compds., with one H_2O uncoord.

Vincentini, G. *et al, Ann. Acad. Bras. Cienc.*, 1964, **36**, 123 (*synth*)
Hart, F.A. *et al, J. Inorg. Nucl. Chem.*, 1964, **26**, 579 (*synth*)
Kawamura, K. *et al, Trans. Natl. Res. Inst. Met. (Jpn.)*, 1965, **7**, 110; 1966, **8**, 10 (*ir*)

C_3N_3V IC-003794

Vanadium(*III*) cyanide ($V(CN)_3$), 11CI
Vanadium tricyanide
[82734-57-4]

$V(CN)_3$

M 128.9
Synth. from VCl_3 and NH_4CN in MeCN. Purple solid.
▷ Toxic.
Ammoniate: [82734-56-3]. *Amminetricyanovanadium*(III)
$C_3H_3N_4V$ M 146.0
Synth. by subliming $[NH_4]CN$ onto VCl_3 and then condensing NH_3 onto the mixture. Purple solid.
Paramagnetic, μ_{eff} = 2.4μ_B, Ir $\nu_{C\equiv N}$ 2120, 2095 cm^{-1}.

Dodsworth, E.S. *et al, Inorg. Chim. Acta*, 1982, **61**, 9 (*synth, uv-vis, ir, magnetism*)

$C_3N_3Zn^{\ominus}$ IC-003795

Tris(cyano)zincate(1−)
[18973-61-0]

$[Zn(CN)_3]^{\ominus}$

M 143.4 (ion)
Ph_4P salt: [73338-59-7].
Cryst.

Papp, S. *et al, Z. Anorg. Allg. Chem.*, 1979, **458**, 241 (*synth, thermal anal, ir*)

$C_3N_4NiO^{2\ominus}$ IC-003796

Tricyanonitrosylnickelate(2−), 8CI
[25703-99-5]

$[Ni(CN)_3(NO)]^{2\ominus}$

M 166.7 (ion)
Struct. unknown; may be tetrahedral. Many studies in soln. Synth. from Tetrakis(cyano-*C*)nickelate(2−), IC-004541 + NH_4OH(aq.), NH_2OH in $OH^{\ominus}$ (aq.) or NO in NH_3(l).
Di-K salt:
$C_3K_2N_4NiO$ M 244.9
Violet cryst.

Hieber, W. *et al, Z. Anorg. Allg. Chem.*, 1948, **256**, 145.
Griffith, W.P. *et al, J. Inorg. Nucl. Chem.*, 1958, **7**, 295.
Bonner, F.T. *et al, Inorg. Chem.*, 1981, **20**, 3155.

$C_3Nd_2O_9$ IC-003797

Neodymium(*III*) carbonate
[5895-46-5]

$Nd_2(CO_3)_3$

M 468.5
Red solid. Dec. >380°.
Octahydrate: [7184-63-6].
Red solid. Insol. H_2O. Loses H_2O at ~175°. 10-Coord., isostructural with La analogue. Various other hydrates also known.

[38245-38-4, 41836-16-2, 64360-95-8]

$C_3NpO_{11}^{4\ominus}$ IC-003798

Tris(carbonato)dioxoneptunate(*VI*)(4−)
[57512-27-3]

$[NpO_2(CO_3)_3]^{4\ominus}$

M 449.0 (ion)
Raman ν_{NpO_2} 802 cm^{-1}.
Tetra-K salt: [19633-87-5].
Air-stable yellow-green solid (dark green cryst.). 8-Coordinate, isomorphous with U analogue. Ir ν_{NpO_2} 873 cm^{-1}.
Tetra-NH_4 salt: [36568-63-5].
Dark green solid. Dec. to $PuO_2(CO_3)$ on standing in air.
Bis[hexaaminecobalt(3+)], dinitrate double salt: [63576-32-9].
Yellow-green solid. Dec. at 150-250° ultimately to Co_3O_4 + NpO_2.

[34842-42-7, 58568-81-3, 64519-49-9]

C_3OS IC-003799

Carbon oxide sulfide (C_3OS)
3-Thioxo-1,2-propadien-1-one, 9CI. Tricarbon oxide sulfide

O=C=C=C=S

M 84.0
Interatomic distances: C=O 116.3, C=C 128.9, C=S 155.4 pm. Formed in low yield from C_3O_2 + P_4S_{10}. Mp −70°.

Winnewisser, M. *et al, Chem. Phys. Lett.*, 1976, **37**, 270 (*synth, microwave*)
Gmelin Handbook Inorg. Chem., Syst. No. 14, 1977, **D5**, 1 (*bibl*)

C_3O_2 IC-003800

Carbon oxide (C_3O_2)
1,2-Propadiene-1,3-dione, 9CI. Malonic anhydride. Tricarbon dioxide. Carbon suboxide
[504-64-3]

O=C=C=C=O

M 68.0
Interatomic distances: O=C 116.3, C=C 128.9 pm. Synth. from malonic acid and P_4O_{10}. Used in synth. of malonates. Colourless, odorous gas, polymerising above 15° to red solid. Sl. sol. CS_2, xylene. d_4^0 1.114. Mp −111.3° (−107°). Bp 7°. Burns with blue, sooty flame. In H_2O → malonic acid.
▷ Lachrymator, in high concs. attacks eyes and respiratory organs. Highly toxic.

IC-003801

$C_3O_9Pr_2$

Praseodymium(*III*) carbonate

[5895-45-4]

$Pr_2(CO_3)_3$

M 461.8
Formed by dehyd. of octahydrate at 60-180°. Green solid. Dec. >420°.
Trihydrate: [64360-92-5].
Loses H_2O from 220→350°.
Octahydrate: [14948-62-0].
Green solid. Insol. H_2O. μ_{eff} = 3.43μ_B. Loses H_2O >60°. 10-coordinate; isostructural with Laanalogue.
[14475-17-3, 54397-87-4]

$C_3O_9Y_2$

IC-003802

Yttrium(*III*) carbonate

[556-28-5]

$Y_2(CO_3)_3$

M 357.8
Used in synth. of Y_2O_3 etc. Colourless solid.
Dihydrate: [36833-38-2].
Colourless solid. Insol. H_2O. Compound has composition $Y_2(CO_3)_3.2.35H_2O$ as cryst. from soln.
Mineral: [12199-46-1]. ***Tengerite***
Occurs in Sweden, Japan, Quebec and Texas. White powdery cryst. Formulated as $CaY_2(CO_3)_4(OH)_2.3H_2O$.
[5970-44-5, 19512-16-4, 38245-39-5]

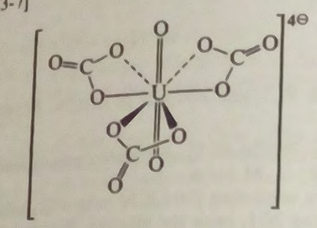
$C_3O_{11}U^{4\ominus}$

IC-003804

Tris(carbonato-*O*)dioxouranate(*VI*)(4−)

[24646-13-7]



M 450.0 (ion)
Hexagonal bipyramidal anion. Involved in carbonate leaching of uranium ores; potentially recoverable from oceans. Various salts are minerals.
Tetra-Na salt: [12076-52-7].
$C_3Na_4O_{11}U$ M 542.0
Unusual sol. in H_2O, rare for heavy metal carbonates, allows extraction of U from ores with conc. aq. Na_2CO_3. Light yellow triclinic cryst. Sol. H_2O. Ir ν_{OUO} 843 cm^{-1}. Raman $\nu_{(sym)OUO}$ 808 cm^{-1}.
Tetra-K salt: [17871-80-6].
$C_3K_4O_{11}U$ M 606.4
Pale yellow cryst. Isostructural with NH_4 salt. Ir ν_{OUO} 882 cm^{-1}. Raman $\nu_{(sym)OUO}$ 806 cm^{-1}.
Di-Ca salt: [64521-39-7]. ***Liebigite.*** *Urothallite*
$C_3Ca_2O_{11}U$ M 530.2
Liebigite (undecahydrate) occur as secondary mineral with widespread occurrence. Yellow-green solid (orthorhombic). Mp >160° dec. Obt. as deca- and nonahydrates. Similar compds. can be prepd. for other M(*II*) (Sr, Ba, Cu, Ni, Co).
Ca, di-Na salt: [12202-87-8]. ***Andersonite***
$C_3CaNa_2O_{11}U$ M 536.1
Andersonite (hexahydrate) occurs as secondary mineral at sites in USA and New Mexico. Yellow-green hexagonal cryst. Obt. as hexahydrate.
Ca, Mg salt: [12202-86-7]. ***Swartzite***
$C_3CaMgO_{11}U$ M 514.4
Occurs as secondary mineral at sites in USA. Bright green cryst. + $12H_2O$. Dull yellowish white (anhydrous).
Tetra-NH_4 salt: [18077-77-5]. *AUC*
$C_3H_{16}N_4O_{11}U$ M 522.2
Important in prep. of homogenous (U, Pu)O_2 fuels, and in conversion of UF_6 + $U_2(NO_3)_2$ to UO_2. Lemon-yellow or green-yellow monoclinic cryst. On heating forms U_3O_8, NH_3, CO_2. Dec. >150°.

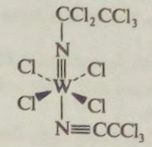
[34822-24-7]



M 685.3
Initially postulated as $WCl_6.2Cl_3CCN$ but cryst. struct. showed chlorination of Cl_3CCN had occurred, with formation of a W≡N bond. Interatomic distances: W≡N 170, W—N 237 pm. Synth. from WCl_6 refluxed with excess Cl_3CCN in sealed ampoule. Yellow cryst. (CH_2Cl_2), non-conducting in $MeNO_2$. Many similar compds. of formula $[WCl_4(NCRCl_2)]$.RCN are known, Ir ν_{CN} 2300, $\nu_{W\equiv N}$ 1296, 1288 cm^{-1}.

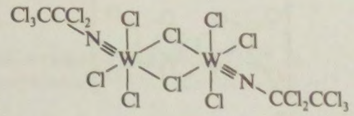
$C_4Cl_{18}N_2W_2$

Di-μ-chlorohexachlorobis(pentachloroethylimido)ditungsten(*VI*)

Di-μ-chlorohexachlorobis[1,1,2,2,2,2-pentachloroethanaminato(2−)]ditungsten, 9CI, 8CI. Di-μ-chlorobis[trichloro(pentachloroethylnitrido)tungsten(VI)]

[32594-38-0]



M 1081.9
Interatomic distance W≡N 171 pm. Synth. from WCl_5 + Cl_3CCN. Orange-yellow cryst. (CH_2Cl_2).

Monomer: Tetrachloro(pentachloroethylimido)tungsten(VI)
C_3Cl_9NW M 540.9
Unknown except as adducts with a wide range of ligands, see eg. Tetrachloro(pentachloroethylimido)(trichloroacetonitrile)tungsten(*VI*), IC-003858.

Drew, M.G.B. *et al*, *J. Chem. Soc., Chem. Commun.*, 1971, 231 (*cryst struct*)

$C_4CoN_4^{2\ominus}$

Tetrakis(cyano-*C*)cobaltate(2−), 11CI

Tetracyanocobaltate(II)(2−)

$[Co(CN)_4]^{2\ominus}$

M 163.0 (ion)
Rare example of low spin square planar Co(*II*) with a single type of unidentate ligand. Stabilised by large cation. Paramagnetic.

Bis[bis(triphenylphosphine)iminium] salt: [90899-45-9].
Pale blue solid. Sol. MeCN.

Carter, S.J. *et al*, *J. Am. Chem. Soc.*, 1984, **106**, 4265 (*synth, ir, magnetism, cryst struct*)

$C_4CoN_4^{\ominus}$

Tetrakis(cyano-*C*)cobaltate(1−), 11CI, 10CI

Tetracyanocobaltate(III)

$[Co(CN)_4]^{\ominus}$

M 163.0 (ion)
Catalyst used in synth. of 1-cyanocycloalkenes.

Ph_4P salt: [63088-02-8].
Synth. by thermal dec. of $[Ph_4P]H_3[Co(CN)_6]$ under N_2 at 210-220°. Turquoise blue cryst. Sol. MeOH, MeCN, DMSO, DMF; insol. H_2O. Ir ν_{CN} 2171, 2137 cm^{-1}. μ_{eff} = 1.85 μ_B (298K).

[86023-82-7]

$C_4CoN_4O_6S_2^{5\ominus}$

Tetrakis(cyano-*C*)bis(sulfito-*S*)cobaltate(5−), 8CI

Tetracyanodisulfitocobaltate(III)

$[Co(CN)_4(SO_3)_2]^{5\ominus}$

M 323.1 (ion)
trans-Octahedral anion.

Penta-Na salt: [29012-53-1].
Orange-yellow solid. Sol. H_2O.

Chen, H.H. *et al*, *Inorg. Chem.*, 1966, **5**, 1913 (*synth, uv, kinetics, raman*)
Maki, N. *et al*, *Bull. Chem. Soc. Jpn.*, 1970, **43**, 2450 (*synth, electrochem*)

$C_4CoN_4S_4^{2\ominus}$

Tetrakis(thiocyanato-*N*)cobaltate(2−)

Tetraisothiocyanatocobaltate(II)

[18904-81-9]

$[Co(NCS)_4]^{2\ominus}$

M 291.2 (ion)
Contains tetrahedrally coord. $Co^{2\oplus}$.

Di-Na salt: [42186-76-5].
Blue cryst. + $8H_2O$.

Di-K salt: [19453-13-5].
Blue cryst. + $4H_2O$. μ_{eff} = 4.38 μ_B (4.47).

Hg(II) *salt:* [27685-51-4].
$C_4CoHgN_4S_4$ M 491.8
Used as calibrant in magnetic susceptibility determinations; also in gravimetric estimation of cobalt. Blue solid.

Bis-Me_4N salt: [14052-14-3].
Blue cryst. Sol. Me_2CO, $PhNO_2$, $MeNO_2$. Mp 197°. μ_{eff} = 4.40 μ_B.

$C_4CoO_4^{\ominus}$

Tetracarbonylcobaltate(1−), 10CI

Cobalt tetracarbonyl(1−)

[14971-27-8]

$[Co(CO)_4]^{\ominus}$

M 170.9 (ion)
Catalyst for the carbonylation of halohydrocarbons to carboxylic acids, esp. under phase-transfer catalysis condition.
▷ GF9520000.

Li salt: [15616-75-8].
C_4CoLiO_4 M 177.9
White cryst.

Na salt: [14878-28-5].
C_4CoNaO_4 M 193.9
White solid.

K salt: [14878-26-3].
C_4CoKO_4 M 210.0
No phys. props. reported.

In(3+) salt: [15820-67-4].
$C_{12}Co_3InO_{12}$ M 627.7
Red cryst.

Tl(1+) salt: [38991-21-8].
C_4CoO_4Tl M 375.3
Yellow cryst. (H_2O). Mp 120-130° dec. Ir ν_{CO} 2043, 1972, 1937 cm^{-1} (CH_2Cl_2).
▷ Toxic.

IC-003866

$C_4CrNO_5^{\ominus}$

Tetracarbonylnitrosylchromate(1−)

$[Cr(CO)_4NO]^{\ominus}$

M 194.0 (ion)
Trigonal bipyramidal with equatorial NO.

Bis(triphenylphosphine)iminium salt: [116426-70-1].
Red-brown cryst. Ir ν_{CO} 1993, 1895, 1850; ν_{NO} 1608 (1577) cm^{-1} (THF); nmr: $\delta(^{15}N)$ 448.5 ppm (CH_2Cl_2).

Mantell, D.R. *et al*, *J. Organomet. Chem.*, 1988, **347**, 333.

IC-003867

$C_4CrN_4S_4^{2\ominus}$

Tetrakis(thiocyanato-*N*)chromate(*II*)(2−), 10CI

Tetraisothiocyanatochromate(II)(2−)

$[Cr(NCS)_4]^{2\ominus}$

M 284.3 (ion)
Many salts of the kind $A_2[Cr(CNS)_4]$ are known, whose colour/struct. depend on the synthetic conditions.

brown-form
Square planar anion.

Bis-tetrabutylammonium salt: [73494-34-5].
Brown cryst. Insol. H_2O; spar. sol. EtOH. $\mu_{eff} = 4.76\mu_B$ (90-295K).

blue-form
Bis[μ-(thiocyanato-N:S)]hexakis(thiocyanato-N) dichromate(II)(4−)
Dimeric anion with 5-coordinate Cr.

Bis-tetrabutylammonium salt: Blue cryst. V. sol. Me_2CO. Antiferromagnetic.

Larkworthy, L.F. *et al*, *J. Chem. Soc., Dalton Trans.*, 1980, 262 (*synth, ir, uv, magnetism*)

IC-003868

$C_4CrO_4^{4\ominus}$

Tetracarbonylchromate(4−)

$[Cr(CO)_4]^{4\ominus}$

M 164.0 (ion)

Tetra-Na salt: [67202-62-4].
$C_4CrNa_4O_4$ M 255.9
Used to synth. other organometallics. Yellow powder, best used *in situ*. Ir ν_{CO} 1657w, 1462s,br cm^{-1} (silicone mull).
▷ Extremely pyrophoric; may deflagrate or explode.

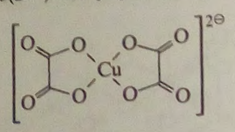
Lin, J.T. *et al*, *J. Am. Chem. Soc.*, 1983, **105**, 2296 (*synth, ir, haz, use*)

IC-003869

$C_4CuO_8^{2\ominus}$

Bis(oxalato)cuprate(*II*)(2−)

Bis[ethanedioato(2−)-O,O′]cuprate(2−), 10CI



M 239.5 (ion)

Di-Na salt: [73505-53-0].
Light blue cryst. + $2H_2O$. Exhibits weak antiferromagnetic coupling within chains of stacked $[Cu(C_2O_4)_2]^{2\ominus}$ units.

Di-K salt: [53513-79-4].
Blue cryst. + $2H_2O$.

Propylenediammonium(2+) salt: [78307-66-1].
Royal blue cryst. Anions interact with only 2 neighbours to form linear chain arrangement. Strongly coupled 1D ferromagnetic system.

Bis(benzylammonium) salt: [78307-65-0].
Pale blue platelets. Each anion interacts with 4 neighbours to form infinite layer struct. Weakly coupled 2-D ferromagnet.

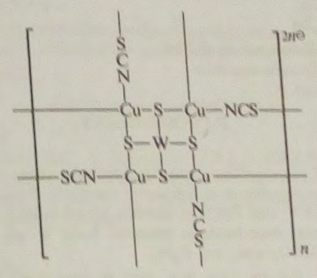
$C_4Cu_4N_4S_8W^{2\ominus}$

IC-003870

Tetrakis[(thiocyanato-*N*)cuprate]tetra-μ_3-thioxotungstate(2−), 11CI

Tetrakis(μ_3-sulfido)tetrakis[(μ-isothiocyanato-N,S)copper(I)] tungstate(VI)(2−)



M 798.6 (ion)
Polymeric, solid state struct. dependent on cation. In soln., both salts appear to possess same anion.

Bis-Me_4N salt: [106305-72-0].
Synth. from $(NMe_4)_2WS_4$, CuCl + KSCN in $MeCN/CH_2Cl_2$. Red cryst. Insol. most org. solvs.; sol. DMF. Possesses 3-D polymeric struct., consisting of tetrahedral WS_4 core and four bridging Cu atoms. Ir ν_{CN} 2122, 2087 cm^{-1}.

Bis-Ph_4P salt: [111349-54-3].
Orange microcryst. Sol. DMF, MeCN; insol. Et_2O. In solid state possesses 2-D network of infinite sheets, with PPh_4 cations in between. One Cu atom interacts weakly with S on NCS of adjacent chain to link sheets. Ir ν_{CN} 2109s, 2090s cm^{-1}.

Manoli, J.M. *et al*, *J. Chem. Soc., Chem. Commun.*, 1986, 1557 (*cryst struct, ir*)

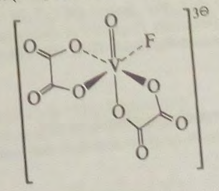
$C_4FO_9V^{3\ominus}$

Fluorobis(oxalato)oxovanadate(*IV*)(3−)

Bis[ethanedioato(2−)-O,O′]fluoroxovanadate(3−), 9CI



M 261.9 (ion)
cis-Octahedral struct.

Tri-Na salt: [60125-80-6].
Synth. by dissolving $NaVO_3$ in aq. oxalic acid and adding NaF. Pale blue solid + $6H_2O$.

Tri-NH_4 salt: [60125-81-7].
Synth. similarly to the Na salt.

Reiskamp, H. *et al*, *Z. Naturforsch., B*, 1976, **31**, 537 (*synth, cryst struct*)

IC-003872

$C_4F_3FeO_4P$

Tetracarbonyl(phosphorous trifluoride)iron, 9CI

[16388-47-9]

$Fe(CO)_4PF_3$

M 255.8
Stereochemically nonrigid. Yellow air- and moisture-sensitive liq. Stable in hydrocarbon solvs. attacked rapidly by Me_2CO and EtOH. Immisc. H_2O.

Clark, R.J. *et al*, *Inorg. Chem.*, 1964, **3**, 1395 (*synth*)

$C_4F_{12}HgN_2S_4$

Bis[bis(trifluoromethylthio)amino]mercury
*1,1,1-Trifluoro-*N*-[(trifluoromethyl)thio]methanesulfenamide mercury(2+) salt (1:1), 9CI*
[61313-71-1]

$Hg[N(SCF_3)_2]_2$

M 632.8
Prepd. from $(CF_3Hg)_2O + (CF_3S)_2NH$.

Fiegler, K.H. *et al, Chem.-Ztg.*, 1976, **100**, 339 (*synth, pmr, F-19 nmr, ms, ir*)

IC-003884

$C_4F_{12}N_2O_8S_4Xe$

Bis[bis(trifluoromethanesulfonyl)amido]xenon
Xenon bis[iminobis[(trifluoromethyl)sulfonate]]
[82113-64-2]

$(F_3CSO_2)_2N—Xe—N(SO_2CF_3)_2$

M 691.5
Synth. from $XeF_2 + Me_3SiN(SO_2CF_3)_2$ in CF_2Cl_2 at 10°. White cryst., stable at 22° under N_2. Dec. at 72°.

Foropoulos, J.J. *et al, J. Am. Chem. Soc.*, 1982, **104**, 4260 (*synth, F-19 nmr, ms, raman*)

IC-003885

$C_4F_{12}N_2S_5$

Tetrakis(trifluoromethylmercapto)diaminosulfane
*N,N′-Thiobis[1,1,1-trifluoro-*N*-[(trifluoromethyl)thio] methanesulfenamide], 9CI*
[53355-89-8]

$(F_3CS)_2NSN(SCF_3)_2$

M 464.3
Synth. from $(F_3CS)_2NH + SCl_2$. Yellow liq.; unstable at r.t. $Bp_{0.2}$ 33°.

Haas, A. *et al, Z. Anorg. Allg. Chem.*, 1974, **406**, 185 (*synth, ir, F-19 nmr, ms*)

IC-003886

$C_4F_{12}N_2S_6$

Tetrakis(trifluoromethylmercapto)diaminodisulfane
*N,N′-Dithiobis[1,1,1-trifluoro-*N*-[(trifluoromethyl)thio] methanesulfenamide], 9CI*
[53355-90-1]

$(F_3CS)_2NSSN(SCF_3)_2$

M 496.4
Formed from $(F_3CS)_2NH + S_2Cl_2$. Yellow liq. $Bp_{0.08}$ 46°. Slowly dec. at r.t.

Haas, A. *et al, Z. Anorg. Allg. Chem.*, 1974, **406**, 185 (*synth, ir, F-19 nmr, ms*)

IC-003887

$C_4F_{12}Te$

Difluorobis(pentafluoroethyl)tellurium
Bis(perfluoroethyl)tellurium difluoride
[51255-76-6]

$(F_3CCF_2)_2TeF_2$

M 403.6
Cryst. solid. Mp 57°. Tetrahedral.

Paige, H.L. *et al, Inorg. Nucl. Chem. Lett.*, 1973, **9**, 277 (*synth*)
Lau, C. *et al, Can. J. Chem.*, 1985, **63**, 2273 (*synth, ir, raman, F-19 nmr*)

IC-003888

C_4FeHgO_4

Tetracarbonylmercurioiron, 8CI
[24980-89-0]

$[Hg[Fe(CO)_4]]_n$

M 368.4
Polymeric. Small orange-yellow cryst. Sol. Me_2CO, EtOH, Et_2O, Py, $PhNO_2$.

Hock, H. *et al, Ber.*, 1929, **62**, 431 (*synth, props*)
Beck, W. *et al, J. Organomet. Chem.*, 1967, **10**, 307 (*ir*)
Takano, T. *et al, Bull. Chem. Soc. Jpn.*, 1971, **44**, 431 (*ir, mössbauer*)

IC-003889

$C_4FeI_2O_4$

Tetracarbonyldiiodoiron(*II*), 9CI
Diiodotetracarbonyliron(II). *Tetracarbonyliron diiodide*
[14878-30-9]

$Fe(CO)_4I_2$

M 421.6
Octahedral.

cis-form [14911-55-8]
Red-black cryst. *trans*-form also known.

trans-form [15616-56-5]

Hieber, W. *et al, Ber.*, 1928, **61**, 1717.
Baraclough, C.C. *et al, J. Chem. Soc.*, 1961, 2582 (*ir*)

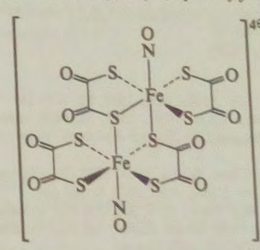
IC-003890

$C_4FeNO_5S_4^{2\ominus}$

Bis(dithiooxalato)nitrosylferrate(2−)
Bis[ethanebis(thioato)(2−)-S,S′]nitrosylferrate(2−)



dimer

M 326.1 (ion)
Dimeric. Synth. from $Fe(S_2C_2O_2)_3^{3\ominus}$ salts heated to 70° in aq. $NaNO_2$ or $MeNO_2$. Superexchange mechanism present between Fe centres.

Dimer, tetra-K salt: [125472-08-4].
$C_8Fe_2K_4N_2O_{10}S_8$ M 808.7
Synth. from aq. $K_2C_2O_2S_2 + FeCl_3.6H_2O$ followed by addn. of KNO_2. Black cryst. + $2H_2O$ (H_2O). Sol. H_2O.
Dimer, tetrakis(benzyltriphenylphosphonium) salt: Green cryst. Mp 158-161°. $\mu_{eff} = 2.22\mu_B$.

Coucouvanis, D. *et al, J. Am. Chem. Soc.*, 1970, **92**, 5004 (*synth, esr, magnetism*)
Birchall, T. *et al, Inorg. Chem.*, 1976, **15**, 376 (*mössbauer*)

IC-003891

$C_4FeN_4O_4^{2\ominus}$

Tetrakis(cyanato-*N*)ferrate(2−)
Tetrakis(isocyanato)ferrate(II)(2−)

$[Fe(NCO)_4]^{2\ominus}$ (T_d)

M 223.9 (ion)
Bis-Et_4N salt: Pale brown solid (impure due to easy oxidn.); hygroscopic.

Forster, D. *et al, J. Chem. Soc.*, 1965, 262, 454 (*ir, synth*)

$C_4FeN_4O_4^{\ominus}$ – $C_4HFeO_4^{\ominus}$

$C_4FeN_4O_4^{\ominus}$ IC-003892

Tetrakis(cyanato-*N*)ferrate(1−)

Tetrakis(isocyanato)ferrate(III)(*1−*)

$[Fe(NCO)_4]^{\ominus}$ (T_d)

M 223.9 (ion)

Et_4N salt: [21279-20-9].
Sol. MeCN.

Ph_4As salt: Synth. from $[Ph_4As][FeCl_4]$ + AgNCO in Me_2CO. Orange cryst. (Me_2CO). Mp 159°.

Forster, D. *et al, J. Chem. Soc.*, 1965, 262 (*ir, synth*)
Day, P., *Inorg. Chem.*, 1966, **5**, 1619 (*uv*)
Edwards, P.R. *et al, J. Chem. Phys.*, 1968, **49**, 211 (*mössbauer*)

$C_4FeO_4^{2\ominus}$ IC-003893

Tetracarbonylferrate(2−)

Collman's reagent

[51222-96-9]

$[Fe(CO)_4]^{2\ominus}$ (T_d)

M 167.8 (ion)
Used in org. synth. as a transition metal analogue of Grignard reagents. Sol. THF (0.007 mol dm^{-3}). pK_a 14. Ir ν_{CO} 1730 cm^{-1}.

Di-Na salt: [14878-31-0].
Usually generated and used *in situ*. V. air-sensitive orange cryst. (MeOH/THF). Forms cryst. dioxan adduct.

Di-K salt: [16182-63-1].
Cryst. (MeOH/THF).

[22321-35-3]

C_4FeO_4Zn IC-003894

Tetracarbonyl(zinc)iron, 9CI

Tetracarbonylzinciotron, 8CI

[32458-92-7]

$Zn[Fe(CO)_4]$

M 233.2
Prepd. in aq. soln. and not isol.

Gsiembeck, F. *et al, J. Am. Chem. Soc.*, 1971, **93**, 1909 (*synth*)

$C_4GeN_4O_4$ IC-003895

Germanium(*IV*) isocyanate

Tetrakis(cyanato-N)germanium. Tetraisocyanatogermane

[4756-66-5]

$Ge(NCO)_4$

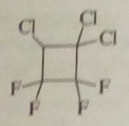
M 240.6
Prepd. from $GeCl_4$ + AgCNO in C_6H_6. Colourless liq. Rapidly hydrol. d^{24} 1.7694. Mp −8°. Bp 204°. n_D^{25} 1.4793. Corresp. cyanate compd. unknown.

Laubengayer, A.W. *et al, J. Am. Chem. Soc.*, 1943, **65**, 1783 (*synth*)
Forbes, G.S. *et al, J. Am. Chem. Soc.*, 1943, **65**, 2271 (*synth*)
Miller, F.A. *et al, Spectrochim. Acta*, 1961, **17**, 977 (*ir, raman*)

$C_4HCl_3F_4$ IC-003896

1,1,4-Trichloro-2,2,3,3-tetrafluorocyclobutane

Fluorocarbon C-324



M 231.4

(±)-form
Synth. by the cycloaddition reaction of $CF_2{=}CF_2$ and $CCl_2{=}CHCl$. d_4^{25} 1.572. Bp 109-110.5°. n_D^{25} 1.3995.

Coffman, D.D. *et al, J. Am. Chem. Soc.*, 1949, **71**, 490 (*synth*)

$C_4HF_9O_6S_3$ IC-003897

Tris(trifluoromethylsulfonyl)methane

[60805-12-1]

$HC(SO_2CF_3)_3$

M 412.2
Synth. from CF_3SO_2F and MeMgBr via $CH_2(SO_2CF_3)_2$. V. strong acid. Colourless, v. hygroscopic solid. Mp 69.2°.

K salt: [114395-69-6].
Synth. from $HC(SO_2CF_3)_3$ and K_2CO_3. Colourless needle-shaped cryst.

Rb salt: [114395-70-9].
Synth. from $HC(SO_2CF_3)_3$ and Rb_2CO_3. Colourless cryst.

Cs salt: [114395-68-5].
Synth. from $HC(SO_2CF_3)_3$ and Cs_2CO_3. Colourless cryst. (hot H_2O). Spar. sol. H_2O. Subl. 30° *in vacuo*.

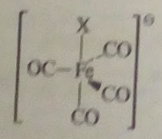
Ag salt: [114395-71-0].
Synth. from $HC(SO_2CF_3)_3$ and Ag_2CO_3. Colourless cryst. turns brown in air.

Turowsky, L. *et al, Inorg. Chem.*, 1988, **27**, 2135 (*synth, salts, reactions, ir*)

$C_4HFeO_4^{\ominus}$ IC-003898

Tetracarbonylhydroferrate(1−), 9CI, 8CI

[18716-80-8]



X = H

M 168.8 (ion)
Used in org. reductions; $Na^{\oplus}$ and $K^{\oplus}$ derivs. usually prepd. and used *in situ* without isol.

Na salt: [53558-55-7].
$C_4HFeNaO_4$ M 191.8
Obt. quantitatively in THF from $Na_2Fe(CO)_4$ with 1 equiv. AcOH. White solid. Forms 1:1 solvate with MeOH and EtOH.

C_4HIrO_4 – $C_4H_2Cl_4Ir_2O_4$

Me_4N salt: [63814-56-2].
Light-pink cryst. Mod. air-sensitive.

Bis(triphenylphosphine)iminium salt: [56791-54-9].
$C_{40}H_{31}FeNO_4P_2$ M 707.4
V. pale-yellow plates (EtOH/EtOAc).

Methyltriphenylphosphonium salt: Pale-yellow cryst. (butanol). Mp 90°.

C_4HIrO_4 IC-003899

Tetracarbonylhydroiridium, 10CI

Hydridotetracarbonyliridium. Tetracarbonyliridium hydride

[25282-12-6]

$HIr(CO)_4$

M 305.2
Formed under high pressure from $Ir_4(CO)_{12}$, CO and H_2. Dec. to $Ir_4(CO)_{12}$ on removal of pressure. Ir ν_{CO} 2054m, 2031s, 1999w cm^{-1} (pet. ether).

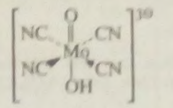
Whyman, R., *J. Chem. Soc., Dalton Trans.*, 1972, 2294 (*synth, ir*)
Vidal, J.L. *et al, Inorg. Chem.*, 1981, **20**, 249 (*synth, ir*)

$C_4HMoN_4O_2^{3\ominus}$ IC-003900

Tetrakis(cyano-*C*)hydroxyoxomolybdate(3−), 9CI

Oxohydroxotetracyanomolybdate(IV)(*3−*)

[36594-14-6]



M 233.0 (ion)
Octahedral anion.

trans-form [52920-70-4]
Blue molybdate ion is the primary aq. sp. present from pH10 - pH13: $[MoO(OH)(CN)_4]^{3\ominus} + H_2O \rightleftharpoons [MoO(H_2O)(CN)_4]^{2\ominus} + OH^{\ominus}$.

Tri-K salt: [55493-42-0].
Blue solid.

Tris(ethylenediamine)chromium(III) *salt:* [55493-44-2].
$C_{10}H_{35}CrMoN_{10}O_3$ M 465.3

$C_4H_2Br_4O_5Zr$ IC-003902

Bis(dibromoacetato-*O,O'*)oxozirconium(*IV*), 11CI

[97894-99-0]

$(Br_2CHCOO)_2ZrO$

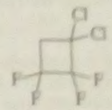
M 540.8
Synth. from $ZrOCl_2$ + $Br_2CHCOOH$. Air-stable white solid + 1 $Br_2CHCOOH$. Sol. $MeNO_2$. Mp >270°.

Puri, J.K. *et al, Inorg. Chim. Acta*, 1985, **101**, 135 (*synth, ir, pmr, cmr*)

$C_4H_2Cl_2F_4$ IC-003903

1,1-Dichloro-2,2,3,3-tetrafluorocyclobutane

Fluorocarbon C-334



M 196.9
Synth. by the cycloaddition reaction of $CF_2{=}CF_2$ and $CH_2{=}CCl_2$. d_4^{25} 1.530. Bp 84-84.7°. n_D^{25} 1.3702.

Coffman, D.D. *et al, J. Am. Chem. Soc.*, 1949, **71**, 490 (*synth*)

$C_4H_2Cl_4Ir_2O_4$ IC-003904

Tetracarbonyldi-μ-chlorodichlorodihydrodiiridium

Di-μ-chlorodichlorodihydrotetracarbonyldiiridium. Tetracarbonyltetrachlorodihydrodiiridium

$[IrHCl_2(CO)_2]_2$

M 640.3
Bronze needles (EtOH), probably dihydrate. Mp >192° dec. Ir ν_{NH} 2105, ν_{CO} 2077, 2044 cm^{-1} (KCl).

Monomer: Dicarbonyldichlorohydridoiridium
$C_2HCl_2IrO_2$ M 320.1
Unknown.

Shaw, B.L. *et al, J. Chem. Soc. A*, 1967, 1683 (*synth, ir*)

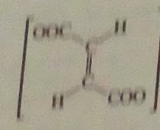
IC-003905

$C_4H_2FeO_4$

Iron(*II*) fumarate

Ferrous fumarate, USAN. Iron(II) (*E*)-*1,3*-*butenedioate.*
Feostat. Ferrocap. Toleron. Numerous proprietary names

[141-01-5]



M 169.9
Synth. from $FeSO_4$ + Na fumarate in H_2O. Haematinic. Air-stable red-brown solid. Insol. EtOH; sl. sol. H_2O. Mp >280°.
B-LT1930000.

$C_4H_2MoN_4O_2^{2\ominus}$

IC-003907

Aquatetrakis(cyano-*C*)oxomolybdate(*IV*)(2−), 9CI

Oxoaquotetracyanomolybdate(2−)

[57298-65-4]

$[MoO(OH_2)(CN)_4]^{2\ominus}$

M 234.0 (ion)
Octahedral anion. Model for nitrogenase systems.

Trans-form

Di-K salt: [59808-17-2].
Sol. H_2O. Attempted isol. gave polymeric products.

Cd salt: [77370-93-5].
$C_4H_2CdMoN_4O_2$ M 346.4
Violet-blue cryst. + $6H_2O$. Previously formulated as $Cd[Mo(OH)_2(CN)_4].6H_2O$. On drying *in vacuo* loses H_2O and becomes grey-brown.

Bis(ethylenediamine)platinum(II) *salt:* [55493-47-5].
$C_8H_{18}MoN_8O_2Pt$ M 549.3
Blue cryst. + $2H_2O$.

Ni(II) *salt:* [98119-01-8].
Dark green solid + $2H_2O$.

Zn(II) *salt:* [98119-00-7].
Brown solid + $2H_2O$.

Co(II) *salt:* [97698-43-6].
$C_4H_2CoMoN_4O_2$ M 292.9
Synth. from $CoCl_2$ and photochemically-generated K salt of anion. Green solid + $2H_2O$.

Bis-Ph_4P salt: [86568-28-7].
Monoclinic green cryst. + $4H_2O$. Ir $\nu_{Mo=O}$ 920 cm^{-1}, Mo=O 172 pm.

Bis-Ph_4As salt: [86568-29-8].
Monoclinic blue cryst. + $4H_2O$. Ir $\nu_{Mo=O}$ 980 cm^{-1}, Mo=O 160 pm.

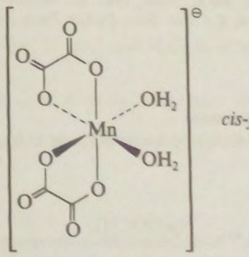
$C_4H_4MnO_{10}^{\ominus}$

Diaquabis(oxalato)manganate(*III*)(1−)

Diaquabis[ethanedioato(2−)-O,O']manganate(1−), 11CI

[16244-66-9]



cis-form

M 267.0 (ion)

Both *cis* and *trans*-forms known. Dissolving either isomer in H_2O gives a yellow soln. in which the *trans* isomer predominates. The solns. dec. easily, even in the dark, to give MnC_2O_4, CO_2 and $C_2O_4^{2\ominus}$.

cis-form

K salt: [36870-03-8].
Synth. from powdered $KMnO_4$ and $H_2C_2O_4.2H_2O$ in EtOH at 0° followed by addition of KOH in EtOH to the filtered brown soln. Yellow-green ppt.

K salt, trihydrate: [34032-52-5].
Synth. from stoichiometric amounts of powdered $KMnO_4$ and $H_2C_2O_4$ in H_2O at 1°. Green cryst. (95% EtOH).

trans-form

K salt, trihydrate: Synth. as for the *cis*-complex but using 1% excess $H_2C_2O_4$ and less EtOH to ppt. complex. Golden yellow cryst.

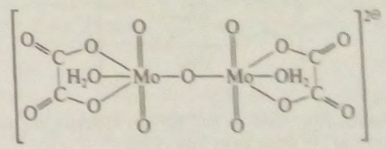
$C_4H_4Mo_2O_{15}^{2\ominus}$

Diaquabis(oxalato)-μ-oxotetraoxodimolybdate(*VI*)(2−)

Diaquabis[ethanedioato(2−)-O,O']-μ-oxotetraoxodimolybdate(2−), 10CI

[63312-76-5]



M 483.9 (ion)

Synth. by treatment of $[Mo_2O_4(C_2O_4)_2(OH)_2]^{2\ominus}$ with $HCrO_4^{\ominus}$. Forms a distorted octahedra.

Di-Na salt: [99635-90-2].
Synth. by treatment of $H_2C_2O_4.2H_2O$ with MoO_3 in presence of NaCl. White cryst. (H_2O). Diamagnetic.

Di-K salt: [22827-21-0].
Synth. by treatment of $H_2C_2O_4.2H_2O$ and $H_2MoO_4.H_2O$ with KCl in H_2O. Colourless cryst. (H_2O). Actually a binuclear complex of Mo(*VI*), and not of Mo(*V*) as in $C_4H_4K_2Mo_2O_{14}$, as originally thought. Shows photochromism in visible light.

Di-Rb salt: [63312-74-3].
Synth. by treatment of $H_2C_2O_4.2H_2O$ with MoO_3 in presence of RbCl. White cryst. (H_2O). Diamagnetic.

Sr salt: [95528-09-9].
Synth. by treatment of $H_2C_2O_4.2H_2O$ with MoO_3 in presence of $SrCl_2$. White cryst. + $2H_2O$ (H_2O). Diamagnetic.

Ba salt: [96342-50-6].
Synth. by treatment of $H_2C_2O_4.2H_2O$ with MoO_3 in presence of $BaCl_2$. White cryst. + $2H_2O$ (H_2O). Diamagnetic.

Di-NH_4 salt: [77115-78-7].
Synth. by treatment of $H_2C_2O_4.2H_2O$ and $H_2MoO_4.H_2O$ with NH_4Cl in H_2O. Shows photochromism in visible light.

IC-003954

$C_4H_4O_9V^{2\ominus}$

Tetrakis(formato-*O*)oxovanadate(*IV*)(2−), 11CI

(*μ-Formato*)*triformatooxovanadate*(IV)(*2*−)

$[VO(OOCH)_4]^{2\ominus}$

M 247.0 (ion)
Octahedral polymer with formate groups bridging *cis*-positions.

Di-K salt: [103572-85-6].
Synth. by dissolving K_2CO_3 and VO(formate)$_2$ in formic acid/MeOH then adding excess formic acid/MeOH. Blue solid. Paramagnetic; $\mu_{eff} = 1.79\mu_B$ (298K).

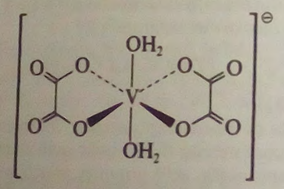
Gilson, T.R. *et al, J. Chem. Soc., Dalton Trans.*, 1986, 895 (*synth, cryst struct, esr, magnetism*)

IC-003955

$C_4H_4O_{10}V^{\ominus}$

Diaquabis(oxalato)vanadate(*III*)(1−)

Diaquabis[ethanedioato(2−)-O,O′]vanadate(III)(*1*−), *11CI*



M 263.0 (ion)
Octahedral.

***trans*-form**

Cs salt: [97385-43-8].
Synth. from $VCl_3.6H_2O$ and oxalic acid in H_2O followed by addn. of CsCl. Red-purple solid + $4H_2O$ (H_2O).

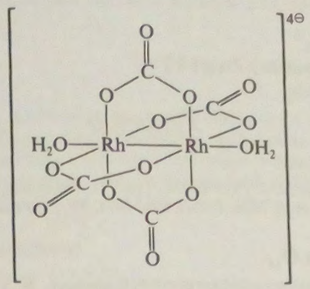
$MeNH_3$ salt: [97107-09-0].
Synth. as for the Cs salt using $[MeNH_3]Cl$. Red-purple solid + $4.5H_2O$ (H_2O).

Grey, I.E. *et al, Acta Crystallogr., Sect. C*, 1985, **41**, 681 (*synth, cryst struct*)

IC-003956

$C_4H_4O_{14}Rh_2^{4\ominus}$

Diaquatetrakis(μ-carbonato)dirhodate(*II*)(4−), 10CI



M 481.8 (ion)
Carbonate analogue of $M_2(O_2CR)_4$ struct.

Tetra-Cs salt: [72207-19-3].
Dark blue cryst. + $6H_2O$.

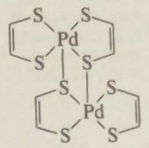
Cotton, F.A. *et al, Inorg. Chem.*, 1980, **19**, 320 (*synth, cryst struct*)

IC-003957

$C_4H_4PdS_4$

Bis(1,2-ethenedithiolato-*S*,*S*′)palladium

Bis(1,2-dithiolatoethene)palladium



dimer

M 286.7
Prepd. by I_2 oxidation of $[PdS_4C_4H_4]^{\ominus}$. Cryst. (CS_2).

Dimer: [35163-38-3]. *Tetrakis[1,2-ethenedithiolato(2−)-S,S′]dipalladium, 9CI*
$C_8H_8Pd_2S_8$ M 573.5

Browall, K.W. *et al, Inorg. Chem.*, 1972, **11**, 1800 (*synth, cryst struct*)

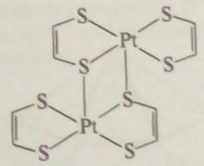
IC-003958

$C_4H_4PtS_4$

Bis(1,2-ethenedithiolato-*S*,*S*′)platinum, 9CI

Bis(1,2-dithiolatoethene)platinum

[35163-39-4]



M 375.4
Dimeric struct. with PtS_4 square planar units linked by Pt—Pt interaction of 277 pm.

Dimer: Tetrakis(1,2-ethenedithiolato-S,S′)diplatinum
$C_8H_8Pt_2S_8$ M 750.8
Black solid. Spar. sol. $CHCl_3$, CS_2, C_6H_6. One-dimensional electrical conductor.

[66906-50-1]

Browall, K.W. *et al, Inorg. Chem.*, 1972, **11**, 1800 (*synth, cryst struct, cond*)

IC-003959

$C_4H_5AuO_4S$

Mercaptobutanedioato(1−)gold, 9CI

Gold thiomalate. [(*1,2-Dicarboxyethyl*)*thio*]*gold. Aurothiomalic acid*

$HOOCCH_2CH(SAu)COOH$

M 346.1

Di-Na salt: [12244-57-4]. *Gold sodium thiomalate. Sodium aurothiomalate. Myochrysine. Myocrisin. Tauredon*
$C_4H_3AuNa_2O_4S$ M 390.0
Antirheumatic drug. Yellowish-white powder. Sol. H_2O, insol. EtOH, Et_2O.
▷ MD5435000.

Merck Index, 9th Ed., 1976, No. 4365.

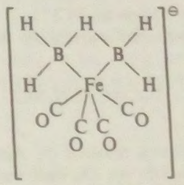
IC-003960

$C_4H_5B_2FeO_4^{\ominus}$

Tetracarbonyl[η²-pentahydrodiborato(1−)]ferrate(1−)



M 194.5 (ion)
Proposed struct. shown.

K salt: [67269-71-0].
Dark brown solid., stable at r.t. for several hours sealed under vacuum. Sol. THF.

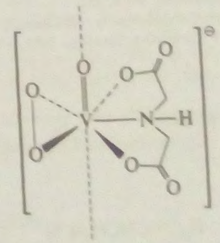
Medford, G.F. *et al, J. Am. Chem. Soc.*, 1978, **100**, 3953 (*synth, ir, pmr, B-11 nmr*)
Medford, G.F., *CA*, 1979, **90**, 80158d (*synth*)

IC-003961

$C_4H_5NO_7V^{\ominus}$

(Iminodiacetato)oxoperoxyvanadate(*V*)(1−)

[N-(*Carboxymethyl*)*glycinato*(2−)-N,O,O^{N}]*oxoperoxyvanadate*(V)(*1*−), *11CI*



M 230.0 (ion)
Pentagonal bipyramidal with the oxo and one carboxyl oxygen of a neighbouring unit in axial positions. The bridging between units is weak; V=O 237.5 pm. Has been tested for anti-tumour activity and proposed as a model for V sites in biochemical spp.

NH_4 salt: [95533-37-2].
$C_4H_8N_2O_7V$ M 248.0

Synth. from NH_4VO_3, imidodiacetic acid and H_2O_2 in aq. soln. Sol. H_2O.
K salt: [95533-36-1]
Synth. analogous to that of NH_4 salt. Sol. H_2O.
[95533-38-3]
Djordjevic, C. *et al, Inorg. Chem.*, 1985, **24**, 1281 (*synth, cryst struct*)
Djordjevic, C. *et al, J. Inorg. Biochem.*, 1985, **25**, 51 (*pharmacol*)

$C_4H_5NO_8Ru^{2\ominus}$ IC-003962

Hydroxybis[hydroxyacetato(2−)-O^1,O^2]nitrosylruthenate(2−)
Bis(glycolato)hydroxy(nitrosyl)ruthenate(2−)

$[Ru(NO)(OH)(OCH_2CO_2)_2]^{2\ominus}$

M 296.1 (ion)
pseudo-Octahedral; isomeric form unknown. Prepd. by treating $Ru(NO)Cl_3(OH_2)_2$ with $HOCH_2COOH$. Sol. H_2O.
Di-K salt: [72466-56-9].
Characterised spectroscopically. Ir ν_{NO} 1865 cm^{-1}.
Ishiyama, T. *et al, Annu. Rep. Radiat. Centre Osaka Prefect.*, 1978, **19**, 1 (*synth*)

C_4H_5NS IC-003963

3-Isothiocyanato-1-propene, 9CI
Allyl isothiocyanate. Allyl mustard oil. Mustard oil
[57-06-7]

$H_2C{=}CHCH_2NCS$

M 99.1
Chief constit. of natural mustard oil. Also found in cooked cabbage, horseradish, etc. Oil with very pungent, irritating odour. Sol. EtOH, Et_2O, C_6H_6, sl. sol. H_2O. d_4^{15} 1.015. Fp −80°. Bp 151°, Bp_{12} 44°.
▷ Highly toxic, mutagen. Autoclave reacns. between NaSCN and $H_2C{=}CHCH_2Cl$ may explode. NX8225000.

$C_4H_6CaO_4$ IC-003972

Calcium acetate
Acetic acid, calcium salt, 8CI. Ethanoic acid, calcium salt
[62-54-4]

$Ca(OAc)_2$

M 158.1
Synth. by reaction of Ac_2O with anhydrous solid $Ca(NO_3)_2$. Generation by dehydration of the dihydrate is difficult, mixtures of $Ca(OAc)_2$ with AcOH and $CaCO_3$ (or CaO) being produced. Component of lubrication greases; crosslinking agent for acrylic adhesives. Additive for polyester fibres to improve dyeability and drape; and to poly(ethylene terephthalate) films to improve friction props. Widely used as a catalyst, particularly for gasification processes. Commercially available as hydrate. Hygroscopic white powder. V. sol. H_2O (37 g per 100 cm^3 at 0°; 30 g per 100 cm^3 at 100°); spar. sol. EtOH. ΔH_f° −1479 kJ mol^{-1}. Hygroscopic. Dec. on heating to form CaO.
▷ AF7525000.
Monohydrate: [5743-26-0].
$C_4H_8CaO_5$ M 176.1
Cryst. from aq. $Ca(OAc)_2$ >84°. Colourless cryst. Dec. on heating → CaO. V. sol. (44 g per 100 cm^3 at 0°; 34 g per 100 cm^3 at 100°); spar. sol. EtOH. ΔH_f° −1772 kJ mol^{-1}.
▷ AF7875000.
Dihydrate.
$C_4H_{10}CaO_6$ M 194.1
Synth. by treatment of $Ca(OH)_2$ with Ac_2O or by neutralisation of $CaCO_3$ with glacial AcOH. Cryst. from aq. soln. of $Ca(OAc)_2$ <84°. Colourless cryst. Dec. on heating with H_2O loss (−H_2O at 84°) and ultimate formation of CaO. V. sol. H_2O (35 g per 100 cm^3 at 20°; 34 g per 100 cm^3 at 80°); spar. sol. EtOH.

$C_4H_6CdO_4$ IC-003973

Cadmium acetate
[543-90-8]

$Cd(OAc)_2$

M 230.5
Obt. from dihydrate at 130° *in vacuo*; or from $CdCO_3$ in AcOH. Polym. catalyst. Cryst.; dimorphic, α→β at 225°. Mp 255°. Dec. at 262° to $Cd_4O(OAc)_6$.
▷ EU9810000.

Dihydrate: [5743-04-4].
Cryst. Struct. comprises 7-coord. Cd (CdO_7) in a distorted square base trigonal capped environment; both AcO⁻ are bidentate with O of one also bridging Cd. Loses H_2O at 80° and 130°.
▷ AF730:5000.

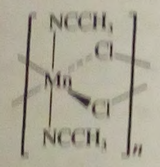
$C_4H_6Cl_2MnN_2$ IC-003978

Bis(acetonitrile)dichloromanganese(*II*)
Dichlorobis(methyl cyanide)manganese(II). *Manganese*(II) *chloride bis(acetonitrile)*

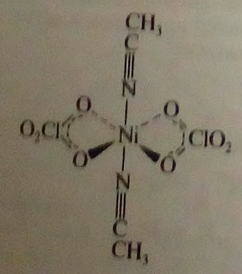


M 207.9
Octahedral Mn in polymeric chain struct. Synth. by treating a suspension of Mn in MeCN with Cl_2. Pink solid. μ_{eff} = 5.83μ_B. Bromide compd. also known.

Hathaway, B.J. *et al*, *J. Chem. Soc.*, 1964, 2400 (*synth, ir, uv, magnetism*)
Gmelin Handbook Inorg. Chem., Syst. No. 56, 1990, **D7**, 10 (*rev, bibl*)

$C_4H_6Cl_2N_2NiO_8$ IC-003979

Bis(acetonitrile)diperchloratonickel(*II*) 8Cl
Bis(perchlorato-O,O′)bis(acetonitrile)nickel(II). *Diperchloratobis(acetonitrile)nickel*(II). *Nickel*(II) *perchlorate bis(acetonitrile)*
[14836-72-7]

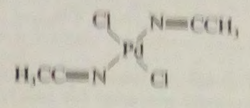


M 339.6
Pseudo-*trans*-octahedral struct. based on ir data. Standard example of bidentate perchlorate. Obtd. by thermal dec. of $Ni(NCMe)_6(ClO_4)_2$ at 75° *in vacuo*. Moisture sensitive green solid.
▷ Potentially explosive.

Wickenden, A.E. *et al*, *Inorg. Chem.*, 1965, **4**, 404 (*synth, ir, uv-vis*)

$C_4H_6Cl_2N_2Pd$ IC-003980

Bis(acetonitrile)dichloropalladium(*II*)
[14592-56-4]



M 259.4
trans-form [21264-30-2]
Widely used as a catalyst in org. synth. Yellow precipitate. Mp > 300°.
[90243-59-7]

Walton, R.A., *Spectrochim. Acta*, 1965, **21**, 1795 (*ir*)

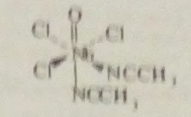
$C_4H_6Cl_3N_2NbO$ IC-003983

Bis(acetonitrile)trichlorooxoniobium(*V*), 9Cl
Oxotrichlorobis(methyl cyanide)niobium(V)
[56349-60-1]



M 297.3
Distorted octahedron. ONbCl angles vary between 97 and 101°. Synth. by recrystallising $NbOCl_3$ from dry MeCN. Cryst.

Chavant, C. *et al*, *Acta Crystallogr., Sect. B*, 1975, **31**, 1828 (*synth, cryst struct*)

$C_4H_6Cl_3N_2NbS$ IC-003984

Bis(acetonitrile)trichlorothioxoniobium(*V*), 1Cl
Bis(acetonitrile)trichlorosulfidoniobium(V)
[63510-32-7]

$NbCl_3S(NCCH_3)_2$

M 313.4
Presumed octahedral at Nb. Synth. by refluxing $NbCl_3S$ in MeCN. Green solid. Sol. MeCN. Ir $\nu_{Nb=S}$ 528 cm^{-1}.

Baghlaf, A.O. *et al*, *J. Less-Common Met.*, 1977, **53**, 291 (*synth, ir*)
bin-Baba, I., *Sains Malays.*, 1983, **12**, 249 (*synth, ir, uv-vis*)

$C_4H_6Cl_3N_2NbSe$ IC-003985

Bis(acetonitrile)trichlorooxoseleniobium(*V*), 1Cl
Bis(acetonitrile)trichlorooxoselenidoniobium(V). *Niobium*(V) *trichloride selenide bis(acetonitrile)*
[92205-08-8]

$NbCl_3Se(NCCH_3)_2$

M 360.3
Presumed octahedral. Synth. by refluxing $NbCl_3Se$ in excess MeCN. Dark brown solid. Sol. MeCN.

bin-Baba, I., *Sains Malays.*, 1983, **12**, 249 (*synth, ir, uv-vis*)

$C_4H_6Cl_3N_2OV$ IC-003986

Bis(acetonitrile)trichlorooxovanadium(*V*), 1Cl
[33519-55-0]

$VOCl_3(NCCH_3)_2$

M 255.4
According to Brunette *et al* the bis-MeCN adduct is formed in CCl_4 soln. based on spectroscopic evidence, but only $VOCl_3.MeCN$ could be isol. Synth. from $VOCl_3$ and MeCN in CCl_4. Black solid.

Funk, H. *et al*, *Z. Anorg. Allg. Chem.*, 1958, **296**, 36 (*synth*)
Brunette, J.P. *et al*, *Compt. Rend. Hebd. Seances Acad. Sci. Sect. C*, 1971, **272**, 2147 (*synth in soln, uv-vis*)

$C_4H_6Cl_3N_3ORu$ IC-003987

Trichlorobis(acetonitrile)(nitrosyl)ruthenium, 8Cl
Trichlorobis(methyl cyanide)(nitrosyl)ruthenium. Trichlorobis(ethanenitrile)(nitrosyl)ruthenium
[15281-56-8]

$Ru(NO)Cl_3(NCCH_3)_2$

M 319.5
Isomeric form not established; presumably similar to Trichlorobis(methyldiphenylphosphine)(nitrosyl) ruthenium, IC-011883. Red solid. Mp > 320° dec. Ir ν_{NO} 1904 cm^{-1}.

Parry, M.B. *et al*, *J. Chem. Soc. A*, 1966, 475 (*synth, ir*)

IC-003988

$C_4H_6Cl_4CrN_2^{\ominus}$

Bis(acetonitrile)tetrachlorochromate(*III*)(1 −), 10Cl

$[CrCl_4(NCCH_3)_2]^{\ominus}$

M 275.9 (ion)

cis-form
Obt. from Bis(acetic acid)tetrachlorochromate(*III*)(1 −), IC-004067 + MeCN.

Et_4N salt: [86862-39-3]
Purple solid.

Quinolinium salt: [86862-37-1]
Purple solid + MeCN. Ir ν_{max} 3322, 2292, 2247; $\nu_{C\equiv C}$ 340 cm^{-1}.

Seddon, K.R. *et al*, *J. Chem. Soc., Dalton Trans.*, 1977, 2193 (*synth, ir, uv-vis, struct*)

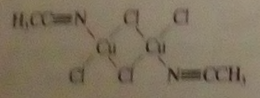
IC-003989

$C_4H_6Cl_6Cu_2N_2$

Bis(acetonitrile)di-μ-chlorodichlorodicopper(*II*), 8Cl

Tetrachlorobis(acetonitrile)dicopper. Copper(II) *chloride acetonitrile*

[17368-07-9]



M 351.0
V. hygroscopic yellow needles. Dec. at 325° to $(CuCl_2)_2(CH_3CN)_2$.

Willett, R.D. *et al*, *J. Chem. Phys.*, 1964, **40**, 838 (*synth, cryst struct*)
Willett, R.D., *J. Inorg. Nucl. Chem.*, 1967, **29**, 2482 (*ir*)

IC-003990

$C_4H_6Cl_4HfN_2$

Bis(acetonitrile-*N*)tetrachlorohafnium(*IV*), 11Cl

Tetrachlorobis(acetonitrile)hafnium(IV)

$(MeCN)_2HfCl_4$

M 402.4
Octahedral.

cis-form [65556-77-6]
Synth. by dissolving $HfCl_4$ in dry MeCN or in soln. of MeCN in CCl_4. Also by electrochemical oxidation of Hf in the presence of Cl_2. Solid.

Brisdon, B.J. *et al*, *Spectrochim. Acta, Part A*, 1969, **25**, 999 (*synth, uv-vis, ir*)

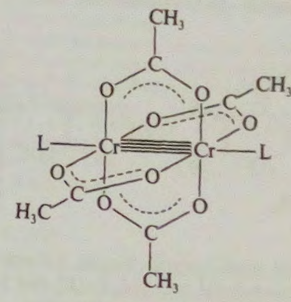
IC-004009

$C_4H_6CrO_4$

Chromium(*II*) acetate

Chromous acetate



dimer, L = donor ligand or O from adjacent molecule

M 170.0

Dimeric, many carboxylato analogues: e.g. R = H, *tert*-Bu, CF_3, Ph, and derivs. known. Strong reducing agent; starting material.

Tetrakis*[*μ-(acetato-O:O')*]*dichromium*(*II*), *11Cl, 10Cl, 9Cl

[15020-15-2]

Dimer
$C_8H_{12}Cr_2O_8$ M 340.1
Cr—Cr 228.8 pm. Obt. by thermal dehydration of hydrate. Prototype for many quadruply bonded Cr_2 compds. Yellow-brown cryst. (by subl.).

▷ Pyrophoric.

Dihydrate: [628-52-4]. *Tetrakis*[*μ-*(*acetato-*O:O')]*diaquadichromium*, *11Cl, 10Cl, 9Cl*
Reducing agent, starting material. Air-sensitive dark red cryst. (H_2O). Stable in air for short period. Spar. sol. H_2O, EtOH; sol. hot H_2O. Loses H_2O at 100°. Cr—Cr, 236.2 Cr—OH_2, 227.2 pm.

▷ AG3000000.

Di-NH_3 complex: [75576-28-2]. *Tetrakis*[*μ-*(*acetato-*O:O')]*diamminedichromium*, *10Cl*
$C_8H_{18}Cr_2N_2O_8$ M 374.2
Reddish purple, air-sensitive solid. $\mu_{eff} = 0.6\mu_B$ (295K), $0.3\ \mu_B$ (90K).

Bis-acetic acid complex: [15225-50-0]. *Tetrakis*[*μ-*(*acetato-*O:O')]*bis*(*acetic acid*)*dichromium*
Red needles (AcOH). Cr—Cr 230.0 pm.

Bis-Py complex: [66197-70-4]. *Tetrakis*[*μ-*(*acetato-*O:O')]*bispyridinedichromium*
$C_{18}H_{22}Cr_2N_2O_8$ M 498.3
Red prisms (aq. Py). Cr—Cr 236.9, Cr—N 233.5 pm.

Bis-piperidine complex:
$C_{18}H_{34}Cr_2N_2O_8$ M 510.4
Red-purple leaflets (piperidine). Cr—Cr 234.2 pm.

Bis(*4-cyanopyridine*) *complex:* Red cryst. (THF/hexane). Cr—Cr 231.5, Cr—N 232.7 pm.

Pyrazine complex: [72186-99-3]. *Tetrakis*[*μ-*(*acetato-*O:O')]*pyrazinedichromium*
Reddish orange cryst. Pyrazine links $Cr_2(OAc)_4$ units in chains. Cr—Cr 229.5, Cr—N 231 pm.

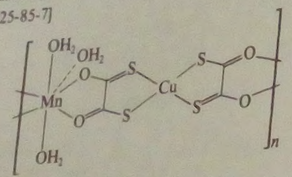
$C_4H_6CuMnO_7S_4$ IC-004010

Triaquabis(μ-dithiooxalato)copper(*II*)manganese(*II*)

Triaqua[(copper)(μ-ethanebis(thioato)(2−)-O,O′:S,S′]][ethanebis(thioato)(2−)-O,O′]manganese, 11Cl

[90025-85-7]



M 412.8

Polymeric struct. with 7-coord. Mn(*II*). Ferromagnetic quasi-one-dimensional material. Cu(*II*) and Mn(*II*) are antiferromagnetically coupled at low temp.

4.5 Hydrate: [89958-80-5].

Synth. from a warm aq. slurry of $K_2Cu(S_2C_2O_2)_2$ with conc. aq. $MnSO_4$. Brown ribbon shaped cryst. (H_2O).

Gleizes, A. *et al, J. Am. Chem. Soc.*, 1984, **106**, 3727 (*synth, cryst struct, magnetism*)

$C_4H_6CuN_4O_6$ IC-004011

Bis(acetonitrile)dinitratocopper(*II*)

Copper(II) *nitrate acetonitrile complex (1:2)*

[14518-16-2]

$Cu(NO_3)_2(NCCH_3)_2$

M 269.6

Each Cu has tetragonal pyramidal coordination with half the nitrate groups bridging, forming infinite chains. MeCN molecules *trans*. Deep blue cryst. (MeCN).

Duffin, B., *Acta Crystallogr., Sect. B*, 1968, **24**, 396 (*synth, cryst struct*)

$C_4H_6F_2O_{10}S_2Zr$ IC-004012

Bis(acetato-*O,O′*)bis(fluorosulfato-*O,O′*)zirconium(*IV*), 11Cl

[81789-59-5]

$Zr(OAc)_2[OS(O)_2F]_2$

M 407.4

The bidentate nature of the ligands is based on ir evidence. Synth. by adding fluorosulfuric acid to $Zr(OAc)_4$ in sulfuryl chloride. White solid. Forms adducts with Py and bipy.

Sing, S. *et al, J. Fluorine Chem.*, 1982, **20**, 107 (*synth, ir, thermal anal*)

$C_4H_6FeGe_2O_4$ IC-004013

Tetracarbonyldigermyliron, 8Cl

As Tetracarbonylbis(trichlorogermyl)iron, IC-003852 with

X = H

M 319.1

cis-form [33248-48-5]

Colourless volatile solid. Mp 71°.

Stobart, S.R., *Inorg. Nucl. Chem. Lett.*, 1971, **7**, 219 (*synth, ir, pmr*)

$C_4H_6FeO_4$ IC-004014

Iron(*II*) acetate

Ferrous acetate. Iron(II) *ethanoate. Ferrous ethanoate. Acetic acid, iron(2+) salt*

[3094-87-9]

$Fe(OAc)_2$

M 173.9

Synth. from $Fe(CO)_5$ + HOAc and Ac_2O in DMF. White or colourless cryst. $\mu_{eff} = 5.19\mu_B$.

▷ AI3850000.

Tetrahydrate: Used for textile dyeing; wood preservative. Green cryst., oxidises in air. Sol. H_2O, EtOH. Dec. on heating.

Gmelin Handbook Inorg. Chem., Syst. No. 59, 1930, **B**, 521 (*rev, bibl*)

$C_4H_6O_5Ti$ IC-004037

Bis(acetato-*O*)oxotitanium(*IV*), 11CI

Titanium(IV) *diacetate oxide*

[62202-80-6]

$TiO(OAc)_2$

M 181.9
Synth. by refluxing $Ti(OEt)_4$ in acetic anhydride; also synth. by refluxing $TiCl_4$ and HOAc. White solid.
Py complex: [104853-96-5].
$C_9H_{11}NO_5Ti$ M 261.0
Synth. from parent compd. + Py. Pale yellow solid.

Alcock, N.W. *et al, J. Chem. Soc., Dalton Trans.*, 1976, 2238 (*synth*)
Kapoor, R. *et al, Indian J. Chem., Sect. A*, 1986, **25**, 271 (*synth, ir, deriv*)

$C_4H_6O_5Zr$ IC-004038

Bis(acetato-*O*)oxozirconium(*IV*), 11CI

Zirconium acetate oxide ($Zr(OAc)_2O$). Zirconium diacetate oxide. Zirconyl acetate

[5153-24-2]

$ZrO(OAc)_2$

M 225.3
Tetrameric. May be synth. from $Zr(OH)_4$ and AcOH. Commercially available. Many uses ranging from catalysis of lactone polym. and CO/H_2 reactions to antifouling compds., pressure-sensitive adhesive tapes, texturing polyester fibres and improving biaxially stretched polyester film, antimicrobial agents for fabric.
Tetramer: Octakis(acetato)tetraoxotetrazirconium(IV)
$C_{16}H_{24}O_{20}Zr_4$ M 901.2

[20645-04-9]

Kirk-Othmer Encycl. Chem. Technol., 3rd Ed., Wiley, N.Y., 1978-1984, **7**, 192; **22**, 793 (*antimicrobial use*)

$C_4H_6O_6U$ IC-004039

Bis(acetato)dioxouranium

Uranyl acetate

$UO_2(OAc)_2$

M 388.1
Exists in 5 cryst. modifications. Widely used to detect and determine Li, Na, K, Mg, Zn and other metals forming insol. uranyl acetate compds. Yellow solid. Can be obt. as dihydrate. Forms complexes with donor ligands e.g. R_3PO, R_3AsO.
Dihydrate: [6159-44-0].
$C_4H_{10}O_8U$ M 424.1
Yellow cryst. (AcOH). Sol. H_2O. 7-Coordinate pentagonal bipyramid struct. with 1 H_2O coordinated to U. Ir $\nu_{U=O}$ 949 cm^{-1}. Dehydrates above 80° with slight dec.

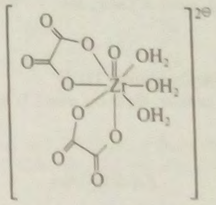
$C_4H_6O_{12}Zr^{2\ominus}$ IC-004041

Triaquabis(oxalato)oxozirconate(*IV*)(2−)

Triaquabis[ethanedioato(2−)-O,O']oxozirconate(IV)(*2−*), *11CI*



M 337.3 (ion)
Geometry not detd.
Ca salt, monohydrate: [97665-29-7].
Synth. from aq. soln. of $CaCl_2$, $ZrOCl_2$ and oxalic acid at pH 1.8-2.0.

Murasé, I., *Ann. Chim. (Paris)*, 1985, **10**, 37 (*synth, thermal dec*)

$C_4H_6S_4Zn$ IC-004042

Bis(dithioacetato)zinc(*II*)

Bis[ethane(dithioato)-S,S']zinc(II), *9CI*

[51637-41-3]

$(H_3CCSS)_2Zn$

M 247.7
Yellow solid (C_6H_6).

Furlani, C. *et al, J. Chem. Soc., Dalton Trans.*, 1973, 2404 (*synth, uv*)

$C_4H_7AlO_5$ IC-004043

Aluminium acetate hydroxide ($Al(OAc)_2OH$)

Aluminium hydroxide bis(ethanoate). Bis(acetato-O) hydroxyaluminium

[142-03-0]

$AlOH(OAc)_2$

M 162.0

Synth. from NaOAc and $AlCl_3.6H_2O$ or from $NaAlO_2$ + HOAc. Antiseptic; deodorant; mordant. White solid (H_2O).

Hood, G.C. *et al, J. Am. Chem. Soc.*, 1950, **72**, 2094 (*synth*)

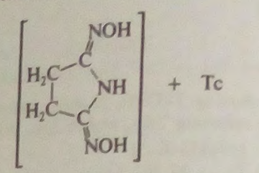
IC-004048

$[C_4H_7N_3O_2Tc]$

2,5-Pyrrolidinedionedioxime technetium complex

Succinimidedioxime technetium complex



Incomplete formula given; ill-defined cationic complex. Produced by $SnCl_2$ redn. of $TcO_4^{\ominus}$ + ligand; oxidn. state probably Tc^{III}. Yellow.

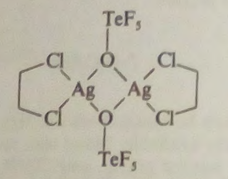
Grases, F. *et al, Radiochim. Acta*, 1986, **40**, 103 (*synth, props*)

IC-004049

$C_4H_8Ag_2Cl_4F_{10}O_2Te_2$

Bis(1,2-dichloroethane-*Cl,Cl'*)bis[μ-[pentafluorohydroxytellurato(1−)-*O*:*O*]]disilver(*I*)

[116887-69-5]



M 890.8
V. moisture-sensitive efflorescent cryst. See also [Pentafluorohydroxytellurato(1−)]silver, IC-000032.

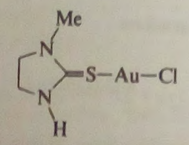
Colsman, M.R. *et al, J. Am. Chem. Soc.*, 1988, **110**, 6886 (*cryst struct, synth, ir, raman, uv*)

IC-004050

$C_4H_8AuClN_2S$

Chloro(1-methyl-2-imidazolidinethione-*S*)gold(*I*), 11CI

[100011-77-6]



M 348.6
Colourless powder (MeOH). Mp 186-187°.

Isab, A.A. *et al, Polyhedron*, 1985, **4**, 1683 (*synth*)

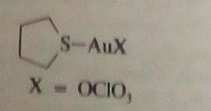
IC-004051

$C_4H_8AuClO_4S$

(Perchlorato-*O*)(tetrahydrothiophene)gold(*I*), 11CI

(Tetrahydrothiophene)gold(1) *perchlorate*

[80330-69-4]



M 384.5
Synth. from $AuCl(SC_4H_8)$ and $AgClO_4$ at −20°. Useful reagent for synth. of organometallic gold(*I*) complexes. Sol. CH_2Cl_2, Et_2O.

▷ Potentially explosive.

Usón, R. *et al, J. Organomet. Chem.*, 1981, **218**, 265 (*synth, reactions*)

C_4H_8AuClS

Chloro(tetrahydrothiophene)gold(*I*)

[39929-21-0]

As (Perchlorato-*O*)(tetrahydrothiophene)gold(*I*), IC-004051 with

X = Cl

M 320.5
Possesses antiarthritic activity. V. useful intermed. for synth. of co-ordination compounds and organometallics. Colourless cryst. (EtOH). Thermally unstable. Mp 109° dec.

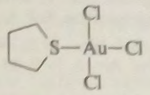
Allen, E.A. *et al, Spectrochim. Acta, Part A*, 1972, **28**, 2257 (*ir, raman*)
Usón, R. *et al, J. Organomet. Chem.*, 1977, **131**, 471 (*synth*)
U.S. Pat., 4 112 113, (1977); 1979, **90**, 127542s (*synth, antiarthritic activity*)

IC-004053

$C_4H_8AuCl_3S$

Trichloro(tetrahydrothiophene)gold(*III*)

[29991-21-7]



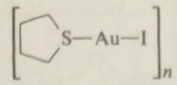
M 391.4
V. useful intermed. for forming Au(*III*) complexes.

Ray, P.C. *et al, J. Indian Chem. Soc.*, 1930, **1**, 67 (*synth*)
Allen, E.A. *et al, Spectrochim. Acta, Part A*, 1972, **28**, 2257 (*synth, ir, raman*)
Usón, R. *et al, Inorg. Chim. Acta*, 1981, **52**, 29 (*reactions*)

IC-004054

C_4H_8AuIS

Iodo(tetrahydrothiophene)gold(*I*)



M 412.0
Exists as dimeric polymer consisting of zig-zag infinite chain of AuI_2 and $Au(SC_4H_8)_2$ linear fragments linked by short Au—Au contacts of 297-298 pm.

Dimer: [95344-34-6]. *Diiodobis(tetrahydrothiophene)digold homopolymer, 11CI*
$C_8H_{16}Au_2I_2S_2$ M 824.0
Light yellow prismatic cryst.

Ahrland, S. *et al, Inorg. Chem.*, 1985, **24**, 1330 (*synth, cryst struct*)

IC-004055

$C_4H_8AuNO_2S$

(Methyl-L-cysteinato-*N,S*)gold, 11CI

[93095-16-0]

$[AuSCH_2CH(NH_2)COOMe]_n$

M 331.1
Polymeric. Colourless cryst. Insol. all common solvs.

Ambach, E. *et al, Z. Naturforsch., B*, 1984, **39**, 1129 (*synth*)

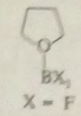
IC-004056

$C_4H_8BF_3O$

Trifluoro(tetrahydrofuran)boron, 10CI

Tetrahydrofuran compd. with trifluoroborane (1:1), 9CI. Tetrahydrofuran compd. with boron fluoride (BF_3) (1:1), 8CI. Trifluoroborane tetrahydrofuran

[462-34-0]



M 139.9
Catalyst. Moisture-sensitive white solid or colourless liq. Mp 12°.

McLaughlin, D.E. *et al, J. Am. Chem. Soc.*, 1960, **82**, 5621 (*pmr*)
Begun, G.M. *et al, J. Chem. Phys.*, 1963, **38**, 2112 (*raman, ir*)

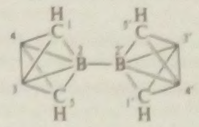
Krysin, A.P. *et al, Izv. Sib. Otd. Akad. Nauk SSSR, Ser. Khim. Nauk*, 1977, 151.
Hui, B.C., *Inorg. Chem.*, 1980, **19**, 3185 (*use*)
Grinevich, T.V. *et al, Vysokomol. Soedin., Ser. A*, 1980, **22**, 1576 (*use*)

IC-004057

$C_4H_8B_6$

2,2'-Bi-1,5-dicarbapentaborane(5)

[60569-26-8]



M 120.9
Synth. by polym. of 1,5-$C_2B_3H_5$ or from $PtBr_2$ + 1,5-$C_2B_3H_5$ at r.t. Colourless liq. (by dist.). Sol. hexane. V.p. 6 mm at 0°.

Burg, A.P. *et al, Inorg. Chem.*, 1972, **11**, 1962 (*synth*)
Fehlner, T.P. *et al, J. Am. Chem. Soc.*, 1980, **102**, 2644 (*synth, B-11 nmr, pmr, ms, ir, raman*)
Sneddon, L.G. *et al, J. Am. Chem. Soc.*, 1984, **106**, 2275, 7793 (*synth, B-11 nmr, pmr, ir, ms*)

IC-004058

$C_4H_8Br_4CrO_4^{2\ominus}$

Bis(acetic acid)tetrabromochromate(*II*)(2−)

$[CrBr_4(HOAc)_2]^{2\ominus}$

M 491.7 (ion)
Distorted octahedral anion. Apparently incorrectly indexed in 11CI.

trans-form
Interatomic distances: Cr—Br 263.7, 283.9; Cr—O 206 pm.

Bis-guanidinium salt: [77135-55-8].
Synth. from guanidinium bromide + $CrBr_3$ in AcOH. Air-sensitive light green cryst. (AcOH). High spin complex.

[87196-97-2]

Babar, M.A. *et al, J. Chem. Soc., Dalton Trans.*, 1981, 27 (*synth, magnetism, uv*)
Babar, M.A. *et al, J. Crystallogr. Spectrosc. Res.*, 1983, **13**, 325 (*cryst struct*)

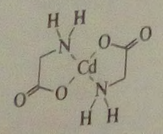
IC-004059

$C_4H_8CdN_2O_4$

Bis(glycinato-*N,O*)cadmium

Cadmium glycinate

[14376-36-4]



M 260.5

Prepd. from CdO + glycine in H_2O. Cryst. + $1H_2O$ (H_2O).

Low, B.W. *et al, J. Am. Chem. Soc.*, 1959, **81**, 4412 (*synth, cryst struct*)
Krishnan, K. *et al, Inorg. Chem.*, 1967, **6**, 55 (*raman*)

IC-004065

$C_4H_8Cl_2MnO_2$

Dichloro(1,4-dioxane)manganese(*II*), 9Cl

Manganese(II) *chloride 1,4-dioxane*

[26613-91-2]

$MnCl_2$(dioxan)

M 213.9

Polymeric layer struct. with octahedral Mn surrounded by 4Cl (equatorial) and 2O (axial). Prepd. from dioxane and $MnCl_2$. Colourless cryst., not hygroscopic. V. sol. H_2O, EtOH. $\mu_{eff} = 5.88\mu_B$ (292K).

Dihydrate:

$C_4H_{12}Cl_2MnO_4$ M 249.9

Prepd. from $MnCl_2.4H_2O$ in EtOH and dioxane. Bright pink cryst.

Osthoff, R.C. *et al, J. Am. Chem. Soc.*, 1954, **76**, 4732 (*synth*)

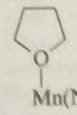
$C_4H_8MnN_3O_4$

Trinitrosyl(tetrahydrofuran)manganese, 11Cl

[56315-56-1]



M 217.0

Synth. by photolysis of a THF soln. of $Mn_2(CO)_{10}$ saturated with NO. Useful intermed. for the synth. of the complexes $Mn(NO)_3L$ (L = PR_3, AsR_3, 1,2-di-2-pyridylethylene). Almost opaque olive green soln. in THF which can be stored for at least 2 months at −10° under N_2.

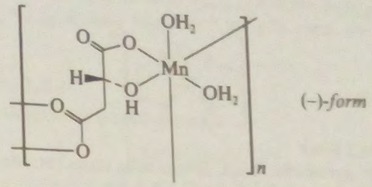
Herberhold, M. *et al, J. Organomet. Chem.*, 1974, **67**, 81 (*synth, ir*)
Wilson, R.D. *et al, J. Organomet. Chem.*, 1980, **191**, 123 (*synth, ir*)

IC-004080

$C_4H_8MnO_7$

Diaquabis[hydroxybutanedioato(1−)]manganese(*II*)

Diaqua(malato)manganese(II)



(−)-*form*

M 223.0

Polymeric chain struct. with octahedral Mn.

(−)-*form* [56994-99-1]

Synth. from $MnCO_3$ and *S*-malic acid in H_2O. Colourless cryst. (H_2O).

Karipides, A. *et al, Inorg. Chem.*, 1976, **15**, 44 (*synth, cryst struct*)

IC-004081

$C_4H_8MnO_8$

Diaqua[2,3-dihydroxybutanedioato(2−)-O^1,O^2] manganese(*II*), 11Cl

Diaqua(μ-+L-tartrato)manganese(II)

[13001-56-4]

$Mn(OH_2)_2(OOCCHOHCHOHCOO)$

M 239.0

Polymeric struct. with v. distorted octahedral Mn (as dihydrate). Synth. from $MnCl_2$ or $MnSO_4$ with $K_2C_4H_4O_6$ in H_2O. Pink cryst.

Dihydrate: [102532-45-6].

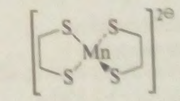
Synth. by slow evaporation of an aq. soln. of tartaric acid and $MnCl_2$ at r.t. Blue-green prisms.

Gmelin Handbook Inorg. Chem., Syst. No. 56, 1980, D2, 170 (*rev, bibl*)
Soylu, H., *Z. Kristallogr., Kristallogeom., Kristallphys., Kristallchem.*, 1985, **171**, 255 (*synth, cryst struct*)

IC-004082

$C_4H_8MnS_4^{2\ominus}$

Bis(1,2-ethanedithiolato)manganate(*II*)(2−)



M 239.3 (ion)

Tetrahedral anion, Mn—S 243 pm (mean). Yellow-green anion (MeCN). μ_{eff} = 5.06μ_B (MeCN).

Bis-Me_4N salt: [87860-05-7].

Synth. from $MnCl_2$ and $NaSCH_2CH_2SNa$ in MeOH and stoichiometric amounts of $[Me_4N]Cl$ under N_2. Yellow cryst. + $\frac{1}{2}$MeCN (MeCN). Insol. Et_2O.

Bis-Ph_4P salt: [87860-06-8].

Synth. from $MnCl_2$, $NaSCH_2CH_2SNa$, $[Ph_4P]Cl$ in MeOH under N_2. Orange-yellow cryst. μ_{eff} = 6.02μ_B (298K).

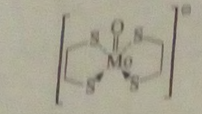
Costa, T. *et al, Inorg. Chem.*, 1983, **22**, 4091 (*synth, cryst struct, magnetism, uv*)
Gmelin Handbook Inorg. Chem., Syst. No. 56, 1980, D7, 38 (*rev, bibl*)

IC-004083

$C_4H_8MoOS_3^{\ominus}$

Bis(ethane-1,2-dithiolato-*S,S'*)oxomolybdate(*IV*)

Bis[1,2-ethanedithiolato(2−)-S,S']oxomolybdate(V) (1−),11Cl



M 296.3 (ion)
Square pyramidal struct. Interatomic distances: Mo=O 167.8, Mo—S 237.2, S—C 176.0 pm.

Ph_4P salt: [106708-03-6].
Black cryst. (CH_2Cl_2/Et_2O).

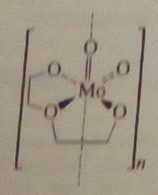
Ellis, S.R. *et al, J. Chem. Soc., Chem. Commun.*, 1986, 1483 (*cryst struct, synth, esr*)

IC-004084

$C_4H_8MoO_5$

Dioxo[2,2'-oxybis[ethanolato]](2−)-*O,O',O'']molybdenum(*VI*), 11Cl

[73440-38-7]



M 232.0

cis-form [85047-93-4]
Octahedral, with asymmetric Mo—O bridge forming polymeric chain struct. Synth. from MoO_3 and ligand. Cryst.

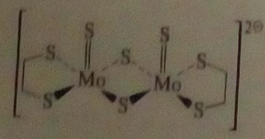
Knobler, C. *et al, J. Chem. Soc., Dalton Trans.*, 1980, 248 (*synth, ir*)
Wilson, A.J. *et al, Acta Crystallogr., Sect. C*, 1983, **39**, 329 (*synth, cryst struct*)

IC-004085

$C_4H_8Mo_2S_8^{2\ominus}$

Bis(ethylene-1,2-dithiolato)di-μ-sulfidodisulfidodimolybdate(2−)

Di-μ-sulfidobis[(ethylene-1,2-dithiolato)sulfidomolybdate(V)]
Bis[1,2-ethanedithiolato(2−)-S,S']di-μ-thioxodithioxodimolybdate(2−), 11Cl, 10Cl. (*Ethane-1,2-dithiolato-S,S')bis(μ-sulfido)disulfidodimolybdate(V)(2−)*
[64582-89-4]



syn-form

M 504.5 (ion)
Tetragonal-pyramidal molybdenum. First example of *syn* and *anti* isomerism in di-μ-sulfido-bridged Mo^V complex.

syn-form [65137-00-0]
cis-form
Non-planar Mo_2S_4 core.

Bis-Et_3NH salt: [96647-87-9].
Dark brown cryst. Mo—Mo 285.5 pm.

Bis-Et_4N salt: [65137-01-1].
Red-violet prisms. Sol. MeCN. Diamagnetic; Mo—Mo 286.3 pm.

anti-form [65045-65-0]
trans-form
Planar Mo_2S_2 core.

Bis-Et_4N salt: [65045-66-1].
Red-violet rhombohedral plates. Sol. MeCN. Diamagnetic; Mo—Mo 287.8 pm.

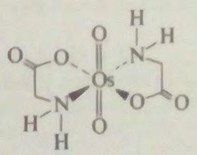
IC-004091

$C_4H_8N_2O_6Os$

Bis(glycinato)dioxoosmium(*VI*)

[77153-90-3]



M 370.3
All *trans*-octahedral. Synth. from OsO_4 and glycine in H_2O, crysts. form v. slowly. Brightly coloured needles. Dec. in common solvs. Ir $\nu_{Os=O}$ 850 cm^{-1}.

Roth, W.J. *et al, Inorg. Chem.*, 1981, **20**, 2023 (*synth, cryst struct, ir*)

IC-004092

$C_4H_8N_4O_4Zn^{2\ominus}$

Tetrakis(formamidato)zincate(2−)

$$[Zn(NHC(O)H)_4]^{2\ominus}$$

M 241.5 (ion)
Di-Na salt: [30927-58-3].
Synth. *in situ*, not isol. Sol. formamide.
Di-K salt: [30927-59-4].
Synth. *in situ*, not isol. Sol. formamide.

Paul, R.C. *et al, Indian J. Chem.*, 1970, **8**, 939 (*synth, props*)

IC-004093

$C_4H_8N_6NiS_4$

Bis(thiocyanato-*S*)bis(thiourea-*S*)nickel, 10Cl

Dithiocyanatobis(thiourea)nickel(II)

[28604-23-1]

$$(NCS)_2Ni[S{=}C(NH_2)_2]_2$$

M 327.1
6-Coordinate Ni, bound to two NCS via N, and four S in polymeric struct. Green prismatic cryst. (amyl alcohol). Sol. EtOH; sl. sol. Py (with dec.). Mp 225°. μ_{eff} = 2.87 μ_B.

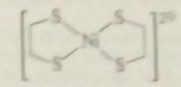
IC-004094

$C_4H_8NiS_4^{2\ominus}$

Bis(1,2-ethanedithiolato-*S,S'*)nickelate(*II*)(2−)



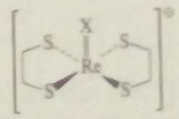
M 243.0 (ion)
Formed from $NiCl_2$ and 1,2-ethanedithiol. Formed in soln. Not isol.

Leussing, D.L. *et al, J. Am. Chem. Soc.*, 1960, **82**, 4458.

IC-004095

$C_4H_8OReS_4^{\ominus}$

Bis(1,2-ethanedithiolato-*S,S'*)oxorhenate(*V*)(1−), 10Cl



X = O

M 386.5 (ion)
Square pyramidal, Re—S 231, Re=O 174.2 pm.

Ph_4P salt: [84825-84-3].
Synth. from K_2ReCl_5 or $ReOCl_3(PPh_3)_2$ and $HSCH_2CH_2SH$ in MeOH in presence of Et_3N, followed by addition of Ph_4PCl. Brown cryst.

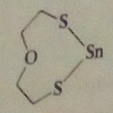
Davison, A. *et al, Inorg. Chem.*, 1980, **19**, 1988 (*synth, props*)
Blower, P.J. *et al, J. Chem. Soc., Dalton Trans.*, 1986, 1339 (*synth, ir, pmr, cryst struct*)

$C_4H_8OS_2Sn$ IC-004096

(3-Oxapentane-1,5-dithiolato)tin

[[2,2'-Oxybis(ethanethiolato)](2−)-O,S,S']tin, 11CI

[88055-90-7]



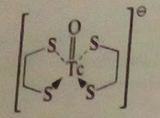
M 254.9

Pale yellow cryst. Sol. toluene. Mp 165° dec.

Tzschach, A. *et al, Z. Anorg. Allg. Chem.*, 1983, **502**, 158 (*synth*)

$C_4H_8OS_4Tc^{\ominus}$ IC-004097

Bis[1,2-ethanedithiolato(2−)-*S,S'*]oxotechnetate(*V*)(1−), 11CI, 10CI



M 299.2 (ion)

Square pyramidal anion. 1,3- and 2,3-dimercaptopropanol give analogous complexes. Synth. from $TcO_4^{\ominus}$ by $BH_4^{\ominus}$ or $S_2O_4^{2\ominus}$ redn. in presence of ligand, or from $TcOCl_4^{\ominus}$ or TcO(gluconate)$_2$ by ligand exchange. Binuclear intermediate isolated in synthesis from $TcOCl_4^{\ominus}$.

Et_4N salt: [75045-59-9].

Orange-red solid (MeOH). Mp 180-183°. Ir $\nu_{Tc=O}$ 935 cm^{-1} (KBr). Weakly paramagnetic in solid state. μ_{eff} is field strength dependent.

Ph_4As salt: [70177-06-9].

Bright orange-red cryst. (MeOH or aq. Me_2CO). Sol. Me_2CO, $CHCl_3$, MeCN; spar. sol. MeOH, EtOH; insol. H_2O, Et_2O. Mp 233-235°.

[69216-12-2]

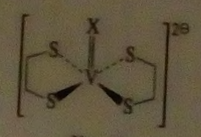
$C_4H_8OS_4V^{2\ominus}$ IC-004098

Bis[1,2-ethanedithiolato(2−)-*S,S'*]oxovanadate(*IV*)(2−), 11CI



X = O

M 251.3 (ion)

Square pyramidal. Various analogues are known. See also Bis[1,2-ethanedithiolato(2−)-*S,S'*]thioxovanadate(*IV*)(2−), IC-004106.

Na, Me_4N salt: [89061-84-7].

Synth. like the Na, Ph_4P salt, using $[Me_4N]Cl$. Green solid + 2EtOH (DMF/MeCN).

Na, Ph_4P salt: [97689-51-5].

Synth. from $VO(acac)_2$ and $NaSCH_2CH_2SNa$ in EtOH and adding $[Ph_4P]Br$. Green solid + 2EtOH (EtOH/Et_2O).

Di-Na salt, octa-MeOH complex: [92315-39-4]. μ_3-*Oxobis(ethane-1,2-dithiolato)vanadium*(IV)*bis*(μ-*methanol*) *hexamethanoldisodium*

$C_{12}H_{40}Na_2O_9S_4V$ M 553.6

Synth. from Na_3VS_4 with the thiol in MeOH. Green cryst. Two Na ions are bound to oxygen of V=O, but struct. of VOS_4 unit essentially similar to that in other salts.

Wiggins, R.W. *et al, J. Chem. Soc., Chem. Commun.*, 1983, 1313 (*synth, cryst struct, mixed salt*)

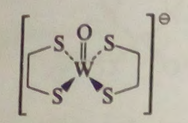
$C_4H_8OS_4W^{\ominus}$ IC-004099

Bis[1,2-ethanedithiolato(2−)-*S,S'*]oxotungstate(*V*)(1−), 11CI



M 384.2 (ion)

Isomorphous with Mo analogue; W—O 164.1, W—S 236.3pm.

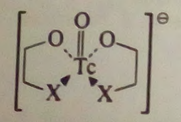
Ph_4P salt: [106608-70-2].

Obt. by thiol exchange between $[WO(SPh)_4]^{\ominus}$ and $HSCH_2CH_2SH$. Black cryst. (CH_2Cl_2/Et_2O).

Ellis, S.R. *et al, J. Chem. Soc., Chem. Commun.*, 1986, 1483 (*synth, cryst struct, esr*)

$C_4H_8O_3S_2Tc^{\ominus}$ IC-004100

Bis[2-mercaptoethanolato(2−)-*O,S*]oxotechnetate(*V*)(1−), 11CI



X = S

M 267.1 (ion)

Square-pyramidal anion. Can be reduced to Tc(*IV*) species. Synth. by dithionite redn. of $TcO_4^{\ominus}$ in presence of 2-mercaptoethanol.

Ph_4As salt: [86119-94-0].

Pink solid (Et_2O/MeCN). Sol. EtOH, MeCN; insol. Et_2O.

Jones, A.G. *et al, Inorg. Chem.*, 1981, **20**, 1617 (*synth, cryst struct*)

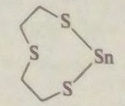
[[2,2'-Thiobis(ethanethiolato)](2−)-S,S',S"]tin, 11CI

[53189-29-0]



M 271.0

Pale yellow cryst. Sol. toluene. Dec. at 144°.

Tzschach, A. *et al, Z. Anorg. Allg. Chem.*, 1983, **502**, 158 (*synth*)

$C_4H_8S_5V^{2\ominus}$ IC-004106

Bis[1,2-ethanedithiolato(2−)-*S,S'*]thioxovanadate(*IV*)(2−), 11CI

Thiobis(ethane-1,2-dithiolato)vanadate(IV)(*2−*)

As Bis[1,2-ethanedithiolato(2−)-*S,S'*]oxovanadate(*IV*)(2−), IC-004098 with

X = S

M 267.3 (ion)

Square pyramidal.

Na, Ph_4P salt: [97689-53-7].

Synth. from Bis[1,2-ethanedithiolato(2−)-*S,S'*]oxovanadate(*IV*)(2−), IC-004098 with $(Me_3Si)_2S$ in MeCN. Brown cryst. + variable Et_2O ($MeCN/Et_2O$).

Bis-Ph_4P salt: [92315-37-2].

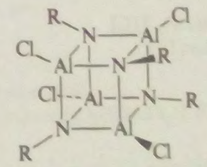
Cryst. + 1MeOH.

Szeymies, D. *et al, Angew. Chem.*, 1984, **96**, 797 (*synth, cryst struct*)
Money, J.K. *et al, Inorg. Chem.*, 1985, **24**, 3297 (*synth, cryst struct, ir*)

C_4H_9AlClN IC-004107

(*tert*-Butylimido)chloroaluminium

Chloro[2-methyl-2-propanaminato(2−)]aluminium. tert-*Butyliminochloroalane*



tetramer

R = $C(CH_3)_3$

M 133.5

Tetrameric. Bromo deriv. also descr.

Tetramer: [59236-77-0]. *Tetrachlorotetrakis[μ_3-[2-methyl-2-propanaminato(2−)]]tetraaluminium*

$C_{16}H_{36}Al_4Cl_4N_4$ M 534.2

Obt. by thermal dec. of ($^tBuNHAlHCl$)$_2$. White moisture-sensitive cryst. (by subl.). Mp 270°. Subl.$_{0.001}$ 150°.

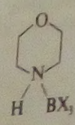
Nöth, H. *et al, Z. Naturforsch., B*, 1976, **31**, 697, 1201 (*synth, pmr, Al-27 nmr, ms*)

$C_4H_9BF_3NO$ IC-004108

Trifluoro(morpholine-N^4)boron, 10CI

Trifluoroborane morpholine. Morpholine, compd. with trifluoroborane(1:1), 9CI

[660-92-4]



X = F

M 154.9

Pisarev, M.A. *et al*, *CA*, 1973, **79**, 89955s.
Kugai, N. *et al*, *Adv. Exp. Med. Biol.*, 1977, **103**, 537.
Syutkin, E.A. *et al*, *Probl. Endokrinol.*, 1980, **26**, 53.

$C_4H_9CdClN_2O_4$ IC-004109

Aquachloro(*N*-glycylglycinato-N^N,O^O)cadmium

[50989-17-8]

$Cd(OH_2)Cl[H_2NCH_2CONHCH_2COO]$

M 296.9

Polymeric struct. with 6-coord. Cd. Synth. from $CdCl_2$ + glycylglycine at pH8. Cryst. (H_2O).

Flook, R.J. *et al*, *J. Chem. Soc., Chem. Commun.*, 1973, 753 (*synth, cryst struct*)

$C_4H_9Cl_2OPPt$ IC-004110

Carbonyldichloro(trimethylphosphine)platinum, 10CI

Dichloro(trimethylphosphine)platinum carbonyl

M 370.0

***cis*-form** [66219-24-7]

Cryst. (CH_2Cl_2/Et_2O). Mp 196-198°.

Browning, J. *et al*, *J. Chem. Soc., Dalton Trans.*, 1977, 2061 (*synth, ir, raman, nmr*)

$C_4H_9Cl_2OTi$ IC-004111

Butoxydichlorotitanium(*III*), 11CI

Butanolatodichlorotitanium(III)

[32448-92-3]

$TiCl_2(OCH_2CH_2CH_2CH_3)$

M 191.9

Synth. by reaction of $TiCl_2(OBu)$ with Et_2AlCl or from $TiCl_2(OBu)_2$ with $EtAlCl_2$ in hexane. Catalyst for ethylene polym.

U.K. Pat., 1 237 169, (1969); *CA*, **75**, 110730u (*synth, use*)
Japan. Pat., 59 164 309, (1984); *CA*, **102**, 46427x (*use*)
Hu, Y. *et al*, *Gaofenzi Tongxun*, 1985, 1, 54; *CA*, **103**, 114961q (*synth, use*)

$C_4H_9Cl_2O_2V$ IC-004112

Butoxydichlorooxovanadium(*V*), 11CI

[19120-66-2]

$VOCl_2(OCH_2CH_2CH_2CH_3)$

M 210.9

Tetrahedral. Although the subject of many patents there is no synthesis in the scientific literature after 1936. Synth. from $VOCl_3$ and $Bu_3Si(OBu)$ in the presence of an amine. Olefin polym. catalyst.

Japan. Pat., 59 58 013, (1984); *CA*, **101**, 91642d (*use*)
Ger. Pat., 3 447 290, (1986); *CA*, **105**, 227023v (*synth*)

$C_4H_9Cl_3OTi$ IC-004113

Butoxytrichlorotitanium(*IV*), 11CI

Butanolatotrichlorotitanium(IV). *Titanium*(IV) *butoxide trichloride*

[3112-68-3]

$TiCl_3(OCH_2CH_2CH_2CH_3)$

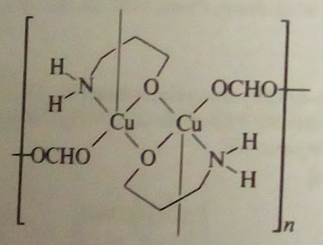
M 227.3

Synth. by reaction of $TiCl_4$ and butanol at 0°. An alternative reaction of $Ti(OBu)_4$ with MeP(O)(OPh)Cl yields $TiCl_3(OBu)$ and MeP(O)(OBu)(OPh) or from $TiCl_4$ and$(BuO)SiR_3$. It may be even be made from $Ti(OBu)_4$ + $SOCl_2$. Used extensively in Ziegler-Natta catalysts. Pale yellow solid.

Sigwalt, P. *et al*, *Bull. Soc. Chim. Fr.*, 1964, 482 (*synth, use*)
Gopinathan, C. *et al*, *Indian J. Chem.*, 1965, **3**, 136 (*synth, from $Ti(BuO)_4$ + $SOCl_2$*)
Zhinkina, L.N. *et al*, *Plast. Massy*, 1966, 23; *CA*, **65**, 18702f (*synth from $Ti(OBu)_4$*)
Sehra, J.C. *et al*, *Makromol. Chem.*, 1984, **189**, 1117 (*use*)
Czaja, K. *et al*, *Polimery (Warsaw)*, 1984, **29**, 411 (*use*)
Ger. Pat., 3 447 297, (1986); *CA*, **105**, 175282g (*synth, use*)

$C_4H_9CuNO_3$ IC-004114

(3-Aminopropanolato)formatocopper(*II*)



dimeric unit

M 182.6

Dimeric with axial formates coordinated to adjacent dimeric units.

Dimer: [112784-80-2]. *Bis[μ-(3-amino-1-propanolato*-N,O:O)*]bis(formato*-O)*dicopper*
$C_8H_{18}Cu_2N_2O_6$ M 365.3
Blue cryst. (EtOH). Insol. Me_2CO.

Sillanpää, R. *et al*, *Inorg. Chim. Acta*, 1987, **134**, 233.

$C_4H_9F_3O_3SSi$ IC-004115

Trimethylsilyl trifluoromethanesulfonate

Trimethylsilyl triflate

[27607-77-8]

$F_3CSO_2OSiMe_3$

M 222.2

Silylation reagent, catalyst for transnucleosidations. Bp_{750} 140°, Bp_{10} 36.5°.

Schmiesser, M. *et al*, *Chem. Ber.*, 1970, **103**, 868 (*synth*)
Azuma, T. *et al*, *Chem. Pharm. Bull.*, 1977, **25**, 3347.

$C_4H_9HgS^{\oplus}$ IC-004117

(1-Butanethiolato)mercury(1+)

Butylthiomercury(1+)

$[H_3CCH_2CH_2CH_2SHg]^{\oplus}$

M 289.7 (ion)

Prepd. in Py; monomeric when dilute; dimerises in more conc. soln. $[C_4H_9SHgHgSC_4H_9]^{2\oplus}$. Hg—Hg 369.5 pm; Py probably coord. in soln.

Perchlorate: [109710-17-0].
Synth. from $Hg(SCH_2CH_2CH_2CH_3)_2$ and $Hg(ClO_4)_2$ in Py at 60°. Not isol.

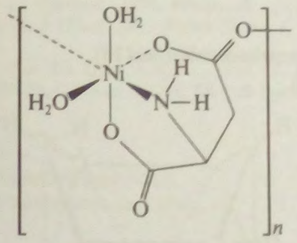
Persson, I. *et al*, *Inorg. Chim. Acta*, 1987, **129**, 47 (*synth, soln struct*)

$C_4H_9NNiO_6$ IC-004118

[2-Aminobutanedioato(2–)-*N*,*O*,*O*′]diaquanickel(*II*)

Diaqua(aspartato)nickel(II). *Aspartatodiaquanickel*(II)

[60734-59-0]



M 225.8

Polymeric chain struct. Ni octahedrally coord. Turquoise cryst. + H_2O (MeOH aq.). Sol. H_2O. Mp 207-212° dec. μ_{eff} = 3.16μ_B.

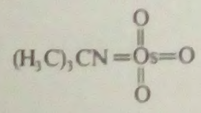
Antolini, L. *et al*, *J. Chem. Soc., Dalton Trans.*, 1982, 2541 (*synth, cryst struct, uv-vis, magnetism*)

$C_4H_9NO_3Os$ IC-004119

Trioxo(*tert*-butylimido)osmium

[2-Methyl-2-propanaminato(2-)]trioxoosmium, 9CI.
Trioxo(tert-*butylnitrido)osmium*. N-tert-*Butyl osmiamate*

[50381-48-1]



M 309.3

Molecular with approx. C_{3v} symmetry. Synth. from OsO_4 and $(CH_3)_3CNH_2$ in pentane chilled in a salt-ice bath. Reacts with a variety of alkenes to give, after reductive cleavage of the intermed. osmate esters, vicinal amino alcohols. Bright-yellow needles (pentane at –10°). Mp 112° dec. Subl. 40-50° *in vacuo*. Ir $\nu_{Os=N}$ 1184; $\nu_{Os=O}$ 912, 925 cm^{-1}.

Milas, N.A. *et al*, *J. Am. Chem. Soc.*, 1959, **81**, 6089 (*synth*)
Inorg. Synth., 1960, **6**, 204 (*synth*)

$C_4H_9NO_6PZn^{\ominus}$ IC-004120

(Acetato-*O*)[mono(2-aminoethyl)phosphato(2–)-*O*′]zincate(1–)

$[Zn(OAc)[P(O)_3OCH_2CH_2NH_2]]^{\ominus}$

M 263.4 (ion)

Phosphate groups form layers with tetrahedral zinc undulating perpendicular to the layer direction. Amino groups H-bonded to acetate groups.

H compd.: [120313-06-6].
$C_4H_{10}NO_6PZn$ M 264.4
Colourless cryst. (H_2O).

Ortiz-Avila, Y. *et al*, *Inorg. Chem.*, 1989, **28**, 2137 (*synth, cryst struct*)

$C_4H_9O_4Re$ IC-004121

(*tert*-Butanolato)trioxorhenium(*VII*)

(2-Methyl-2-propanolato)trioxorhenium(VII), *11CI.* tert-*Butyl perrhenate*

[39705-63-0]

$(H_3C)_3COReO_3$

M 307.3

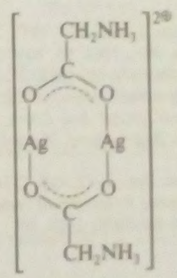
Presumed monomeric. Synth. from ReO_3Cl and $Me_3SiOC(CH_3)_3$. Colourless needles, thermally unstable at r.t. V. sol. ethers, aliphatic, aromatic and chlorinated hydrocarbons.

Edwards, P. *et al*, *J. Chem. Soc., Dalton Trans.*, 1984, 2695 (*synth, ir, nmr, props*)

$C_4H_{10}Ag_2N_2O_4^{2\oplus}$ IC-004122

Bis(μ-glycine)disilver(2+)

(Glycine)silver(I)(*1+*) *dimer*



M 365.8 (ion)

Dinitrate: [30051-67-3].
Light-sensitive colourless cryst. Ferroelectric below –55°.

$C_4H_{10}Ag_2N_2S^{\oplus} - C_4H_{10}B_6$

Rao, J.K.M. *et al*, *Acta Crystallogr., Sect. B*, 1972, **28**, 1484 (*cryst struct, synth*)

$C_4H_{10}HgS_2$ IC-004165

Bis(ethylthio)mercury

Bis(ethanethiolato)mercury. Mercury ethanethiolate

[811-50-7]

EtSHgSEt

M 322.8

Monomeric in $CHCl_3$ and Py with linear Hg (v. weak additional contacts with 4 other S). Component of Ziegler catalyst combinations. Cryst. (EtOH). Sol. $CHCl_3$. Mp 72-73°.

[64762-06-7]

$C_4H_{10}MgO_2$ IC-004167

Magnesium ethoxide

Diethoxymagnesium. Ethanol, magnesium salt, 9CI. Ethyl alcohol, magnesium salt, 8CI

[2414-98-4]

$Mg(OEt)_2$

M 114.4
Prepd. by reaction of Mg with EtOH under strictly anhydrous conditions. Activators such as $HgCl_2$ can by used to promote reaction. Commercially available. Catalyst for polym. of olefins. Colourless moisture sensitive hexagonal cryst. Reacts with $H_2O \rightarrow$ EtOH + $Mg(OH)_2$. Calcination in air or under vacuum yields, without hydrolysis, MgO. Sol. EtOH; insol. C_6H_6; insol. THF. Mp >300°.

▷ Flammable.

$C_4H_{12}Al_8NNa_7O_{72}Si_{28}$ IC-004195

Zeolite omega
Zeolite Ω. Mazzite

$(Me_4N)Na_7[Al_8Si_{28}O_{72}]$

M 2389.2
First example of a synthetically produced zeolite subsequently found in nature. Zeolite struct. MAZ. Struct. consists of two sets of perpendicular 1-D channels (740 and 340 × 560 pm across). Synth. from Na_2O—Al_2O_3—SiO_2—H_2O—Me_4NBr gels. Occurs as rare mineral in France. Use for adsorption of small molecules. White fibres or spherulites. Dihydrated form stable at 750°. Na often replaced by K. Void vol. 0.38 $cm^3\ cm^{-3}$.

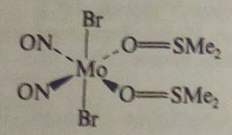
$C_4H_{12}Br_2MoN_2O_4S_2$ IC-004210

Dibromobis(dimethyl sulfoxide)dinitrosylmolybdenum

Dibromodinitrosylbis[*sulfinylbis*[*methane*]-O]*molybdenum, 11CI*

[89247-92-7]



M 472.0
Distorted octahedral. Synth. from $MoBr_2(NO)_2$ and DMSO in CH_2Br_2. Green cryst.

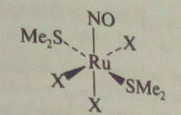
Schumacher, C. *et al*, *Z. Anorg. Allg. Chem.*, 1984, **508**, 79 (*cryst struct, synth, ir*)

$C_4H_{12}Br_3NORuS_2$ IC-004211

Tribromobis(dimethyl sulfide)(nitrosyl)ruthenium

Tribromo(*nitrosyl*)*bis*[*thiobis*[*methane*]]*ruthenium, 9CI*

[61567-04-2]



X = Br

M 495.0
Single *mer,trans*-octahedral isomer obsd. Prepared by treating an NO-saturated EtOH soln. of $RuBr_3{\cdot}xH_2O$ with SMe_2. Red-brown solid. Ir ν_{NO} 1872; ν_{RuBr} 275, 236 cm^{-1}.

Fergusson, J.E. *et al*, *Aust. J. Chem.*, 1976, **29**, 2159 (*synth, ir, uv, pmr, cmr*)

$C_4H_{12}Br_4MoS_2^{\ominus}$ IC-004212

Tetrabromobis(dimethyl sulfide)molybdate(*III*)(1−)

Tetrabromobis[*thiobis*[*methane*]]*molybdate*(III)(*1−*), *11CI*

$[MoBr_4(SMe_2)_2]^{\ominus}$

M 539.8 (ion)
trans-Octahedral anion.

Trimethylsulfonium salt: [96342-01-7].
Synth. by reaction of $MoBr_4$ and excess Me_2S. Red cryst.

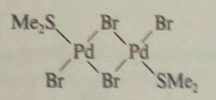
Schumacher, C. *et al*, *Z. Anorg. Allg. Chem.*, 1985, **520**, 25 (*cryst struct, synth, ir*)

$C_4H_{12}Br_4Pd_2S_2$ IC-004213

Tetrabromobis(dimethyl sulfide)dipalladium(*II*)

Di-μ-bromodibromobis(*methyl sulfide*)*dipalladium, 8CI. Di-μ-bromodibromobis*[*thiobis*(*methane*)]*dipalladium, 9CI*

[21315-76-4]



M 656.7
Has 2 Br bridges in square planar *trans*-configuration. Contrast Pt analogue (Tetrabromobis(diethyl sulfide) diplatinum(*II*), IC-006170) which is S-bridged. More stable than Se, Te analogues. Synth. from $Pd(SMe_2)_2Br_2$ in EtOH or Tetrachloropalladate(*II*)(2−), IC-017115 + SMe_2. Monoclinic prisms. Sol. CH_2Cl_2, MeOH. Mp 169°.

Sales, D.L. *et al*, *J. Chem. Soc. A*, 1968, 1852 (*struct*)
Goggin, P.L. *et al*, *J. Chem. Soc., Dalton Trans.*, 1972, 1904 (*synth, ir, pmr*)

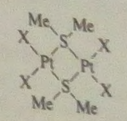
$C_4H_{12}Br_4Pt_2S_2$ IC-004214

Tetrabromobis(μ-dimethyl sulfide)diplatinum(*II*), 8CI

Tetrabromobis[*μ-thiobis*[*methane*]]*diplatinum*(II), *9CI*

[20004-38-0]



X = Br

M 834.0
Structure with bridging sulfides deduced from ir and raman spectra. Synth. from Tetrabromoplatinate(*II*)(2−), IC-002066 + $[PtBr_2(SMe_2)_2]$. Yellow solid. Sol. CH_2Cl_2. Mp 190-195° dec. Similar compds. known for Cl, other SR_2.

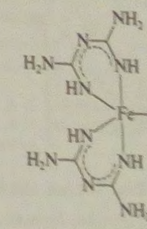
Monomer: Dibromo(*dimethyl sulfide*)*platinum*(II)
$C_2H_6Br_2PtS$ M 417.0
Has no separate existance.

Goggin, P.L. *et al*, *J. Chem. Soc., Dalton Trans.*, 1974, 576 (*synth*)

$C_4H_{12}ClFeN_{10}^{\ominus}$ IC-004215

Chlorobis(imidodicarbonimidic diamidato-*N'',N'''*)iron

Bis(*biguanidinato*)*chloroiron*



M 291.5 (ion)
Spin quartet ground state of Fe(*III*).

Monohydrochloride: [77648-28-3].
$C_4H_{12}Cl_2FeN_{10}$ M 326.9
Synth. from anhyd. $FeCl_3$ + ligand in Me_2CO. Pale brown solid; air-stable. Insol. most org. solvs.

Lahiry, S. *et al*, *Inorg. Chem.*, 1981, **20**, 2789 (*synth, mössbauer, magnetism*)

$C_4H_{12}ClGaN_2$ IC-004216

Chlorobis(dimethylamido)gallium(*III*)

$[GaCl(NMe_2)_2]_2$

M 193.3
Dimeric.

Dimer: [57776-77-9]. *Dichlorotetrakis*(*dimethylamido*)*digallium*(III). *Dichlorotetrakis*(*N-methylmethanaminato*)*digallium, 9CI*
$C_8H_{24}Cl_2Ga_2N_4$ M 386.6
Synth. from $GaCl_3$ and $LiNMe_2$. V. air- and moisture-sensitive colourless cryst. (pentane). Sol. hexane, C_6H_6, Et_2O. Mp 60-61°. Isomers in soln. detected by nmr.

Nöth, H. *et al*, *Z. Naturforsch., B*, 1975, **30**, 681 (*synth, pmr, ir*)

$C_4H_{12}ClN_2OP$ IC-004217

Tetramethylphosphorodiamidic chloride, 9CI

Bis(dimethylamino) phosphoryl chloride. Bis(dimethylamino) phosphinic chloride. Chlorobis(dimethylamido) oxophosphorus(V)

[1605-65-8]

$(Me_2N)_2P(O)Cl$

M 170.5

Liq. d_4^{20} 1.823. Bp_{30} 133-134°, Bp_{10} 110°, $Bp_{0.6}$ 79-82°. n_D^{25} 1.4661.

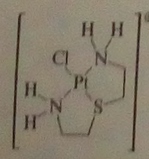
$C_4H_{12}ClN_2PtS^{\oplus}$ IC-004218

Chloro[bis(2-aminoethyl) sulfide]platinum(*II*)

Chloro[2,2'-thiobis(ethanamine)]platinum(1+), *10CI*



M 350.7 (ion)

Ring system strained. Relat. compds. also known.

Chloride. [71853-03-7]

$C_4H_{12}Cl_2N_2PtS$ M 386.2

Yellow-white solid.

Albertin, G. *et al, Inorg. Chem.*, 1979, **18**, 1451.

$C_4H_{12}ClN_2Sb$ IC-004219

Chlorobis(dimethylamino)stibine

1-Chloro-N,N,N',N'-tetramethylstibinediamine, 11CI. Chlorobis(dimethylamido)antimony

[95688-59-8]

$(Me_2N)_2SbCl$

M 245.3

Yellow cryst. Mp *ca.* 140° dec.

Ensinger, U. *et al, Z. Anorg. Allg. Chem.*, 1984, **514**, 137; 1985, **520**, 160 (*synth, ir, pmr, ms*)

$C_4H_{12}Cl_3CrN_2$ IC-004220

Dichloro(2-methyl-1,2-propanediamine)chromium(*II*), 8CI

Dichloro(1,2-diamino-2-methylpropane)chromium(II)

[33826-34-5]

$CrCl_2[H_2NC(CH_3)_2CH_2NH_2]$

M 211.0

6-Coordinate, chloride bridged polymer. Light blue, air-sensitive solid. μ_{eff} = 4.02μ_B (300K); 2.67μ_B (90K).

Larkworthy, L.F. *et al, J. Chem. Soc. A*, 1971, 2766 (*synth, props*)

$C_4H_{12}Cl_2CrO_2S_2$ IC-004221

Dichlorobis(dimethyl sulfoxide)chromium(*II*)

Dichlorobis(methyl sulfoxide)chromium. Chromium(II) *chloride bis(dimethyl sulfoxide)*

$[CrCl_2(O{=}SMe_2)_2]_n$

M 279.1

Chloride-bridged polymer with distorted octahedral Cr(*II*). Pale blue cryst. (EtOH). μ_{eff} = 4.91μ_B (293K).

Holah, D.G. *et al, Inorg. Chem.*, 1965, **4**, 1721 (*synth, uv, ir*)

$C_4H_{12}Cl_2CuO_2S_2$ IC-004222

Dichlorobis(dimethyl sulfoxide)copper(*II*)

Dichlorobis(methyl sulfoxide)copper, 8CI. Dichlorobis[sulfinylbis[methane]-O]copper, 9CI. Copper(II) *chloride bis(dimethyl sulfoxide)*

[14215-41-9]

$CuCl_2(O{=}SMe_2)_2$

M 290.7

Square pyramidal geometry around Cu with 2 short *trans* Cu—Cl contacts (229, 228 pm) and a longer Cu—Cl contact between formula units (270 pm) at the axial position giving a homopolymer. Synth. by addition of DMSO to $CuCl_2$ (anhydrous) in EtOH. Green cryst. Sol. DMSO; insol. Et_2O. Mp 125° dec.

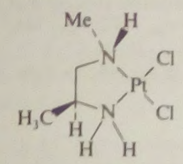
$C_4H_{12}Cl_2N_2Pt$ IC-004225

Dichloro(N^1-methyl-1,2-propanediamine)platinum, 9CI

Dichloro(N-*methyl-1,2-diaminopropane*)*platinum*(II). *Dichloro*(*1-methylamino-2*(S)-*aminopropane*)*platinum*(II)



(R_N,S_C)-*form*

M 354.1

Unusual chiral square planar Pt(*II*) complex. Sl. sol. H_2O. Stereoisomers separated mechanically.

(R_N,S_C)-*form* [56258-73-2]

Yellow needles.

(S_N,S_C)-*form* [56323-56-9]

(−)-*form*

Pale yellow blocks.

Bosnich, B. *et al, Inorg. Chem.*, 1975, **14**, 2768 (*synth, uv-vis, pmr, cd*)
Ball, R.G. *et al, Inorg. Chem.*, 1976, **15**, 1704 (*cryst struct, abs config*)

$C_4H_{12}Cl_2OS_2V$ IC-004226

Dichlorobis(dimethyl sulfide)oxovanadium(*IV*)

Dichlorobis(methyl sulfide)oxovanadium(IV), *8CI*

[18661-56-8]

$VOCl_2(SMe_2)_2$

M 262.1

Prob. square pyramidal monomer: detailed geometry is not known. Synth. by reduction of $VOCl_3$ by Me_2S in *iso*-octane. Blue solid. Ir ν_{VO} 995 cm^{-1}; paramagnetic, μ_{eff} = 1.77μ_B.

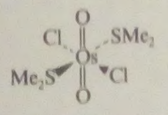
Baker, K.L. *et al, J. Inorg. Nucl. Chem.*, 1967, **29**, 1881 (*synth, uv-vis, ir, magnetism*)

$C_4H_{12}Cl_2O_2OsS_2$ IC-004227

Dichlorobis(dimethyl sulfide)dioxoosmium(*VI*)

Dichlorodioxobis[thiobis[methane]]osmium(VI), *11CI*

[95824-04-7]



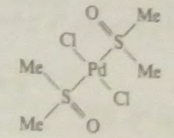
M 417.3

$C_4H_{12}Cl_2O_2PdS_2$ IC-004228

Dichlorobis(dimethyl sulfoxide)palladium(*II*)

Dichlorobis[sulfinylbis(methane)]palladium(II), *9CI. Dichlorobis(methyl sulfoxide)palladium*(II), *8CI*

[12386-08-2]



trans-S-bonded form

M 333.5

O-bonded form not positively identified, prob. non-existent. Simplest of many $PdX_2(R_2SO)_2$ complexes.

trans-O-form [14568-12-8]

trans-S-form [15274-32-5]

Orange cryst. (CH_2Cl_2/C_6H_6 or DMSO/Me_2CO). Mp 203-204°. Soln. dec. to Tetrachlorobis(dimethyl sulfoxide)dipalladium(*II*), IC-004238, but formation of *cis*-isomer claimed in MeCN.

[15280-84-9, 38929-74-7]

$C_4H_{12}Cl_2O_2V$ IC-004230

Dichlorobis(ethanol)vanadium(*II*), 11Cl

Vanadium(II) *chloride bis(ethanol)*

[86973-30-0]

$VCl_2(EtOH)_2$

M 213.9

Octahedral polymeric chain struct. Synth. from $VCl_2.2H_2O$ + equimolar EtOH/ethyl orthoformate. Pale green solid. Paramagnetic, $\mu_{eff} = 3.33\mu_B$ (295K), $2.61\mu_B$ (90K), $\theta = 113$K.

Bis-EtOH complex: see *Dichlorotetrakis(ethanol) vanadium*(II), IC-006281

Larkworthy, L.F. *et al*, *Inorg. Chim. Acta*, 1983, **71**, 81 (*synth, uv-vis, magnetism*)

$C_4H_{12}Cl_2O_4W$ IC-004231

Dichlorotetramethoxytungsten(*VI*), 9Cl

$WCl_2(OMe)_4$

M 378.8

Octahedral.

cis-form [35869-30-8]

Interatomic distances: W—O 184, W—Cl 243, 241 pm. Monomeric, *cis*-config. persists in soln. Synth. form WCl_6 + 4MeOSiMe$_3$. Pale yellow cryst. Mp 79-81°.

trans-form [35869-31-9]

Synth. from *cis*-$W(OMe)_4F_2$ and $[(H_3C)_3C]SiCl$. Pale lemon-yellow cryst.

Handy, L.B. *et al*, *Inorg. Chem.*, 1972, **11**, 523 (*pmr, synth*)

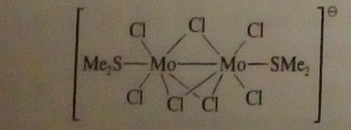
$C_4H_{12}Cl_7Mo_2S_2^{\ominus}$ IC-004244

Tri(μ-chloro)tetrachlorobis(dimethyl sulfide) dimolybdate(*IV*)(1−)

Tri-μ-chlorotetrachlorobis[thiobis[methane]]dimolybdate(IV) *(1−), 11Cl*



M 564.3 (ion)

Distorted confacial bioctahedral framework, with a weak metal-metal interaction. The Mo atoms are antiferromagnetically coupled.

Ph_4P salt: [83779-65-1].
Triclinic cryst.

Boorman, P.M. *et al, J. Chem. Soc., Chem. Commun.*, 1982, 899 (*cryst struct, synth*)

$C_4H_{12}Cl_9NiP_4$ IC-004245

Tetrakis(methylphosphonous dichloride)nickel, 11Cl

Tetrakis[dichloro(methyl)phosphine]nickel(0)

[76404-15-4]

$Ni(PMeCl_2)_4$

M 526.3

First Ni(0) complex discovered after $Ni(CO)_4$ to be formed by direct synth. Air sensitive yellow solid. Sol. EtOH, pentane.

Quin, L.D., *J. Am. Chem. Soc.*, 1957, **79**, 3681 (*synth*)
Taylor, N.J., *J. Chem. Soc., Chem. Commun.*, 1985, 476 (*synth*)

$C_4H_{12}CoO_8S_4^{2\ominus}$ IC-004246

Tetrakis(methanesulfinato-*O*)cobaltate(*II*)(2−), 9Cl

$[Co[OS(O)Me]_4]^{2\ominus}$

M 375.3 (ion)

Prob. tetrahedral.

Bis-Ph_4P salt: [58904-97-5].
Blue-violet solid. Sol. EtOH, Me_2CO. Paramagnetic. Dec. at 190°

Lorenz, I.P. *et al, Inorg. Nucl. Chem. Lett.*, 1976, **12**, 141 (*synth, ir, uv, magnetism*)

$C_4H_{12}CoP_2S_4$ IC-004247

Bis(dimethyldithiophosphinato)cobalt(*II*)

Bis(dimethylphosphinodithioato-S,S′)cobalt(II), *9Cl*

[56199-77-0]

$[Co(S_2PMe_2)_2]_n$

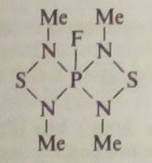
M 309.2

Struct. comprises infinite independent chains of tetrahedral Co atoms linked by alternating pairs of ligand bridges. Green cryst.

Cavell, R.G., *Inorg. Chem.*, 1972, **11**, 1759 (*synth, struct*)

$C_4H_{12}FN_4PS_2$ IC-004248

4-Fluoro-1,3,5,7-tetramethyl-2,6-dithia-1,3,5,7-tetraaza-4-phospha(4P^V)spiro[3.3]heptane, 8Cl



M 230.2

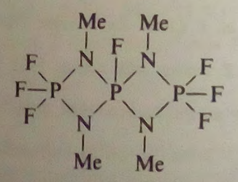
2,2,6,6-Tetraoxide: [21465-18-9].
$C_4H_{12}FN_4O_4PS_2$ M 294.2
Colourless hygroscopic cryst. (C_6H_6). V. sol. CH_2Cl_2, 1,2-dichloroethane; less sol. C_6H_6, CCl_4; insol. pet. ether. Mp 184-188° dec. (180-182°). Monomeric.

Becke-Goehring, M. *et al, Z. Anorg. Allg. Chem.*, 1969, **365**, 185; **371**, 88 (*synth, pmr, F-19 nmr, P-31 nmr*)

$C_4H_{12}F_7N_4P_3$ IC-004249

2,2,2,4,6,6,6-Pentafluoro-2,2,6,6-tetrahydro-1,3,5,7-tetramethyl-1,3,5,7-tetraaza-2,4,6-triphospha(4-P^V) spiro[3.3]heptane

[67485-36-3]



M 342.0

Colourless cryst. Mp 67-69°. Subl.$_{0.5}$ 40°.

Kubjacek, M. *et al, Monatsh. Chem.*, 1978, **109**, 587 (*synth, ms, ir*)

$C_4H_{12}FeO_4^{\ominus}$ IC-004250

Tetramethoxyferrate(*III*)(1−)

$[Fe(OMe)_4]^{\ominus}$ (T_d)

M 179.9 (ion)

Soln. species obsd. conductometrically in reaction of $FeCl_3$ with NaOMe. Sol. alcohols.

Na salt: [61385-33-9].
Not isol.

K salt: [15021-90-6].
Not isol.

Meerwein, H. *et al, Justus Liebigs Ann. Chem.*, 1929, **476**, 113 (*synth*)
Ludman, C.J. *et al, J. Chem. Soc. A*, 1966, 1816 (*synth*)

$C_4H_{12}IN_2PS$ IC-004254

Tetramethylphosphorodiamidothioic iodide, 11Cl

Iodobis(dimethylamido)thiophosphorus(V)

[93374-05-1]

$(Me_2N)_2P(S)I$

M 278.0

Liq. $Bp_{0.07}$ 75-76°.

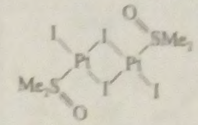
Mitel'man, I.E. *et al, Zh. Obshch. Khim.*, 1984, **54**, 1245; *J. Gen. Chem. USSR (Engl. Transl.)*, 1984, **54**, 1114 (*synth, P-31 nmr*)

$C_4H_{12}I_4O_2Pt_2S_2$ IC-004255

Bis(dimethyl sulfoxide)tetraiododiplatinum(*II*)

Tetraiodobis[sulfinylbis[methane]]diplatinum, 9Cl. Di-μ-iododiiodobis[sulfinylbis[methane]S]diplatinum, 10Cl

[39336-40-8]



M 1054.0

Structure assumed, not proven. Similar compds. exist for Cl, Br and other R_2SO ligands. Synth. from Me_2SO + $[PtI_4]^{2\ominus}$ or from Me_2SO + Dichlorobis(dimethyl sulfoxide)platinum(*II*), IC-004229 + $I^{\ominus}$. Red-brown solid. Sol. $CHCl_3$, DMSO.

Monomer: Platinum diiodide dimethylsulfoxide
$C_2H_6I_2OPtS$ M 527.0
Unknown.

[72557-01-8]

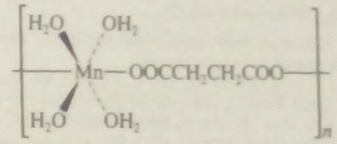
Kukushkin, Yu.N. *et al, Russ. J. Inorg. Chem. (Engl. Transl.)*, 1973, **18**, 595 (*synth*)
Kong, P.-C. *et al, Inorg. Chim. Acta*, 1979, **37**, L457 (*synth*)

$C_4H_{12}MnO_8$ IC-004256

Tetraaqua[butanedioato(2−)-*O*]manganese, 11Cl

Tetraaqua(μ-succinato)manganese(II)

[65629-64-3]



M 243.0

Polymeric chain struct. Cryst.

Gupta, M.P. *et al, Indian J. Phys., A*, 1977, **51**, 223 (*cryst struct*)

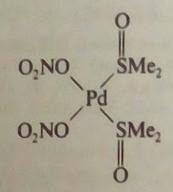
$C_4H_{12}N_2O_8PdS_2$

Bis(dimethylsulfoxide)dinitratopalladium(*II*)

Bis(nitrato-O)bis[sulfinylbis[methane]-S]palladium, 9CI

[69417-26-1]



cis-form

M 386.6
Square planar.

cis-form [19995-58-5]
Synth. from $Pd(NO_3)_2$ and DMSO. Orange-yellow cryst. ($MeNO_2$). Mp 143-145°.

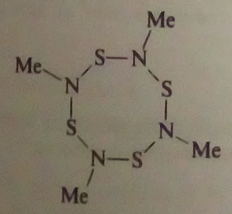
Langs, D.A. *et al*, *J. Chem. Soc., Chem. Commun.*, 1967, 1080 (*synth, cryst struct*)

IC-004264

$C_4H_{12}N_4S_4$

2,4,6,8-Tetramethyl-1,3,5,7,2,4,6,8-tetrathiatetrazocine

[28924-12-1]



M 244.4
Interatomic distances: S—N 167.7, C—N 147.9 pm; ring has crown conformn. Formed from $MeNH_2 + SCl_2$ together with polymeric and other products. Colourless needles. Sol. hexane, MeOH. Bp 126-126.5°. Dec. at 190°.

Stone, B.D. *et al*, *J. Am. Chem. Soc.*, 1959, **81**, 3580 (*synth, ir, raman*)
Macdonald, A.L. *et al*, *Can. J. Chem.*, 1973, **51**, 2504 (*cryst struct*)

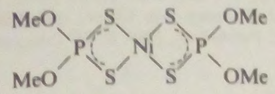
IC-004265

$C_4H_{12}NiO_4P_2S_4$

Bis(*O,O*-dimethyldithiophosphato)nickel(*II*)

Bis(O,O-*dimethylphosphorodithioato-S,S′)nickel, 11Cl*

[15844-04-9]



M 373.0
Square planar nickel. Used in synth. of pressure sensitive colour copying sheets. Purple cryst. Sol. Me_2CO, most org. solvs. H_2O. Diamagnetic. Forms adducts with various Lewis bases; phosphines cause reduction.

Bis-Py complex:
$C_{14}H_{22}N_2NiO_4P_2S_4$ M 531.2
Green cryst.

Phen complex: [29946-07-4].
$C_{16}H_{20}N_2NiO_4P_2S_4$ M 553.2
Bright green needles (Me_2CO/EtOH). Sol. Me_2CO. Contains *cis*-octahedral Ni.

Kastalski, V. *et al*, *Acta Crystallogr., Sect. B*, 1969, **25**, 909 (*cryst struct*)

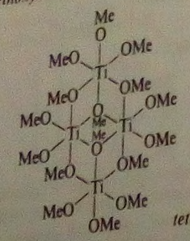
$C_4H_{12}O_4Ti$ IC-004269

Titanium(*IV*) methoxide ($Ti(OMe)_4$)

Tetramethoxytitanium. Titanium tetramethoxide



tetramer

M 172.0

Oligomeric. Synth. either by reaction of $TiCl_4$, MeOH and NH_3 or from $Ti[OCH(CH_3)_2]_4$ and MeOH. Used in olefin and ester polym. catalysts and in the formation of TiO_2 thin-film capacitors. Liq., readily hydrol.

Trimer: [12563-47-2].
$C_{12}H_{36}O_{12}Ti_3$ M 516.0
Yellow liq. Mp 209-210°. Only indirect soln. evidence exists for this formulation.

Tetramer: Di-μ_3-methoxytetra-μ-methoxydecamethoxytetratitanium(IV)
$C_{16}H_{40}O_{16}Ti_4$ M 688.0
Existence confirmed by X-ray diffraction. Ti in octahedral environment.

$C_4H_{12}O_4Zn^{2\ominus}$ IC-004270

Tetramethoxyzincate(2 –)

$[Zn(OMe)_4]^{2\ominus}$

M 189.5 (ion)

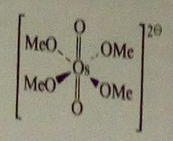
Di-Na salt: [52827-32-4].
Synth. from $ZnCl_2$ and NaOMe in MeOH. Solid. Monomeric in MeOH.

Shiner, V.J. *et al*, *Inorg. Chem.*, 1975, **14**, 157 (*synth*)

$C_4H_{12}O_6Os^{2\ominus}$ IC-004271

Tetramethoxydioxoosmate(*VI*)(2 –)

[120169-51-9]



M 346.3 (ion)

Di-K salt: [37549-62-5].
Synth. by adding MeOH soln. of KOH to OsO_4 in MeOH. Synthetic reagent, e.g. in carboxylation reactions at OMe. Brown solid.

Bis-Me_4N salt: [125081-64-3].
Synth. by adding MeOH soln. of $[NMe_4]OH$ to OsO_4 in MeOH.

Bis-tetrabutylammonium salt: [125115-45-9].
Criegee, R., *Justus Liebigs Ann. Chem.*, 1936, **75**, 522 (*synth*)

$C_4H_{12}O_6PdS_2$ IC-004272

Bis(dimethylsulfoxide)sulfatopalladium(*II*)

[Sulfato(2 –)]bis[sulfinylbis[methane]]palladium

$(Me_2SO)_2Pd(SO_4)$

M 358.7

Prob. contains chelating sulfato groups. Prepd. by addition of 2,2-dimethoxypropane to a filtered soln. of $PdSO_4.2H_2O$ in DMSO. Yellow solid. V. hygroscopic.

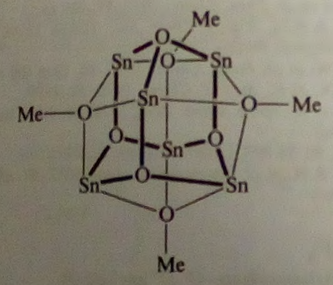
Eskenazi, R. *et al*, *J. Inorg. Nucl. Chem.*, 1966, **28**, 521 (*synth, ir*)

$C_4H_{12}O_8Sn_6$ IC-004273

Tetra-μ_3-methoxytetra-μ_3-oxohexatin, 9CI

Tetramethoxytetraoxyhexastannane

[67450-12-8]



M 900.3

Has an adamantane-like skeleton with overall ~ D_{2d} symmetry. Intermed. in the hydrol. of $Sn(OMe)_2$. Monoclinic cryst.

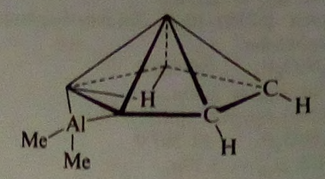
Harrison, P.G. *et al*, *J. Chem. Soc., Chem. Commun.*, 1978, 112 (*synth, cryst struct, mössbauer*)

$C_4H_{13}AlB_4$ IC-004274

[(2,6-η)-Heptahydro-4,5-dicarbahexaborato(1 –)] dimethylaluminium

μ-Dimethylaluminium-2,3-η-dicarbahexaborane

[55663-16-6]



M 131.3

nido-Tentative struct. shown. Extremely unstable in soln. or liq. phase, characterised by ms. Sl. volatile liq.

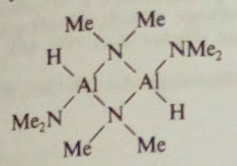
Magee, C.P. *et al*, *J. Organomet. Chem.*, 1975, **86**, 159 (*synth*)

$C_4H_{13}AlN_2$ IC-004275

Bis(dimethylamido)hydroaluminium

Bis(dimethylamino)alane

[2826-17-7]



Dimer

M 116.1

Dimeric. Reagent for hydrometallation of alkenes. Analogous diethyl and diisopropyl-amino derivs. also descr.

Dimer: [88764-40-3]. *Dihydrobis[μ-(N-methylmethanaminato)]bis(N-methylmethanaminato) dialuminium, 11CI*
$C_8H_{26}Al_2N_4$ M 232.2
Synth. from Me_3NAlH_3 and Me_2NH. Colourless air and moisture sensitive solid (by subl.). Sol. Et_2O, C_6H_6. Mp 63-65°. $Subl._{0.001}$ 35-50°.

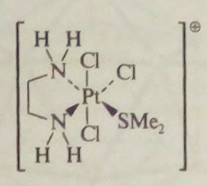
$C_4H_{14}Cl_3N_2PtS^{\oplus}$

Trichloro(dimethylsulfide)ethylenediamineplatinum(*IV*)

Trichloro(1,2-*ethanediamine*-N,N′)[*thiobis*(*methane*)]*platinum*(1+), *9CI*

[60927-58-4]



M 423.6 (ion)

Unusual example of Pt(*IV*) with S donor ligand. Synth. from chlorination of $[PtCl(en)(SMe_2)]^{\oplus}$. SEt_2 analogue also known.

Chloride: [58103-83-6].
$C_4H_{14}Cl_4N_2PtS$ M 459.1
White (?) cryst. Sol. H_2O.

Kukushkin, Yu.N. *et al*, *Russ. J. Inorg. Chem.* (*Engl. Transl.*), 1975, **20**, 1728.

IC-004298

$C_4H_{14}Cl_4O_2P_2Ti$

Tetrachlorobis(dimethylphosphine oxide-*O*)titanium(*IV*), 11CI

Titanium(IV) *chloride bis(dimethylphosphine oxide)*

$(Me_2HPO)_2TiCl_4$

M 345.7

Octahedral.

cis-form [93556-83-3]
Synth. from $TiCl_4$ + Me_2HPO.

Muratova, A.A. *et al*, *Zh. Obshch. Khim.*, 1984, **54**, 1745; *CA*, **102**, 6730j (*synth, ir*)

IC-004299

$C_4H_{14}CoO_8$

Bis(acetato-*O*)tetraaquacobalt, 10CI

Diacetatotetraaquacobalt(II). *Cobaltous acetate tetrahydrate*

[19621-58-0]

$Co(OAc)_2(OH_2)_4$

M 249.0

trans-Octahedral with Co—OH_2 211, 206, Co—O 212 pm. Isomorphous with corresp. nickel acetate complex. Pinkish red cryst. Loses H_2O at 140°.

[59091-75-7]

Van Nickerk, J.N. *et al*, *Acta Crystallogr.*, 1953, **6**, 609 (*cryst struct*)

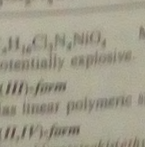
Dichlorobis(ethylenediamine)palladium(*IV*)(2+)



trans-form

M 297.5 (ion)
Generally obt. with *trans*-geometry. Simple salts unstable, cation more stable in mixed valence compds.
Diperchlorate: [36245-59-7].
Light yellow-green cryst.
Dinitrate, double salt with $[Pd(en)_2](NO_3)_2$: Synth. from $[Pd(en)_2]Cl_2$ and HNO_3. Dark green cryst. Previously formulated as simple nitrate.
Diperchlorate, double salt with $[Pd(en)_2](ClO_4)_2$: [73857-02-0].
Synth. from $[Pd(en)_2]Cl_2$, $HClO_4$ and Cl_2. Green cryst. with metallic lustre (cold aq. $HClO_4$). Solid, but not soln., shows strong absorption in visible region due to charge transfer from Pd(*II*) to Pd(*IV*) along Pd(*II*)...Cl...Pd(*IV*).

Absolute configuration

cis-Λ (−)-form

M 271.1 (ion)
Spontaneous resoln. occurs in *cis*-form on slow cryst. from H_2O.

cis-Λ(−)-form [18660-78-1]
Bromide: [15352-27-9].

Air-stable orange cryst. $[\alpha]_D$ −44° (0.5% H_2O in a 2-dm tube). Less sol. H_2O than racemate.

cis-Δ(+)-form [28074-44-4]
Bromide: [21350-93-6].
$[\alpha]_D$ +44°.
Chloride: [51321-44-9].

cis-(±)-form [20956-35-8]
Converts to *trans*-form on heating in soln.
Nitrite: Brown cryst.
Nitrate: Golden yellow needles (H_2O at <60°). Sol. H_2O (1.2 g per 100 cm^3 at 22°).

trans-form
Nitrate: [14240-12-1].
Air-stable, yellow cryst. (H_2O). Sol. H_2O (2.2 g per 100 cm^3 at 22°).
Iodide: [19636-81-8].
Cryst. Dec. at 209-218°.

[42570-69-4]

trans-form

M 263.1 (ion)
cis and *trans* isomers known. *cis*-form is optically active and has been resolved.

cis-form [24996-37-0]
Distorted octahedral config. about Co with linear N_3 groups. Co—NN 197; Co—NC 200 pm. Salts are red.
Chloride: [68265-39-4].
Red.
Bromide: [15275-20-4].
Red cryst. Ir δ_{N_3} 677, 657 cm^{-1} (nujol).
Iodide: [79270-30-7].
Cryst.
Perchlorate: [14877-87-3].
Dark red cryst. Ir ν_{N_3} 2075, 2028 cm^{-1} (nujol).
Nitrate: [22651-44-1].
Deep red cryst. Ir ν_{N_3} 2024, 2022 cm^{-1} (nujol).
Azide: [42863-01-4].
Synth. in 1:1 mixt. with *trans* isomer. Cryst.

cis-Δ-form [39502-33-5]
$(+)_D$-cis-*form*
Kindred *et al* dispute this assignment, and propose that Λ is the $(+)_D$ form.
Perchlorate: [61542-81-2].
Red-violet fine cryst. (H_2O). $[\alpha]_D$ +237° ; $[\alpha]_{546}$ −962°.

cis-Λ-form [56906-68-4]
$(-)_D$-cis-*form*
Perchlorate: Cryst. (hot H_2O). $[\alpha]_+$°, −237; $[\alpha]_{546}$ +962°.

trans-form [24996-36-9]
Salts are purple.
Perchlorate: [14781-34-1].
Brown-purple cryst. Ir ν_{N_3} 2020 cm^{-1} (nujol).
Azide: [42863-02-5].
Synth. in 1:1 mixt. with *cis* isomer. Cryst.

Octahedral anion.

cis-form [22432-37-7]
Iodide: [15444-78-7].
Starting material for compds. *cis*-$[Cr(en)_2FX]I$, X = $Cl^{\ominus}$, $Br^{\ominus}$, $NCS^{\ominus}$, H_2O, NH_3. Pink solid + H_2O (aq. HI/EtOH). More sol. than *trans*-complex. This salt has been resolved into its Λ and Δ forms.
Perchlorate: [59765-96-7].
Synth. from *cis*-$[Cr(en)_2F_2][Cr(en)F_4]$ + 6*M* $HClO_4$ and H_2O. Solid. Sol. H_2O.
(*Ethylenediamine*)*tetrafluorochromate*(III) *salt:* see (*Ethylenediamine*)*tetrafluorochromate*(III)(*1−*), *IC-003290*

trans-form [24407-74-7]
Chloride: [19581-00-1].
Synth. from $CrCl_3.6H_2O$, HF and aq. ethylenediamine. Orange red cryst. (H_2O). Sol. H_2O.
Perchlorate: [19581-04-5].
Synth. from *trans*-$[CrPy_4F_2]ClO_4$ and ethylenediamine heated under reflux. Bright red cryst. (H_2O or 0.1*M* $HClO_4$).
Bromide: [19581-01-2].
Red(?) cryst. (H_2O). Sol. H_2O.

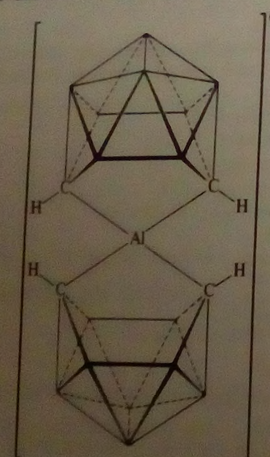
$C_4H_{20}AlB_{16}^{\ominus}$

Bis(6,9-dicarbadecaborane(12)-6,9-diyl)aluminate(1−)



M 268.1 (ion)

Na salt: [106006-55-7].

Pale-yellow microcryst. Mod. stable in dry air. Mp >300°. Ir ν_{B-H} 2543 cm^{-1}.

Bis(triphenylphosphine)iminium salt: [106006-57-9].

White cryst., stable in dry air. Reacts slowly with water, faster with wet Me_2CO. Sol. CH_2Cl_2. Mp >300°.

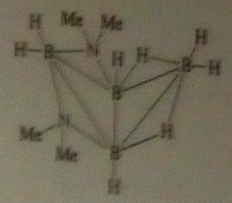
Schubert, D.M. *et al, Organometallics*, 1987, **6**, 203 (*synth, cryst struct, ir, pmr, B-11 nmr*)

IC-004442

$C_4H_{20}B_4N_2$

Bis(μ-dimethylamino)tetraborane(10)

[108083-02-9]



M 139.4

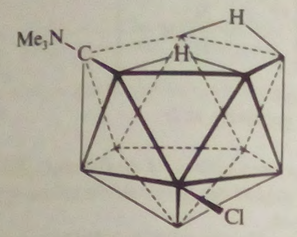
Air-sensitive clear liq. Sol. CH_2Cl_2. Mp −4° to −3°. Stable when neat, dec. slowly in soln.

Gaines, D.F. *et al, Inorg. Chem.*, 1988, **27**, 1839 (*synth, ir, pmr, B-11 nmr, ms*)

IC-004443

$C_4H_{20}B_{10}ClN$

4-Chloro-7-trimethylamine-7-carbaundecaborane(14)



M 225.7

nido-. Colourless solid. Sol. CH_2Cl_2, MeCN.

Khan, S.A. *et al, J. Chem. Soc., Dalton Trans.*, 1990, 2503 (*synth, pmr, B-11 nmr, ms*)

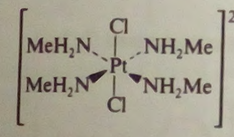
IC-004444

$C_4H_{20}Cl_2N_4Pt^{2\oplus}$

Dichlorotetrakis(methylamine)platinum(*IV*)(2+), 8CI

Dichlorotetrakis(methanamine)platinum(2+), 9CI

[21430-86-4]



M 390.2 (ion)

***trans*-form** [29484-86-4]

Dichloride: [49815-97-6].

$C_4H_{20}Cl_4N_4Pt$ M 461.1

Yellow solid. Sol. Me_2CO.

Tetrakis(methylamine)platinum(2+) double salt, tetraperchlorate: [102533-49-3].

$C_8H_{40}Cl_6N_8O_8Pt_2$ M 979.3

Yellow-orange or orange-red solid. Has stacked structure and mixed-valence properties.

[53406-73-8]

Inorg. Synth., 1974, **15**, 93 (*synth*)

Clark, R.J.H., *J. Chem. Soc., Dalton Trans.*, 1986, 403 (*synth, struct, uv, raman*)

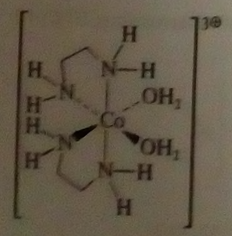
IC-004445

$C_4H_{20}CoN_4O_2^{3\oplus}$

Diaquabis(ethylenediamine)cobalt(*III*)(3+)

Bis(ethylenediamine)diaquacobalt(III)(3+)

[21242-06-8]



Λ-cis-form

M 215.1 (ion)

Octahedral. Subject of many kinetic studies on substitutions. Other salts known.

Λ-cis-form [18485-07-9]

Trinitrate: Red cryst. $[\alpha]_{546.1}$ −300°.

(±)-cis-form [21247-59-6]

Trinitrate: [16300-52-0].

Red.

trans-form [23523-26-4]

Trinitrate: [17967-05-4].

M 320.6 (ion)
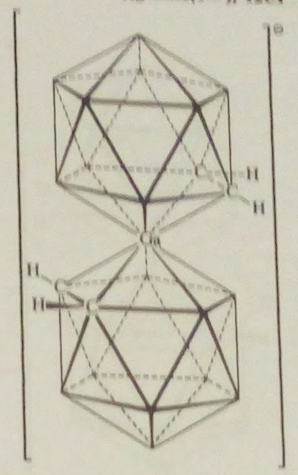
Diamagnetic.
Bis-Me_4N salt: Deep-pink cryst. (Me_2CO/toluene).

Hawthorne, M.F. *et al, J. Am. Chem. Soc.*, 1968, **90**, 879 (*synth, ir, pmr, nmr, uv*)

$C_4H_{22}B_{18}Ga^{\ominus}$ IC-004468

Bis[(7,8,9,10,11-η)-undecahydro-7,8-dicarbaundecaborato(2−)]gallate(1−), 12CI



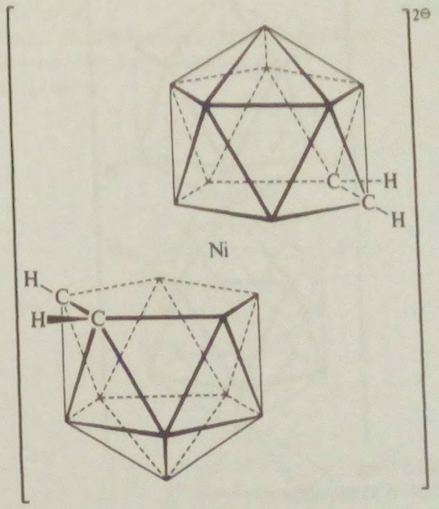
M 334.5 (ion)
commo-.
Tl(I) salt: [119769-33-4].
$C_4H_{22}B_{18}GaTl$ M 538.9
Colourless cryst. (toluene/heptane). Sol. toluene; insol. heptane.

Bandman, M.A. *et al, Inorg. Chem.*, 1989, **28**, 1204 (*synth, ir, pmr, B-11 nmr, ms, cryst struct*)

$C_4H_{22}B_{18}Ni^{2\ominus}$ IC-004469

Bis[(7,8,9,10,11-η)-undecahydro-7,8-dicarbaundecaborato(2−)]nickelate(2−), 9CI

[36733-09-2]



M 323.5 (ion)
Bis-Me_4N salt: Pale-brown needles. Extremely air-sensitive.

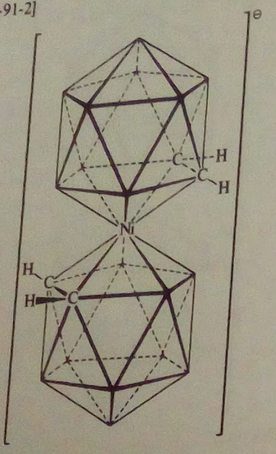
Hawthorne, M.F. *et al, J. Am. Chem. Soc.*, 1968, **90**, 879 (*synth, ir, pmr*)
Wing, R.M., *J. Am. Chem. Soc.*, 1968, **90**, 4828 (*struct*)
Pavlik, I. *et al, CA*, 1976, **85**, 93221 (*pe*)

IC-004470

$C_4H_{22}B_{18}Ni^{\ominus}$

Bis[(7,8,9,10,11-η)-undecahydro-7,8-dicarbaundecaborato(2−)]nickelate(1−), 9CI

[51159-91-2]



M 323.5 (ion)

Rb salt: Green-black lustrous cryst.

Me_4N salt: [51159-92-3].
Yellow-brown solid. Mp >300°.

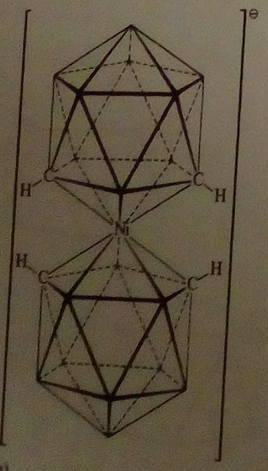
Hawthorne, M.F. *et al, J. Am. Chem. Soc.*, 1968, **90**, 879 (*synth, ir, pmr*)

Hansen, F.V. *et al, Acta Chem. Scand.*, 1973, **27**, 1210 (*struct*)

IC-004471

$C_4H_{22}B_{18}Ni^{\ominus}$

Bis[(7,8,9,10,11-η)-undecahydro-7,9-dicarbaundecaborato(2−)]nickelate(1−), 9CI



M 323.5 (ion)
Postulated struct. shown.

Rb salt: [42443-78-7].
No phys. details recorded.

Me_4N salt: Olive-green cryst. (Me_2CO aq.). Mp >300°.

Hawthorne, M.F. *et al, J. Am. Chem. Soc.*, 1968, **90**, 862, 879 (*synth, ir, pmr*)

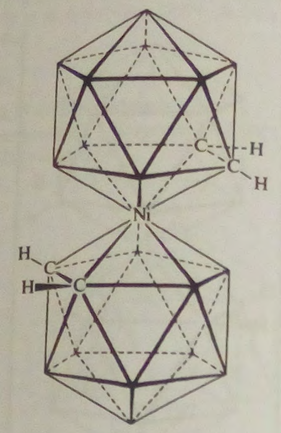
Pont, L.O. *et al, Inorg. Chem.*, 1974, **13**, 483 (*pe*)

IC-004472

$C_4H_{22}B_{18}Ni$

Bis[(7,8,9,10,11-η)-undecahydro-7,8-dicarbaundecaborato(2−)]nickel, 9CI

[36548-57-7]



M 323.5
Air-stable orange cryst. Sol. most org. solvs. Subl. 150° *in vacuo*. Dec. at ~265°.

Hawthorne, M.F. *et al, J. Am. Chem. Soc.*, 1968, **90**, 879 (*synth, ir, pmr*)

St Clair, D. *et al, J. Am. Chem. Soc.*, 1970, **92**, 1173 (*struct*)

Tetrakis(thiocyanato-*S*)mercurate(2−)

Tetrathiocyanatomercurate(2−)

[17845-33-9]

$[Hg(SCN)_4]^{2\ominus}$

M 432.9 (ion)

Di-K salt: [14099-12-8].
Cryst.

Di-K, bis-dibenzo-18-crown-6 complex, EtOH solvate: [120062-65-9].
Cryst.

K, bis(ethylenedithio)tetrathiafulvalene salt: [123341-38-8].
Metallic down to 1.5K. Cryst. Struct. comprises alternate stacks of 2D network of (BEDT-TTF) units and of $[KHg(SCN)_4]^{\ominus}$ anions.

Di-Rb salt: [52139-49-8].
Cryst.

Di-Cs salt: [29993-48-4].
Cryst.

Sr salt, trihydrate: [86525-95-3].
Cryst. Tetrahedral $Hg(SCN)_4$ and tricapped trigonal prismatic Sr (latter coord. to 4N + 5O).

Diaquacobalt(2+) salt, bis-2-pyrrolidinone complex: [110219-65-3].
Cryst. Struct. comprises polymeric chains of $[Hg(SCN)_4(H_2O)_2Co]$ with tetrahedral $Hg(SCN)_4$, octahedral Co [4*N*CS + $2OH_2$] and *trans* bridging CNS. 2-Pyrrolidinone groups are merely H-bonded to H_2O.

*Bis(dimethyl sulfoxide-*O*)cobalt(2+) salt:* [117355-43-8].
Cryst. Tetrahedral Hg and octahedral Co [2O (*trans*) + 4*N*CS].

Di-NH_4 salt: Cryst.

M 207.9 (ion)

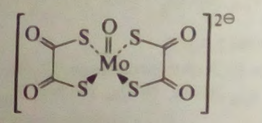
Tetra-Na salt: [67202-63-5].
$C_4MoNa_4O_4$ M 299.9
Used to synth. organometallics. Orange-yellow powder, best used *in situ*. Insol. THF, HMPA, liq. NH_3. Ir ν_{CO} 1680w, 1471s,br cm^{-1} (silicone mull).
▷ Extremely pyrophoric, reacting explosively with fluorolube, water or air. Deflagrates on percussion.

Lin, J.T. *et al, J. Am. Chem. Soc.*, 1983, **105**, 2296 (*synth, ir, haz, use*)

IC-004536

$C_4MoO_5S_4^{2\ominus}$

Bis(1,2-dithiooxalato)oxomolybdate(*IV*)(2−)
Bis[ethanebis(thioato)(2−)-S,S′]oxomolybdate(IV)(*2−*), *10CI*



M 352.2 (ion)
Square pyramidal.

Di-Cs salt: [71147-32-5].
Cryst. + $1H_2O$.

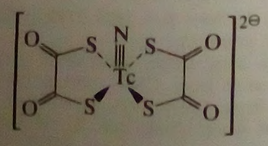
[71214-18-1]

Mennemann, K. *et al, J. Chem. Res. (M)*, 1979, 1372 (*cryst struct, synth, ir*)

IC-004537

$C_4NO_4S_4Tc^{2\ominus}$

Bis(dithiooxalato)nitridotechnetate(*V*)(2−)
Bis[ethanebis(thioato)(2−)-S,S′]nitridotechnetate(V)(*2−*), *12CI*



M 353.2 (ion)

Square-pyramidal anion. Synth. from $TcNCl_4^{\ominus}$ and potassium dithiooxalate. Oxidised and dec. by Cl_2 to give $TcNCl_4^{\ominus}$.

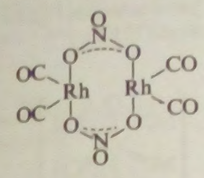
Bis-Ph_4As salt: [117063-57-7].
Pale purple solid. Mp *ca.* 215° dec. Exists in triclinic and monoclinic forms.

Colmanet, S.F. *et al, Inorg. Chim. Acta*, 1988, **147**, 173 (*synth, ir, cryst struct*)
Baldas, J. *et al, J. Nucl. Med.*, 1989, **30**, 1240 (*hplc, biodistrib*)
Abram, U. *et al, Inorg. Chim. Acta*, 1990, **169**, 49 (*synth, uv, esr, cryst struct*)

IC-004538

$C_4N_2O_{10}Rh_2$

Bis(nitrato)tetracarbonyldirhodium
Bis-μ-nitratobis[dicarbonylrhodium]



M 441.8
Moisture-sensitive, purple solid by subl. Mp 100-105° dec. Subl. 80° *in vacuo*. Ir ν_{CO} 2123vs, 2081m, 2037vs, 2000s, 1992m cm^{-1} (nujol).

Lawson, D.N. *et al, J. Chem. Soc.*, 1965, 1900 (*synth, ir*)

IC-004539

$C_4N_4Ni^{4\ominus}$

Tetrakis(cyano-*C*)nickelate(4−), 9CI
Tetracyanonickelate(0)(*4−*)

[59471-59-9]

$[Ni(CN)_4]^{4\ominus}$

M 162.7 (ion)
Assumed tetrahedral struct. Synth. from $[Ni(CN)_4]^{2\ominus}$ + K in NH_3(l). V. reducing; converts H_2O to H_2. Some $CN^{\ominus}$ easily replaced by CO, PR_3 etc.

Tetra-K salt: [15321-21-8].
$C_4K_4N_4Ni$ M 319.1
Yellow solid.

Eastes, J.W. *et al, J. Am. Chem. Soc.*, 1942, **64**, 1187 (*synth*)
de Haas, K.S. *et al, Inorg. Chim. Acta*, 1977, **24**, 269 (*ir, uv*)
Compr. Coord. Chem., Pergamon, Oxford, 1987, **5**, 6,7.

IC-004540

$C_4N_4Ni^{3\ominus}$

Tetrakis(cyano-*C*)nickelate(3−), 9CI
Tetracyanonickelate(I)(*3−*)

[42985-62-6]

$[Ni(CN)_4]^{3\ominus}$

M 162.7 (ion)
Paramagnetic. Struct. unknown. Prepd. from Tetrakis(cyano-*C*)nickelate(2−), IC-004541 and N_2H_4 in alkali.

Tri-K salt:
$C_4K_3N_4Ni$ M 280.0
Bright red solid.

Nast, R. *et al, Z. Naturforsch., B*, 1954, **9**, 798 (*synth, magnetism*)

IC-004541

$C_4N_4Ni^{2\ominus}$

Tetrakis(cyano-*C*)nickelate(2−), 9CI
[15453-80-2]

$[Ni(CN)_4]^{2\ominus}$ (D_{4h})

M 162.7 (ion)
▷ Toxic. Mutagenic.

Di-Na salt: [14038-85-8].
Catalyst for alkyne hydrogenation, hydrocyanation and hydrogenation-rearrangement of butene. Catalyst for vat dye printing. Transparent yellow-orange hexagonal prisms or needles + $3H_2O$ (H_2O). Sol. H_2O. Dehydrates at 110°.
Di-K salt: [14220-17-8].
Used in indirect complexometric titration determination of silver, and titrimetric determination of phosphorus. Catalyst in polymerisation of vinyl compds. Red-orange cryst. + $1H_2O$ (H_2O). V. sol. H_2O. Monohydrate dehydrates at 100°. Dec. in mineral acid.
▷ QR8650000.

Bis(tetrabutylammonium) salt: [21518-38-7].
Catalyst in ethylene polym.

[14323-41-2, 15453-80-2, 19554-32-6, 48042-08-6]

Inorg. Synth., 1946, **2**, 227 (*synth*)

IC-004542

$C_4N_4Ni^{\ominus}$

Tetrakis(cyano-*C*)nickelate(1−)
Tetracyanonickelate(III)(*1−*), *8CI*

[53557-21-4]

$[Ni(CN)_4]^{\ominus}$

M 162.7 (ion)
Formed by radiolysis of solns. Tetrakis(cyano-*C*) nickelate(2−), IC-004541.

Mulazzini, Q.J. *et al, Int. J. Radiat. Phys. Chem.*, 1974, **6**, 87.
Symons, M.C.R. *et al, J. Chem. Soc., Dalton Trans.*, 1979, 1744 (*esr*)

IC-004543

$C_4N_4NiO_4^{2\ominus}$

Tetrakis(cyanato-*N*)nickelate(2−), 9CI
Tetracyanatonickelate(II)(*2−*), *8CI*

[16338-18-4]

$[Ni(NCO)_4]^{2\ominus}$

M 226.7 (ion)
Tetrahedral. Paramagnetic.

Bis-Et_4N salt:
$C_{20}H_{40}N_6NiO_4$ M 487.2
Deep blue solid. Sol. $MeNO_2$, $PhNO_2$, Me_2CO/Et_2O. Mp 219°.
Bis-Ph_4As salt: Blue cryst. Sol. $MeNO_2$, $PhNO_2$. Mp 173-174°.

[17857-25-9]

Forster, D. *et al, J. Chem. Soc.*, 1964, 2790; 1965, 262 (*synth, uv, ir, elec cond, magnetism*)

IC-004545

$C_4N_4NiSe_4^{2\ominus}$

Tetrakis(selenocyanato-*N*)nickelate(2−), 12CI

Tetraisoselenocyanatonickelate(II)(2−)

[30908-80-6]

$[Ni(NCSe)_4]^{2\ominus}$

M 478.6 (ion)

Octahedral struct. suggested, with coordination to neighbouring SeCN groups, forming polymeric struct.

[1,4-Phenylenebis(methylene)]bis[triphenylphosphonium](2+) salt:

$C_{68}H_{56}N_4NiP_2Se_4$ M 1107.3

Yellow solid. Ir ν_{CSeN} 2145m, 2092vs, 2075s; ν_{CSe} 653vw; ν_{NiN} 237s cm^{-1} (nujol). Paramagnetic, μ_{eff} = 3.17μ_B (290K).

Bis[methylmercury(1+)] salt: [105832-91-5].

$C_6H_6Hg_2N_4NiSe_4$ M 909.8

Sky blue solid. Mp 186° dec. Ir ν_{CN} 2175s, 2110s; ν_{CSe} 590s, 520s cm^{-1}. Paramagnetic, μ_{eff} = 3.02 μ_B. Forms adducts with Py.

Bis[ethylmercury(1+)] salt: [105832-92-6].

$C_8H_{10}Hg_2N_4NiSe_4$ M 937.9

Sky blue solid. Mp 192° dec. Paramagnetic, μ_{eff} = 2.95μ_B. Ir ν_{CN} 2168s, 2125s; ν_{CSe} 578s, 530sh cm^{-1}. Adduct formed with Py.

Bis[propylmercury(1+)] salt: [105832-93-7].

$C_{10}H_{14}Hg_2N_4NiSe_4$ M 965.9

Sky blue solid. Mp 205° dec. Paramagnetic, μ_{eff} = 2.98μ_B. Ir ν_{CN} 2175, 2118; ν_{CSe} 610s,540s cm^{-1}. Adduct formed with Py.

μ-1,1′-Ferrocenediyldimercury(2+) salt: [115587-19-4].

$C_{14}H_8FeHg_2N_4NiSe_4$ M 1063.8

Light brown cryst. (Me_2CO/EtOH). Mp 154° dec. Paramagnetic, μ_{eff} = 3.01μ_B. Ir ν_{CN} 2165s, 2105sh, 2040s; ν_{CSe} 735s, 520s cm^{-1}. Adducts formed with Py, bipy, phen.

Tetracyanoplatinate(II)(2−)
[15004-88-3]

$[Pt(CN)_4]^{2\ominus}$

M 299.1 (ion)
Classic square planar complex. V. many salts known; colours varying with cations and degree of hydration. Properties v. much studied, particularly structs. and physical properties of salts with Pt cations and partially oxidised materials.
Di-K salt: [562-76-5].
$C_4K_2N_4Pt$ M 377.3
V. stable. Yellow-green needles + $3H_2O$. Yellow product can form; which is possibly the monohydrate. Several hydrates known.
Di-Cs salt: [15747-35-0].
$C_4Cs_2N_4Pt$ M 564.9
Blue-white cryst. + H_2O. Several hydrates known.
Ba salt: [562-81-2].
C_4BaN_4Pt M 436.4
Useful in synth. of partially oxidised $Pt(CN)_4^{2\ominus}$ salts. Has been used in fluorescent X ray screens. Yellow-green or colourless cryst. + $4H_2O$.
▷ Hazardous synth.

Tetracyanoplatinate(1.75−)
Part. oxidised-form
Representative formula for range of compds. with important chain structs. leading to 1-D electrical conductance. Other examples contain anions, eg. $K_2[Pt(CN)_4]Br_{0.3}.3.2H_2O$, sometimes known as Krogmann salts.
K salt (1:1.75):
$C_4K_{1.75}N_4Pt$ M 367.5
Bronze-coloured cryst. + 1.5 H_2O (H_2O). Loses H_2O easily.
Cs salt (1:1.75):
$C_4Cs_{1.75}N_4Pt$ M 531.7
Copper-brown needles + $2H_2O$. Loses H_2O easily.

[13755-32-3, 14323-36-5, 16457-34-4, 38245-27-1, 59831-03-7, 83018-11-5, 87826-97-3]

IC-004559

$C_4N_4PtS_4^{2\ominus}$

Tetrakis(thiocyanato-*S*)platinate(2−)
Tetrathiocyanatoplatinate(II)
[38668-99-4]

$[Pt(SCN)_4]^{2\ominus}$

M 427.4 (ion)
Ligand binds through S atoms, but linkage isomers found in CH_2Cl_2 soln. of $Bu_4N^{\oplus}$ salt.
Di-K salt: [14244-61-2].
$C_4K_2N_4PtS_4$ M 505.6
Red solid. Sol. H_2O.
▷ TP1870000.
Bis-tetrabutylammonium salt: [73297-67-3].
Red solid. Sol. polar org. solvs.

[17731-25-8]

IC-004563

$C_4N_4S_4U$

Uranium(*IV*) thiocyanate
Uranium tetrakis(thiocyanate)

$U(NCS)_4$

M 470.3
Has never been isol. as a solid. Stabilised as complex $U(NCS)_4(OH_2)_4$ molecules in crown-ether complex.
18-Crown-6 complex (1:1.5):
$C_{22}H_{36}N_4O_9S_4U$ M 866.8
Deep green cryst. 8-Coord. square antiprismatic at U.

Charpin, P. *et al, Inorg. Nucl. Chem. Lett.*, 1977, **13**, 341 (*synth, ir, uv, cryst struct*)

IC-004564

$C_4N_4Ti^{4\ominus}$

Tetrakis(cyano-*C*)titanate(4−), 10CI
Tetracyanotitanate(0)

$[Ti(CN)_4]^{4\ominus}$

M 151.9 (ion)
Tetra-K salt: [54836-64-5].
$C_4K_4N_4Ti$ M 308.3
Synth. by reducing mixt. of $TiBr_3$ and KCN with K in liq. NH_3. Black solid; readily oxidised and hydrol. Paramagnetic, $\mu_{eff} = 2.17\mu_B$, g = 1.993.
▷ Pyrophoric in air. Cyanides are toxic.

Nicholls, D. *et al, Inorg. Chim. Acta*, 1980, **41**, 233 (*synth, ir, uv-vis, magnetism*)

IC-004565

$C_4N_4Ti^{2\ominus}$

Tetrakis(cyano-*C*)titanate(2−), 10CI
Tetracyanotitanate(II)

$[Ti(CN)_4]^{2\ominus}$

M 151.9 (ion)
Octahedral polymer.
Di-K salt: [75038-71-0].
$C_4K_2N_4Ti$ M 230.1
Synth. by reduction of $K_3Ti(CN)_6$ with K in liq. NH_3. Black solid. Readily hydrol. in aq. NH_3 yielding $Ti(OH)_2$, then $Ti(OH)_3$. Paramagnetic, $\mu_{eff} = 1.19\mu_B$.

Nicholls, D. *et al, Inorg. Chim. Acta*, 1980, **41**, 233 (*synth, ir, uv-vis, magnetism*)

IC-004566

C_4N_4Ti

Titanium(*IV*) cyanide ($Ti(CN)_4$), 10CI
Tetracyanotitanium(IV). *Titanium tetracyanide. Tetrakis(cyano-C)titanium*
[67847-25-0]

$Ti(CN)_4$

M 151.9
Synth. analogous to Zirconium(*IV*) cyanide ($Zr(CN)_4$), IC-004569. Brown solid. Insol. common org. solvs.

Gorsi, B.L. *et al, J. Indian Chem. Soc.*, 1978, **55**, 321 (*synth, ir*)

IC-004567

$C_4N_4V^{2\ominus}$

Tetrakis(cyano-*C*)vanadate(*II*)(2−), 11CI
Tetracyanovanadate(II)(2−)

$[V(CN)_4]^{2\ominus}$

M 155.0 (ion)
Di-K salt: [82728-69-6]. *Potassium tetracyanovanadate*(II) ($K_2V(CN)_4$)
$C_4K_2N_4V$ M 233.2
Synth. by oxidising K salt of Bis(cyano-*C*) vanadate(2−), IC-003487 with NH_4CN in liq. NH_3. Pale purple solid. Paramagnetic; $\mu_{eff} = 3.2\mu_B$.
▷ Toxic.

Dodsworth, E.S. *et al, Inorg. Chim. Acta*, 1982, **61**, 9 (*synth, magnetism, ir, uv-vis*)

IC-004568

$C_4N_4Zr^{2\ominus}$

Tetrakis(cyano-*C*)zirconate(*II*)(2−), 11CI
Tetracyanozirconate(II)

$[Zr(CN)_4]^{2\ominus}$

M 195.2 (ion)
Di-K salt: [93293-91-5].
$C_4K_2N_4Zr$ M 273.4
Synth. from $K_2Zr(CN)_6$ and NH_4CN in liq. NH_3. Mauve solid. Paramagnetic, $\mu_{eff} = 2.75\mu_B$ (293K).
▷ Cyanides are toxic.

Dodsworth, E.S. *et al, Inorg. Chim. Acta*, 1984, **89**, 143 (*synth, ir, uv/vis, magnetism*)

IC-004569

C_4N_4Zr

Zirconium(*IV*) cyanide ($Zr(CN)_4$), 10CI
Tetracyanozirconium(IV). *Zirconium tetracyanide. Tetrakis(cyano-C)zirconium*
[67847-26-1]

$Zr(CN)_4$

M 195.2
Synth. by reaction of $Zr[OCH(CH_3)_2]_4$ with 4 H_3CCOCN. Blackish-brown solid. Sol. Me_2CO.
$Zr[OCH(CH_3)_2]_n(CN)_{4-n}$ ($n = 1 - 4$) can be isol. by changing the ratio of reactants.
Diammine complex: [97396-33-3]. *Diamminetetrakis(cyano-C)zirconium, 11CI*
$C_4H_6N_6Zr$ M 229.3
Synth. from $ZrBr_4.2NH_3$ + NH_4CN in liq. NH_3.

Gorsi, B.L. *et al*, *J. Indian Chem. Soc.*, 1978, **55**, 321 (*synth, ir*)
Boyle, E.L. *et al*, *Inorg. Chim. Acta*, 1985, **100**, 281 (*synth, diammine complex*)

IC-004570

$C_4N_5Re^{2\ominus}$

Nitridotetracyanorhenate(V)(2−)

Tetraisocyanonitridorhenate(V)(2−), 8CI

$[NRe(CN)_4]^{2\ominus}$

M 304.2 (ion)

Di-K salt: $C_4K_2N_5Re$ M 382.4
Synth. from $ReNCl_2(PPh_3)_2$ and KCN. Yellow solid + $1H_2O$. Precipitated from aq. soln. by MeOH as salmon-pink cryst.

Johnson, N.P., *J. Chem. Soc. A*, 1969, 1843 (*synth, ir, uv*)
Davies, W.O. *et al*, *J. Chem. Soc., Chem. Commun.*, 1969, 736 (*cryst struct*)

IC-004571

$C_4N_5S_4Tc^{2\ominus}$

Nitridotetrakis(thiocyanato-*N*)technetate(2−), 11CI

Tetraisothiocyanatonitridotechnetate(V)(2−)

$[TcN(NCS)_4]^{2\ominus}$

M 345.2 (ion)
Thiocyanate N-bonded by implication. Synth. from $TcNCl_4^{\ominus}$ and KNCS.

Bis-tetrabutylammonium salt: [108089-79-8].
Orange brown solid. Mp 114-116°.

Bis-Ph_4As salt: [103948-33-0].
Orange-red solid. Mp 81-85°.

Abram, U. *et al*, *Z. Chem.*, 1986, **26**, 140 (*synth, ir, uv*)
Abram, U. *et al*, *Z. Anorg. Allg. Chem.*, 1987, **544**, 167 (*synth, esr*)

IC-004572

$C_4N_{10}Pt^{2\ominus}$

Diazidotetrakis(cyano-*C*)platinate(2−), 10CI

Diazidotetracyanoplatinate(IV)

As Dibromotetrakis(cyano)platinate(2−), IC-003817 with

$X = N_3$

M 383.1 (ion)
trans-Structure.

▷ Azides are potentially explosive.

***trans*-form** [66901-76-6]
Irradiation of solns. gives N_2 and $[Pt(CN)_4]^{2\ominus}$, but solns. in EtOH may produce rare N_3 radicals.

Di-K salt: Orange cryst. Sol. H_2O, polar org. solvs.

Volger, A. *et al*, *Angew. Chem., Int. Ed. Engl.*, 1978, **17**, 524 (*ir, uv-vis*)
Weber, W. *et al*, *Inorg. Chim. Acta*, 1986, **111**, 129 (*synth*)

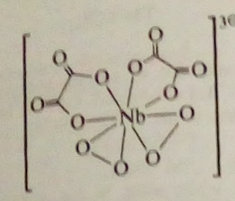
$C_4NbO_{12}^{3\ominus}$

IC-004573

Bis(oxalato)bis(peroxo)niobate(V)(3−)

Bis[ethanedioate(2−)-O,O']diperoxyniobate(V)(3−), 10CI

[55992-16-0]



M 332.9 (ion)
Dodecahedral.

Tris-NH_4 salt: [80004-95-1].
Synth. from oxalic acid and $(NH_4)_3Nb(O_2)_4$ in H_2O.
Yellowish-green solid.

Tris-NH_4 salt, monohydrate: [23388-20-7].
Cryst. (H_2O).

Mathern, G. *et al*, *Acta Crystallogr., Sect. B*, 1971, **27**, 1572 (*synth, cryst struct*)
Shchelokov, R.N. *et al*, *Russ. J. Inorg. Chem.* (*Engl. Transl.*), 1972, **17**, 2433 (*synth, ir*)

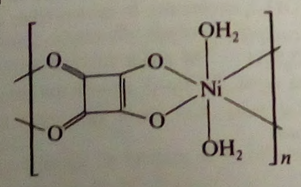
IC-004574

C_4NiO_4

Nickel(II) squarate

[3,4-Dihydroxy-3-cyclobutene-1,2-dionato(2−)-O^3,O^4]nickel(II), 11CI. (Dihydroxycyclobutenedionato)nickel, 8CI

[33684-90-1]



dihydrate

M 170.7

Dihydrate: Diaqua[3,4-dihydroxy-3-cyclobutene-1,2-dionato(2−)-O^3,O^4]nickel(II)
$C_4H_4NiO_6$ M 206.7
Green powder. Nickel ion bound to two H_2O and chelated to two squarate ions. Proposed struct. is a chain polymer.

West, R. *et al*, *J. Am. Chem. Soc.*, 1963, **85**, 2589 (*synth, ir*)

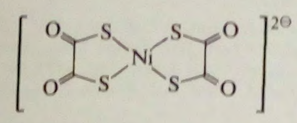
$C_4NiO_4S_4^{2\ominus}$

IC-004576

Bis(dithiooxalato)nickelate(II)(2−), 8CI

Bis[ethanebis(thioato)-S,S']nickelate(II)(2−), 11CI, 9CI

[18443-71-5]



M 298.9 (ion)
Square planar struct. *O* atoms also bond to other metal atoms, e.g. Pd.

red-form
Major form. Useful starting material for range of bimetallic $(C_2S_2O_2)_2$ complexes.

Di-K salt: [25360-81-0].
$C_4K_2NiO_4S_4$ M 377.1
Dark red cryst. (hot H_2O). Sol. hot H_2O, spar. sol. cold H_2O. Early work on dimorphism reports needles when soln. is rapidly cooled to 10° and octahedra if cooled only to 22°. Transition temp. 20°.

black-form
K salt: Formed from red form on heating in dilute $K_2Cr_2O_7$ soln. Glittering black cryst. Struct. comprises stacked anions and linear chains of K.

[43030-52-0, 49871-88-7]

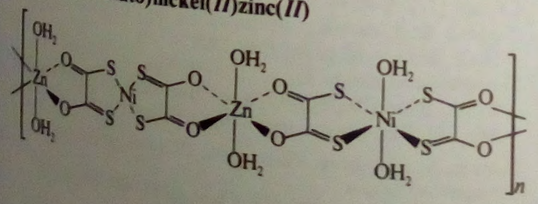
$C_4NiO_4S_4Zn$

IC-004577

Bis(dithiooxalato)nickel(II)zinc(II)



M 364.3 *Hydrate*

Hydrate consists of infinite parallel straight chains of Zn and 4% of the Ni atoms octahedrally coordinated, the rest of the Ni atoms have sq. planar coordination. Thus the system is weakly paramagnetic and non-stoichiometric.

2.08 Hydrate: Synth. from $Zn(ClO_4)_2.6H_2O$ and $K_2Ni(S_2C_2O_2)_2$. Shining black cryst. $\mu_{eff} = 1.02\mu_B$.

Maury, F. *et al*, *Compt. Rend. Hebd. Seances Acad. Sci. Sect. C*, 1980, **291**, 49 (*synth, cryst struct, deriv*)

C_4NiS_4

IC-004578

Tetrakis(thiocarbonyl)nickel

Tetrakis(carbonothioyl)nickel, 9CI. Nickel thiocarbonyl

[51062-92-1]

$Ni(CS)_4$ (T_d)

M 234.9
Characterised spectroscopically.

Yarbrough, L.W., *J. Chem. Soc., Chem. Commun.*, 1973, 705 (*ms, ir*)

C_4O

IC-004579

Carbon oxide (C_4O)

4-Oxo-1,2,3-butatriene-1-ylidene, 12CI. Tetracarbon monoxide

[112022-61-4]

$:C{=}C{=}C{=}C{=}O$

M 64.0
Triplet ground state. Formed by the vaporisation of graphite (laser heating) in CO/Ne. Known only in a Ne or Ar matrix.

Van Zee, R.J. *et al*, *J. Am. Chem. Soc.*, 1988, **110**, 609 (*matrix isol, esr*)

C_4O_2

IC-004580

Carbon oxide (C_4O_2)

1,2,3-Butatriene-1,4-dione, 12CI. Tetracarbon dioxide

[51799-35-0]

$O{=}C{=}C{=}C{=}C{=}O$

M 80.0
Prob. has triplet ground state. Formed by flash pyrolysis of cyclic diazoketones with matrix isol. Stable in matrix. Dec. by hv to C_3O and CO.

Maier, G. *et al*, *Angew. Chem., Int. Ed. Engl.*, 1990, **29**, 905 (*synth, ir, struct*)

$C_4O_4Os^{2\ominus}$

IC-004581

Tetracarbonylosmate(2−), 9CI

$[Os(CO)_4]^{2\ominus}$

M 302.2 (ion)
Usually generated and used *in situ*.

Di-Na salt: [27857-55-2].
$C_4Na_2O_4Os$ M 348.2
Air-sensitive cream-coloured cryst.

Collman, J.P. *et al*, *Inorg. Chem.*, 1974, **13**, 1 (*synth*)
Clark, W.J. *et al*, *Inorg. Chem.*, 1982, **21**, 3955 (*synth*)

C_4O_4Pd IC-004582

Tetracarbonylpalladium

Palladium carbonyl. 9CI. Palladium tetracarbonyl

[36344-80-6]

$Pd(CO)_4$

M 218.4

No physical data available, obt. by matrix isoln.

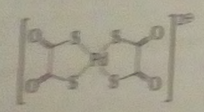
Darling, J.H. *et al. J. Chem. Soc., Dalton Trans.*, 1973, 1879 (synth, ir)

$C_4O_4PdS_2^{2\ominus}$ IC-004583

Bis(dithiooxalato)palladate(*II*)(2−)

Bis[ethanedithioato(2−)-S,S']palladate(2−)

[37378-58-8]



M 346.7 (ion)

Square planar.

Di-K salt: [60490-61-1].

Yellow trigonoidal cryst.

Bis-tetrabutylammonium salt: Yellow cryst. (aq. EtOH). Diamagnetic.

Bis-benzyltriphenylphosphonium salt: [50308-14-0].

Yellow cryst. Sol. $MeNO_2$, DMF. Mp 243-244°. Isomorphous with Ni analogue.

$C_4O_4Ru^{2\ominus}$ IC-004586

Tetracarbonylruthenate(2−), 9CI

$[Ru(CO)_4]^{2\ominus}$ (T_d)

M 213.1 (ion)

Di-Na salt: [57398-60-4].

$C_4Na_2O_4Ru$ M 259.0

Synth. by reducing $Ru_3(CO)_{12}$ in liq. NH_3 at −33° with Na metal. A versatile synthetic reagent, particularly for cluster synthesis. Reduces CO_2 to CO. Pale fawn, extremely air-sensitive solid. Sol. polar solvs. (MeOH, THF). Ir ν_{CO} 1940, 1898 cm^{-1} (THF); ν_{CO} 1930, 1887 cm^{-1} (MeOH).

$C_4O_4W^{4\ominus}$ IC-004587

Tetracarbonyltungstate(4−)

$[W(CO)_4]^{4\ominus}$

M 295.8 (ion)

Tetra-Na salt: [67202-46-4].

$C_4Na_4O_4W$ M 387.8

Used in synth. of organometallics. Pale-orange solid, best used *in situ*. Ir ν_{CO} 1679w, 1529s, 1478s,br cm^{-1} (silicone mull).

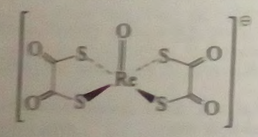
▷ Extremely pyrophoric, reacts explosively with fluorolube; may deflagrate.

Lin, J.T. *et al. J. Am. Chem. Soc.*, 1983, **105**, 2296 (*synth, ir, lsc, use*)

$C_4O_7ReS_4^{\ominus}$ IC-004588

Bis(1,2-dithiooxalato)oxorhenate(*V*)(1−)

Bis[ethanedithioato](2−)-S,S']oxorhenate(V)(1−), 10CI



M 442.5 (ion)

Square pyramidal. Re—S(mean) 233, Re=O 167.4 pm.

Cs salt: [77298-90-9].

Synth. from caesium dithiooxalate and $Cs_2[ReOCl_5]$ in H_2O. Brown-red cryst. (Me_2CO).

Tetrabutylammonium salt: [73396-07-3].

Synth. from $[Bu_4N][ReO_4]$ and potassium dithiooxalate in Me_2CO. Red-brown cryst. (Me_2CO aq.).

Davison, A. *et al. Inorg. Chem.*, 1980, **19**, 1988 (*synth, ir, uv, magnetism, props*)

Bis(oxalato)platinate(*II*)(2−), 8CI

Bis(ethanedioato)platinate(2−), 9CI

[36444-17-4]

As Bis(dithiooxalato)platinate(*II*), IC-004585 with

X = O

M 371.1 (ion)

Stacked struct. Particular interest in 1-D electrical conductance of many salts when partially oxidised (Krogmann's salts). Cations may be hydrated on complexed metals, $NH_4^{\oplus}$ or alkyl derivatives or other organic ions. Such complexes are colloquially known as KOP, MgOP, CoOP, etc.

K salt, dihydrate: [14244-64-5].

Yellow solid, becomes violet on partial oxidation.

▷ TT3780000.

Cu salt, 3.5 hydrate: [21136-03-8].

Red solid.

[35371-78-9, 40729-78-0]

Krogmann, K. *et al. Chem. Ber.*, 1966, **99**, 3402 (*synth*)
Compr. Coord. Chem., Pergamon, Oxford, 1987, **6**, 139 (*struct, props*)

C_4O_8Pu IC-004592

Plutonium(*IV*) oxalate

$Pu(C_2O_4)_2$

M 415.0

Dihydrate:

$C_4H_4O_{10}Pu$ M 451.1

Green cryst.

Dihydrate, Me_2CO solvate: Bright pink cryst. Obtd. by Me_2CO washing of dihydrate. Slowly dec. to dihydrate.

Hexahydrate: [74280-13-0].

$C_4H_{16}O_{18}Pu$ M 523.1

Yellow-green cryst. Insol. H_2O. Undergoes auto-radiolytic dec. to $PuOCO_3$. Isomorphous with U analogue.

Bis(urea) complex: [89743-21-5].

$C_6H_8N_4O_{10}Pu$ M 535.2

Cryst. + $2H_2O$.

$C_4O_8Ti^{\ominus}$ IC-004594

Bis(oxalato)titanate(*III*)(1−), 8CI

Bis[ethanedioato(2−)-O,O']titanate(III)(1−), 10CI

[31226-07-0]

$[Ti(C_2O_4)_2]^{\ominus}$

M 223.9 (ion)

Proposed struct. contains Ti chains with bridging oxalato groups. Salts may be used as the photosensitive layer in printed circuit board manuf.

K salt: [15655-84-2].

Synth. by dehydrating the dihydrate. Catalyses polyester formation. Paramagnetic; μ_{eff} = 1.64μ_B (292K), 1.53μ_B (80K).

K salt, dihydrate: [65900-51-8].
Synth. by adding oxalic acid and $TiCl_3$ to H_2O then adding $K_2C_2O_4$. Orange solid. Paramagnetic; μ_{eff} = 1.77μ_B (292K), 1.60μ_B (80K).

C_4O_8U IC-004595

Uranium(*IV*) oxalate

[63057-31-8]

$U(C_2O_4)_2$

M 414.0
Blue-violet cryst. Sl. sol. H_2O. Dec. above 400° to UO_2.

Dihydrate:
$C_4H_4O_{10}U$ M 450.0
Formed from hexahydrate at 110°. Cryst. Sl. sol. H_2O. Isomorphous with Th and Pu analogues.

Hexahydrate: [65665-14-7].
Pptd. when oxalic acid added to U(*IV*) soln. Air-stable green-yellow cryst. (dark green microcryst.). Sl. sol. H_2O, sol. hot conc. HCl. Sol. oxalates to form $U(C_2O_4)_4^{4\ominus}$. Loses $4H_2O$ at 110° or *in vacuo* at r.t. All H_2O lost at 200°. Isomorphous with Pu analogue.

Bis(oxalato)oxotitanate(*IV*)(2−)

Bis[ethanedioato(2−)-O,O′]oxotitanate(IV)(2−), *11CI*

M 239.9 (ion)
Square based pyramid. Various salts used in the manuf. of titanates for use as dielectrics, thermistors, ceramics and piezoelectric devices.

Di-K salt: [14481-26-6].
Catalyst for polym. of esters.

Ba salt: [14523-21-8].
C_4BaO_9Ti M 377.2
Synth. by adding EtOH soln. of oxalic acid to aq. $Ba(NO_3)_2/TiO(NO_3)_2$ soln. Starting material for manuf. of barium titanate. Forms a tetrahydrate.

Pb salt: [27111-57-5].
C_4O_9PbTi M 447.1
Synth. by adding $TiOCl_2$ and $PbCl_2$ to hot aq. $H_2C_2O_4$. Starting material for manuf. of lead titanate-based thermistors.

[14263-62-8]

Bis(oxalato)oxovanadate(*IV*)(2−)

Bis[ethanedioato(2−)-O,O′]oxovanadate(IV)(2−), *11CI*

[17569-94-7]

M 242.9 (ion)
Square pyramidal. Various alkali metal and alkaline earth metal salts may be synth. similarly. A number of hydrates also is known.

Di-Na salt: [82861-62-9].
Synth. by reduction of V_2O_5 by aq. $H_2C_2O_4$ + $Na_2C_2O_4$. Blue solid + $2H_2O$ (H_2O). This and the Li salt dec. to M_3VO_4 on heating (*cf.* Ba salt).

Ba salt: [65690-25-7].
Synth. by reducing V_2O_5 with aq. $H_2C_2O_4$ and adding a soluble Ba salt. Blue solid (H_2O). Dec. to $BaVO_3$ on heating in an inert atm.

Di-NH_4 salt: [82873-25-4].
Synth. from NH_4VO_3 with $H_2C_2O_4$ and aq. $(NH_4)_2C_2O_4$. Blue solid + $1H_2O$ (H_2O). Dec. on heating to V_2O_5.

$C_4O_9Zr^{2\ominus}$ IC-004598

Bis(oxalato)oxozirconate(*IV*)

Bis[ethanedioato(2−)-O,O′]oxozirconate(IV)(2−), *11CI*

M 283.2 (ion)
Various salts have been used to prepare $MZrO_3$ in high purity.

Ba salt: [42863-88-7].
Formed by metathesis of corresp. NH_4 salt. Forms thixotropic suspensions. White solid. Forms a number of hydrates.

Cd salt: [82930-15-2].
Synth. by adding aq. $ZrCl_4$ and $CdCl_2$ to hot aq. oxalic acid and precipitating with EtOH. White solid.

Bis-Pyridinium salt: [97059-19-3].
Synth. from aq. $ZrCl_4$ + PyHCl + oxalic acid. White solid.

Sharma, A.K. *et al, Thermochim. Acta*, 1982, **56**, 221; 1985, **93**, 101 (*synth, ir, thermal dec*)

$C_5BrIrN_5^{3\ominus}$ IC-004607

Bromopentakis(cyano-*C*)iridate(*III*)(3−)

Bromopentacyanoiridate(III)

$[Ir(CN)_5Br]^{3\ominus}$

M 402.2 (ion)

Tri-K salt: [42893-04-9].
Synth. from $[Ir(CN)_5H_2O]^{2\ominus}$ and KBr. Sol. H_2O.

Hexaamminecobalt(3+) salt: [42893-08-3].
$C_5H_{18}BrCoIrN_{11}$ M 563.3
Synth. from the K salt and $[Co(NH_3)_6]Cl_3$. Sol. H_2O.

Geoffroy, G.L. *et al, Inorg. Chem.*, 1974, **13**, 430 (*synth, ir, uv*)

C_5BrMnO_5 IC-004608

Bromopentacarbonylmanganese, 10CI, 9CI, 8CI

[14516-54-2]

$MnBr(CO)_5$ (C_{4v})

M 274.8

Synth. from $Mn_2(CO)_{10}$ and Br_2 in CS_2. Orange-yellow cryst. Mod. sol. org. solvs. $Subl._{0.05}$ 50°. Dimerises slowly in soln. with loss of CO.

Abel, E.W. *et al, J. Chem. Soc.*, 1959, 1501 (*synth, props*)

Chloropentakis(cyano-*C*)iridate(*III*)(3−)

Chloropentacyanoiridate(III)

$[Ir(CN)_5Cl]^{3\ominus}$ (C_{4v})

M 357.7 (ion)

Tri-K salt: [42893-03-8].
Synth. from $[Ir(CN)_5H_2O]^{2\ominus}$ and KCl. Appearance not descr. Sol. H_2O.

Hexaamminecobalt(3+) salt: [42893-09-4].
$C_5H_{18}ClCoIrN_{11}$ M 518.8
Synth. from the K salt and $[Co(NH_3)_6]Cl_3$. Appearance not descr. Sol. H_2O.

Geoffroy, G.L. *et al, Inorg. Chem.*, 1974, **13**, 430 (*synth, ir, uv*)

C_5ClMnO_5 IC-004619

Pentacarbonylchloromanganese, 10CI

Chloropentacarbonylmanganese

[14100-30-2]

$MnCl(CO)_5$ (C_{4v})

M 230.4

Synth. from $Mn_2(CO)_{10}$ and Cl_2 in CCl_4. Pale-yellow light-sensitive cryst. Mod. sol. org. solvs. Subl.$_{0.1}$ 40°. Dimerises slowly in soln. with loss of CO.

Abel, E.W. *et al*, *J. Chem. Soc.*, 1959, 1501 (*synth, props*)
Kaesz, H.D. *et al*, *J. Am. Chem. Soc.*, 1967, **89**, 2844 (*ir*)

IC-004620

C_5ClMnO_9

Pentacarbonyl(perchlorato-*O*)manganese, 10Cl

[66034-78-4]

$Mn(OClO_3)(CO)_5$

M 294.4
Synth. from $MnBr(CO)_5$ + $AgClO_4$ in CH_2Cl_2. Useful for obtaining other $[Mn(CO)_5L]^{\oplus}$ cations (L = R_3P, Py, RCN, OH_2). Reacts with $CHCl_3$ to give $MnCl(CO)_5$ at r.t. Ir ν_{CO} 2168, 2085, 2034 cm^{-1}.

Wimmer, F.L. *et al*, *Aust. J. Chem.*, 1978, **31**, 267 (*synth*)
Snow, M.R. *et al*, *Inorg. Chim. Acta*, 1980, **44**, L189 (*props*)

IC-004621

$C_5ClN_5Rh^{3\ominus}$

Chloropentakis(cyano-*C*)rhodate(*III*)(3 –), 9Cl

Chloropentacyanorhodate(III)

$[Rh(CN)_5Cl]^{3\ominus}$ (C_{4v})

M 268.4 (ion)
Tri-K salt: [42892-94-4].
Appearance not recorded. Sol. H_2O.

Geoffroy, G.L. *et al*, *Inorg. Chem.*, 1974, **13**, 430 (*synth, ir, uv*)

IC-004622

C_5ClO_5Re

Pentacarbonylchlororhenium, 9Cl, 8Cl

Chloropentacarbonylrhenium. Rhenium pentacarbonyl chloride

[14099-01-5]

$Re(CO)_5Cl$ (C_{4v})

M 361.7
Synth. from $Re_2(CO)_{10}$ and Cl_2 or uv irradiation or from $Re(CO)_5I$ and Cl_2. White air-stable cryst. (C_6H_6). Subl.$_{0.3}$ 80-85°, Subl. 140°. Ir ν_{CO} 2130w, 2055s, 2020w, 1985m cm^{-1} (CCl_4).

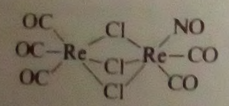
$C_5Cl_3NO_6Re_2$

Pentacarbonyltri-μ-chloronitrosyldirhenium, 9Cl

[37402-69-0]



M 648.8
Synth. from $[Re(CO)_4Cl]_2$ and NO. Mod. air-stable light-orange cryst. (CH_2Cl_2/hexane). Sol. CH_2Cl_2, CCl_4, C_6H_6, reacts with EtOH. Ir ν_{CO} 2113m, 2047vs, 1946s; ν_{NO} 1813m cm^{-1} (CCl_4).

Norton, J.R. *et al*, *Inorg. Chem.*, 1973, **12**, 485 (*synth, ir*)
Inorg. Synth., 1976, **16**, 36 (*synth, ir, raman*)

IC-004628

$C_5CoN_5^{4\ominus}$

Pentakis(cyano-*C*)cobaltate(4 –), 8Cl

Pentacyanocobaltate(1)

$[Co(CN)_5]^{4\ominus}$

M 189.0 (ion)
Formed by pulse radiolysis of $Co^{2\oplus}/CN^{\ominus}$ aq. solns. Soon dec. to Aquapentakis(cyano-*C*)cobaltate(2 –), IC-004660.

Venerable, G.D. *et al*, *J. Am. Chem. Soc.*, 1971, **93**, 2176 (*kinetics*)

IC-004629

$C_5CoN_5^{3\ominus}$

Pentakis(cyano-*C*)cobaltate(3 –), 10Cl

Pentacyanocobaltate(3 –)

[14971-18-7]

$[Co(CN)_5]^{3\ominus}$

M 189.0 (ion)
Square pyramidal anion, may have H_2O coord. in aq. solns. Catalyst for hydrogenation of alkenes, dienes, dienones, Schiff bases, cyanation of alkenes and for deuterium-water exchange. Undergoes oxidative addition with O_2, C_2F_4, C_2H_2, SO_2 etc. Formed in solns. of $[Co(H_2O)_6]^{3\oplus}$ with excess $CN^{\ominus}$. Paramagnetic.

Tri-Li salt: [24803-72-3].
$C_{10}Co_2Li_4N_{10}$ M 419.6
Violet-red cryst. Dimeric: $Li_6[Co_2(CN)_{10}]$.
Tri-K salt: [15415-02-8].
$C_5CoK_3N_5$ M 306.3
Fuel-cell electrolyte, catalyst in hydrogenation of coal. Brown solid. Ir ν_{CN} 2129, 2077, 2042 cm^{-1}.
Tri-K salt, dimer:
$C_{10}Co_2K_6N_{10}$ M 612.6
Violet cryst. (H_2O). Ir ν_{CN} 2128, 2120, 2110, 2079 cm^{-1}.
Tris-Et$_4$N salt: [38141-18-3].
Yellow cryst. (DMF).
Tris-tetrabutylammonium salt: [38141-19-4].
Yellow cryst. (hexamethylphosphoramide).

$[CoN_3(CN)_5]^{3\ominus}$

M 231.0 (ion)
Approx. octahedral coord. about Co. Co—C_{ax} 189, C—N_{ax} 151.1 pm. Azide is linear and asymmetric. CoN—NN 120.4; CoNN—N 115.6 pm.
Tri-K salt: [14705-99-8].
Golden needles (dil. HCl/MeOH). Sol. H_2O. Ir ν_{NNN} 2070, 1300, 604, ν_{CoNN} 2130; ν_{Co-C} 418, 378 cm^{-1} (mineral oil).
Tri-K salt, dihydrate: [82861-86-7].
Synth. from $[Co(NH_3)_5N_3]Cl_2$, KCN and $CoCl_2.6H_2O$ catalyst. Yellow plates (H_2O).
Pentaammineaquacobalt(3+) salt: [102941-70-8].
Pentaammineaquacobalt(3+) azidopentakis(cyano-C) cobaltate(3 –)
Solid. Sol. H_2O. Isostructural with $[Co(NH_3)_6][CoCN_6]$. Possesses trigonally distorted CsCl type lattice. Ir ν_{CN} 2180, 2115, ν_{NNN} 2040 cm^{-1} (KBr).
Tetraamminediaquacobalt(3+) salt: [110635-30-8]. cis-*Tetraamminediaquacobalt(3+) azidopentakis(cyano-C) cobaltate(3 –)*
Solid. Sol. H_2O. Ages to form polymeric material with μ-cyano bridging. Possesses a trigonally distorted CsCl type lattice.
Tris-tetrabutylammonium salt: [33848-07-6].
Cryst. Sol. H_2O. Ir ν_{NNN} 2035, 2020, 625, 598, ν_{CoNN} 2106; ν_{Co-C} 415 cm^{-1} (mineral oil).

$C_5CrN_5S_5^{3\ominus}$ IC-004634

Pentakis(thiocyanato-*N*)chromate(*II*)(3−), 10CI
Pentaisothiocyanatochromate(II)(3−)

$[Cr(NCS)_5]^{3\ominus}$

M 342.4 (ion)
Square pyramidal, H_2O molecule may complete octahedron.

Tri-Na salt: [73440-47-8].
Synth. from aq. $CrCl_2.4H_2O$ and $NaSCN.H_2O$. Hygroscopic, unstable, air-sensitive deep lilac-blue cryst. Sol. Me_2CO, EtOAc. Degree of hydration uncertain. μ_{eff} = 4.5μ_B (r.t.).

Larkworthy, L.F. *et al*, *J. Chem. Soc., Dalton Trans.*, 1980, 262 (*magnetism, uv, ir, synth*)

$C_5CrN_6O^{3\ominus}$ IC-004635

Pentakis(cyano-*C*)nitrosylchromate(3−), 11CI, 10CI, 9CI
Pentacyanonitrosylchromate(3−)
[25360-58-1]

$[Cr(NO)(CN)_5]^{3\ominus}$ (C_{4v})

M 212.0 (ion)
$CN^\ominus$ may be replaced by H_2O and other ligands. N—O 121, Cr—NO 171, Cr—C_{eq} (av.) 203.3, Cr—C_{ax} 207.5 pm, angle: CrNO 176°.

Tri-K salt, monohydrate: [67740-35-6].
Synth. by reduction of K_2CrO_4 in strongly alkaline KCN with hydroxylamine in excess. Bright green cryst. (EtOH aq.). μ_{eff} = 1.87μ_B (298K). Ir ν_{NO} 1637, ν_{CN} 2120, ν_{CrN} 620 cm^{-1}.

Tris(ethylenediamine)cobalt(III) *salt:* [55991-02-1].
$C_{11}H_{24}CoCrN_{13}O$ M 451.3
Bright yellow cryst. Ir ν_{NO} 1660 cm^{-1}.

Tris(ethylenediamine)chromium(III) *salt:* [74438-21-4].
Bright yellow cryst. Ir ν_{NO} 1670 cm^{-1}.

Tri-NH_4 salt: [60255-53-0].
Synth. by neutralisation with ammonia of $H_3[Cr(CN)_5NO]$ from tri-K salt. Green solid. Sol. H_2O, MeOH.

[14100-08-4]

$C_5F_5MnO_6Te$ IC-004639

Pentacarbonyl(pentafluorohydroxytellurato-*O*)manganese, 11CI
[90414-49-6]

$Mn(OTeF_5)(CO)_5$ (C_{4v})

M 433.5
Mn—O 204 pm; angle MnOTe 139.3°. Synth. from $MeMn(CO)_5$ and $HOTeF_5$ in CH_2Cl_2 at 22°. Orange cryst. (CH_2Cl_2); stable under N_2, dec. in CH_2Cl_2.

Abney, K.D. *et al*, *Inorg. Chem.*, 1984, **23**, 1994 (*synth, ir, ms, uv, F-19 nmr, cryst struct*)

$C_5F_6O_5Re_2$ IC-004640

Pentacarbonyl-μ-fluoropentafluorodirhenium, 9CI
[41884-64-4]

$F_5ReFRe(CO)_5$

M 626.4
Can be regarded either as covalent adduct (preferred) or as $ReF_6^\ominus$ salt of $Re(CO)_5^\oplus$. Synth. from $Re_2(CO)_{10}$ and ReF_6 in HF. V. moisture-sensitive orange platelets.

Bruce, D.M. *et al*, *J. Chem. Soc., Chem. Commun.*, 1973, 321 (*synth, cryst struct*)

$C_5FeN_5O_3S^{5\ominus}$ IC-004641

Pentakis(cyano-*C*)[sulfito(2−)-*S*]ferrate(*II*)(5−), 9CI
Pentacyanosulfitoferrate(II)

$[Fe(CN)_5(SO_3)]^{5\ominus}$

M 266.0 (ion)
Octahedral anion. Labile $[Fe(CN)_5L]$ deriv.

Penta-Na salt: [12169-60-7].
Synth. from $Na_2[Fe(CN)_5(NO)]$ + alkaline Na_2SO_3. Yellow cryst. + H_2O. There is uncertainty about the degree of hydration.

[75559-97-6]

IC-004661

$C_5H_2FeN_5O^{3\ominus}$

Aquapentakis(cyano-*C*)ferrate(*II*)(3−), 9CI

Aquapentacyanoferrate(II)(*3*−). *Aquoferrocyanide*

[18497-51-3]

$[Fe^{II}(CN)_5(OH_2)]^{3\ominus}$

M 203.9 (ion)
Octahedral anion. Obt. variously by: (1) Hydrol. of $[Fe(CN)_6]^{4\ominus}$ in presence of light, heat or dilute acid, (2) reduction of $[Fe(CN)_5(NO)]^{2\ominus}$ in alkaline soln., (3) hydrol. of $[Fe(CN)_5(NH_3)]^{3\ominus}$ in presence of ascorbic acid. Used in spectrophotometric analysis. Synthetic intermed. Photocatalyst for reduction. Samples rarely pure. Redox active, photolabile. Sol. H_2O. May be reduced to blue $[Fe(CN)_5(H_2O)]^{2\ominus}$.

Tri-Na salt: [14100-31-3].
Useful precursor and redox agent. Light yellow deliquescent powder + $1H_2O$. Contains $[Fe_2(CN)_{10}]^{6\ominus}$ as well as $Na_2[Fe(CN)_5(OH_2)]$.

Approx. octahedral.

Cs salt: [60173-43-5].
Synth. from $Cs_2[OsCl_6]$ and acetylacetone. Ir ν_{Os-Cl} 350vs, 334m, 324vs cm^{-1}.

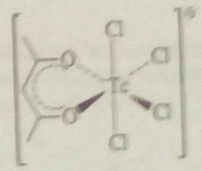
Schaetzel, G. *et al*, *Z. Naturforsch., B*, 1976, **31**, 749 (*synth, ms, ir*)

IC-004712

$C_5H_7Cl_4O_2Tc^{\ominus}$

Tetrachloro(2,4-pentanedionato-O,O')technetate(*IV*)(1−), 10CI

(Acetylacetonato)tetrachlorotechnetate(IV)(1−)



M 339.8 (ion)
Approx. octahedral anion. Synth. from $[TcCl_6]^{2\ominus}$ + ligand.

Ph_4P salt: [71128-01-3].
Red prisms. Sol. CH_2Cl_2, spar. sol. Me_2CO, C_6H_6, EtOH; insol. ethers, hydrocarbons. Mp 225° dec.

Mazzi, U. *et al*, *Transition Met. Chem.*, 1979, **4**, 151 (*synth, ir, ac. props, magnetism*)

IC-004713

$C_5H_7F_4MnNO$

Aquatetrafluoro(pyridine)manganese(*IV*)

$MnF_4(OH_2)(Py)$

M 228.0

Struct. not known. Synth. from $KMnO_4$, Py and 48% HF. Useful for the synth. of $[MnF_4]^{\ominus}$ anions. Brown needles; stable at r.t., does not attack glass in absence of H_2O but has a faint smell of Py. Sol. 48% HF. $\mu_{eff} = 3.98\mu_B$ (302K).

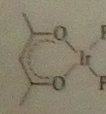
Chaudhuri, M.K. *et al, J. Inorg. Nucl. Chem.*, 1981, **43**, 85 (*synth, ir, magnetism*)

$C_5H_4F_4IrO_2P_2$ IC-004714

(2,4-Pentanedionato-*O,O'*)bis(phosphorous trifluoride) iridium(*I*), 8Cl

(2,4-Pentanedionato)bis(trifluorophosphine)iridium(I). *(Acetylacetonato)bis(trifluorophosphine)iridium*(I)

[34228-56-3]



M 467.2

Square planar. Orange cryst. (pentane). Sol. pentane, C_5H_{12}.

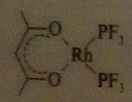
Bennett, M.A. *et al, Inorg. Chem.*, 1971, **10**, 2387 (*synth, ir, F-19 nmr*)

$C_5H_4F_6O_2P_2Rh$ IC-004715

(2,4-Pentanedionato-*O,O'*)bis(phosphorous trifluoride) rhodium, 8Cl

2,4-Pentanedionatobis(trifluorophosphine)rhodium(I). *Acetylacetonatobis(trifluorophosphine)rhodium*(I)

[34267-87-3]



M 377.9

Prob. square planar struct. Orange cryst. Sol. pentane. Mp 75-77°.

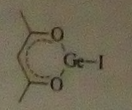
Bennett, M.A. *et al, Inorg. Chem.*, 1971, **10**, 2387 (*synth, ir, pmr, F-19 nmr*)

$C_5H_5GeIO_2$ IC-004716

Iodo(2,4-pentanedionato-*O,O'*)germanium, 9Cl

(Pentane-2,4-dionato)germanium(II) *iodide*

[59269-05-5]



M 298.6

A monomeric germylene deriv., containing 3-coord. Ge. Synth. from GeI_2 + Na(acac) in anhydrous THF. Extremely air- and moisture-sensitive bright yellow cryst. Mp 49-51°.

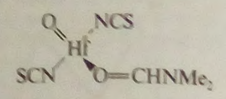
Rodgers, A. *et al, J. Chem. Soc., Chem. Commun.*, 1976, 52 (*synth*)
Stobart, S.R. *et al, J. Chem. Soc., Chem. Commun.*, 1979, 911 (*cryst struct*)

$C_5H_7HfN_3O_2S_2$ IC-004717

(*N,N*-Dimethylformamide-*O*)oxobis(thiocyanato-*N*) hafnium(*IV*), 11Cl

Oxobis(isothiocyanato)(N,N-dimethylformamide) hafnium(IV)

[88609-58-9]



M 383.7

Synth. from $HfOCl_2$ and KSCN in DMF.

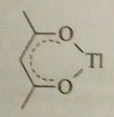
Kharitonova, Yu.Ya. *et al, Russ. J. Inorg. Chem.* (*Engl. Transl.*), 1983, **28**, 1803 (*synth, ir, thermal anal*)

$C_5H_7O_2Tl$ IC-004718

(2,4-Pentanedionato)thallium(*I*)

(Acetylacetonato)thallium(I)

[14219-90-0]



M 303.4

Prepd. from Tl + 2,4-pentanedione in EtOH. White cryst. ($CHCl_3$). Mp 160-5°.

West, R. *et al, J. Inorg. Nucl. Chem.*, 1958, **5**, 295 (*synth, ir*)

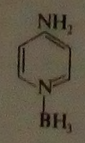
$C_5H_9BN_2$ IC-004720

(4-Aminopyridine)trihydroboron

Borane 4-aminopyridine. Trihydro(4-pyridinamine-N¹)boron, 10Cl. 4-Pyridinamine compd. with borane(1:1), 9Cl

[59900-43-5]



M 107.9

Used in photographic developer solns.

Max, C.E. *et al, Synth. React. Inorg. Metal-Org. Chem.*, 1977, **7**, 509
U.S. Pat. 4 042 392, (1977); *CA*, **88**, 30399w.
Lelental, M. *et al, J. Photogr. Sci.*, 1978, **26**, 135 (*use*)

$C_5H_4CdN_2O_5$ IC-004721

Aqua[glutamato(2 –)]cadmium

$Cd(OH_2)[OOCCH_2CH_2CH(NH_2)COO]$

M 289.5

V. approx. octahedral Cd with extensive bridging of glutamate ligand.

x-form [50989-19-0]

Cryst. + $1H_2O$ (H_2O).

[55049-27-9, 62454-99-3]

Flook, R.J. *et al, J. Chem. Soc., Chem. Commun.*, 1973, 753 (*cryst struct*)

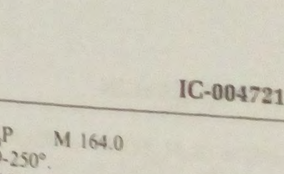
$C_5H_{10}B_3^{\ominus}$ IC-004724

2,3-Dimethyl-2,3,4-tricarbahexaborate(1 –)



M 102.5 (ion)

Proposed *nido*- struct. shown.

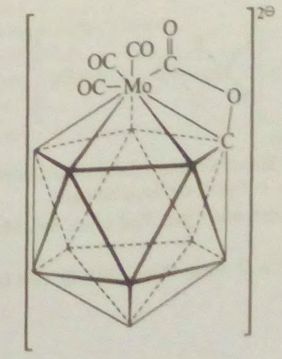
Na salt: Synth. from $Me_2C_2B_3H_5$ + NaH in mineral oil. V. moisture-sensitive solid. Sol. diglyme with dec.

Grimes, R.N. *et al, J. Am. Chem. Soc.*, 1969, **91**, 4010 (*synth, ir, B-11 nmr*)

$C_5H_{10}B_{10}MoO_5^{2\ominus}$ IC-004725

Tricarbonylcarboxy[decahydro-7-hydroxy-π-7-carbaundecaborato(1 –)]molybdate(2 –) lactone, 8Cl

[29386-89-8]



M 354.1 (ion)

May be converted to $(B_{10}H_{10}COH)Mo(CO)_4^{\ominus}$ by aq. acid in the absence of air.

Bis-tetrabutylammonium salt: Yellow cryst. Sol. MeCN.

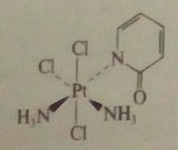
Wegner, P.A. *et al, J. Am. Chem. Soc.*, 1970, **92**, 3473 (*synth, ir, B-11 nmr, cryst struct*)

IC-004726

$C_5H_{10}Cl_2N_3OPt$

Diamminetrichloro(2(1*H*)-pyridinonato-*N*)platinum(*IV*), 11Cl

[86471-90-1]



M 429.5

Has *mer*-chlorides, *cis*-NH_3. Yellow cryst.

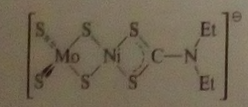
Hollis, L.S. *et al, Inorg. Chem.*, 1983, **22**, 2708.

IC-004727

$C_5H_{10}MoNNiS_6^{\ominus}$

Diethyldithiocarbamato[tetrathiomolybdato(*VI*)]nickelate(*II*)(1−)

[(Diethylcarbamodithioato-S,S′)nickelate(II)]di-μ-thioxodithioxomolybdate(IV)(1−), 10CI



M 431.1 (ion)

Struct. contains square planar Ni and tetrahedral Mo.

Synth. from Bis[tetrathiomolybdato(*VI*)]nickelate(*II*)(2−), IC-020818 + Bis(*N,N*-diethyldithiocarbamato)nickel(*II*), IC-007082.

Tetrapropylammonium salt: [77071-63-7].

Appearance not described. Sol. MeCN. Mp 149-150° (dec.).

Callahan, K.P. *et al, Inorg. Chem.*, 1981, **20**, 1941 (*synth, ir, uv, props*)

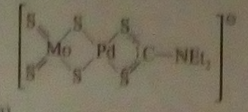
IC-004728

$C_5H_{10}MoNPdS_6^{\ominus}$

Diethyldithiocarbamato(tetrathiomolybdato)palladate(*II*)(1−)

(Diethyldithiocarbamatopalladate)di-μ-thioxodithioxomolybdate(1−), 11CI

[77079-68-6]



M 478.8 (ion)

Synth. from Bis(tetrathiomolybdato)palladate(*II*)(2−), IC-020826 + Pd(*II*) dithiocarbamate.

Tetrapropylammonium salt: Red cryst. Sol. MeCN. Mp 173-174°.

Callahan, K.P. *et al, Inorg. Chem.*, 1981, **20**, 1941 (*synth, ir, uv, elec cond*)

IC-004729

$C_5H_{10}NNaS_2$

Sodium diethyldithiocarbamate

Diethyldithiocarbamic acid, sodium salt, 8CI.
Diethylcarbamodithioic acid, sodium salt, 9CI. Ditiocarb sodium INN. Dithiocarb. Cupral. Imuthiol. DTC

[148-18-5]

$Na(S_2CNEt_2)$

M 171.2

Reagent for the extraction of metal cations. Antidote for acute metal poisoning. Component of copper electroless coating solns. Cryst. (EtOH). Sol. H_2O, EtOH.

▷ EZ6475000.

Trihydrate: [20624-25-3].
$C_5H_{16}NNaO_3S_2$ M 225.3
Commercially available. Orthorhombic cryst.
▷ EZ6550000.

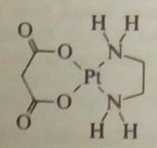
IC-004730

$C_5H_{10}N_2O_4Pt$

1,2-Ethanediamine[propanedioato(2−)-*O,O′*]platinum(*II*), 9CI

Ethylenediamine(malonato)platinum(II). *JM 40*

[41666-77-7]



M 357.2

Square planar struct. Has potential use as anticancer drug. Cryst.

▷ TP2505500.

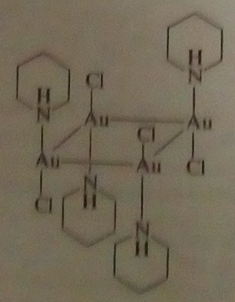
Cutbush, S.D. *et al, J. Inorg. Biochem.*, 1983, **18**, 213 (*cryst struct*)
Boven, E. *et al, Cancer Res.*, 1985, **45**, 86 (*use*)

IC-004731

$C_5H_{11}AuClN$

Chloro(piperidine)gold(*I*), 9CI

[62429-03-2]



tetramer

M 317.5

Weakly bound tetramer in solid state.

Tetramer: Tetrachlorotetrapiperidinetetragold
$C_{20}H_{44}Au_4Cl_4N_4$ M 1270.2

V. air-sensitive colourless cryst. (CH_2Cl_2/pet. ether); dec. readily to metallic gold. Mean Au—Au distance 330pm.

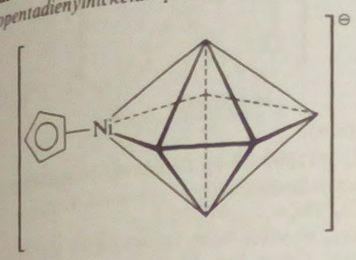
Guy, J.J. *et al, J. Chem. Soc., Dalton Trans.*, 1977, 8 (*synth, cryst struct*)

IC-004732

$C_5H_{11}B_6Ni^{\ominus}$

(η⁴-2,4-Cyclopentadien-1-yl)[η⁴-hexahydrohexaborato(2−)]nickelate(1−), 11Cl

η⁴-Cyclopentadienylnickelaheptaborate(1−)



M 194.6 (ion)

closo-.

Tetrabutylammonium salt: [92227-35-5].

Synth. by heating under reflux $(Bu_4N)_2B_6H_6$ + nickelocene in MeCN. Cryst.

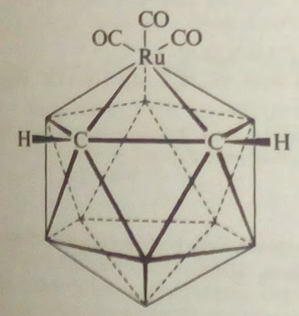
Vinitskii, D.M. *et al, Zh. Neorg. Khim.*, 1984, **29**, 1714 (*synth, ir, uv, pmr, B-11 nmr, ms*)

IC-004733

$C_5H_{11}B_9O_3Ru$

Tricarbonyl[(7,8,9,10,11-η)-undecahydro-7,8-dicarbaundecaborato(2−)]ruthenium, 9Cl

[56465-06-6]



M 317.5

Yellow cryst. + ½ C_6H_6 (C_6H_6/cyclohexane). Mp >350°.

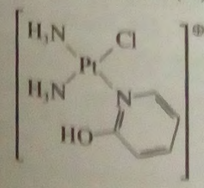
Seidle, A.R., *J. Organomet. Chem.*, 1975, **90**, 249 (*synth, ir, uv, nmr, pmr, ms*)

IC-004734

$C_5H_{11}ClN_3OPt^{\oplus}$

Diamminechloro[2(1*H*)-pyridinone]platinum(*II*)(1+), 1Cl

Diamminechloro(2-hydroxypyridine)platinum(II).
Diamminechloro(α-pyridone)platinum(II)



M 359.6 (ion)

Formed from pyridone, but struct. best considered as hydroxypyridine complex.

Chloride: [85336-86-3].

$C_5H_{11}Cl_2N_3OPt$ M 395.1

Amber cryst. Sol. aq. MeCN.

Nitrate: [86471-92-3].

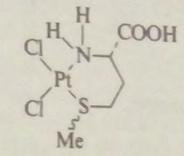
White needles.

Hollis, L.S. *et al, Inorg. Chem.*, 1983, **22**, 2708.

IC-004735

$C_5H_{11}Cl_2NO_2PtS$

Dichloro(methionine)platinum(*II*), 8Cl



(S)-methionine form

M 415.1

Chiral ligand. Carboxyl group not coordinated, possibly involved in intermolecular H-bonding.

(S)-methionine-form [31674-58-5]

(L-methionine)-form

Comprises mixt. of 2 stereoisomers due to chirality at S. Unresolved. Triclinic yellow cryst.

(±)-methionine-form [15654-80-5]

D,L-methionine-form

Synth. from (±)-methionine and K_2PtCl_4. Monoclinic yellow cryst. Insol. EtOH, Et_2O, Me_2CO, $CHCl_3$; mod. sol. hot H_2O (also reported insol. H_2O). Diamagnetic. Darkens at 230°.

Pentacyanonitrosylmanganate(II)

[24868-90-4]

$[Mn(NO)(CN)_5]^{3\ominus}$ (C_{4v})

M 215.0 (ion)

Diamagnetic anion formulated as an Mn(*II*) complex with $CN^{\ominus}$ and NO ligands. Almost linear M—N—O. Anaerobic uv photolysis gives $[Mn(CN)_6]^{4\ominus}$ and NO but in presence of O_2, $[Mn(CN)_5(NO_2)]^{3\ominus}$ is formed. Oxidation with Br_2 or HNO_3 gives $[Mn(CN)_5NO]^{2\ominus}$. Reaction with $MeOSO_2F$ gives $[Mn(CNMe)_5NO][SO_3F]_2$. Slowly dec. in acid, neutral or alkaline soln. E° + 0.66V for $[Mn(CN)_5NO]^{2\ominus} + e^{\ominus} = [Mn(CN)_5NO]^{3\ominus}$.

Tri-K salt: [13821-02-8].
Synth. by storing $K_3[Mn(CN)_5NO].2H_2O$ and P_2O_5 under vacuum. Blue violet cryst. stable in air for up to 12 hrs. Insol. EtOH, Et_2O.

Tri-K salt dihydrate: [16009-97-5].
Synth. by adding NH_2OH to aq. Mn(*II*) salt and an excess of KCN. Purple cryst. (EtOH aq.) stable for 3 months in the absence of light. Diamagnetic, M—N 166, N—O 121 pm. Ir ν_{NO} 1706 cm^{-1}.

Tri-H compd.: [60255-50-7].
Synth. from $K_3[Mn(CN)_5NO].2H_2O$ in H_2O and conc. HCl at 0°. Carmine red cryst. (stable under dry N_2 for several days).

Tri-NH_4 salt, monohydrate: [67740-36-7].
Synth. by neutralising $H_3[Mn(CN)_5NO]$ with aq. NH_3. Violet cryst.

Tris-tetrabutylammonium salt: Synth. from $K_3[Mn(CN)_5NO]$ in H_2O with $[Bu_4N]Br$ in $CHCl_3$. Violet powder. Sol. $CHCl_3$.

C_5MnO_5Tl IC-004831

Pentacarbonyl(thallium)manganese, 9CI

Pentacarbonylmanganesethallium

[52720-99-7]

$TlMn(CO)_5$

M 399.3

Disproportionates in soln. to $Tl[Mn(CO)_5]_3$. Synth. from TlOEt and $HMn(CO)_5$. Generated and used as THF soln. Ir ν_{CO} 2029m, 1921vs cm^{-1} (THF).

Burlitch, J.M. *et al*, *J. Chem. Soc., Dalton Trans.*, 1974, 828 (*synth, ir*)

$C_5MnO_7S^{\oplus}$ IC-004832

Pentacarbonyl(sulfur dioxide-*S*)manganese(1+)

$[Mn(CO)_5(SO_2)]^{\oplus}$

M 259.0 (ion)

Hexafluoroarsenate: [55853-06-0].
Synth. from $MnBr(CO)_5$, $AgAsF_6$ and SO_2. Brownish-yellow solid. Dec. in high vacuum at r.t. to give $MnF(CO)_5.AsF_5$. Reacts with $MnBr(CO)_5$ to give $[(OC)_5MnBrMn(CO)_5]AsF_6$.

Mews, R., *Angew. Chem., Int. Ed. Engl.*, 1975, **14**, 640; 1977, **16**, 56 (*synth*)

$C_5NO_5ReS^{2\oplus}$ IC-004833

Pentacarbonyl(thionitrosyl)rhenium(2+), 11CI

$[Re(CO)_5(NS)]^{2\oplus}$

M 372.3 (ion)

Bis-hexafluoroantimonate: [84303-53-7].
Light-red solid. Sl. sol. SO_2. Dec. at 136°. Ir ν_{CO} 2220vs, 2200w, 2178sh, 2160vs, 2068m, 2038sh; Ir ν_{NS} 1370vs cm^{-1}(nujol/Kel-F).

Hartmann, G. *et al*, *Z. Naturforsch., B*, 1985, **40**, 343 (*synth, ir*)

C_5NO_6V IC-004834

Pentacarbonylnitrosylvanadium, 11CI

[14883-03-5]

$V(CO)_5NO$

M 221.0

Synth. by reaction of $[Et_4N][V(CO)_6]$ and $[NO][BF_4]$ in CH_2Cl_2 at −50°. Highly reactive, CO readily replaced by other ligands. Thermally unstable deep red-violet cryst., may be stored for weeks at −25° under N_2. Sol. CH_2Cl_2, aromatic hydrocarbons. Dec. >10°. Ir ν_{CO} 2100w, 2050w, 1990s, ν_{NO} 1695 cm^{-1} (hexane).

Fjare, K.L. *et al*, *J. Am. Chem. Soc.*, 1983, **105**, 2303 (*synth, ir, ms, uv, bibl*)

$C_5N_5NbOS_5^{2\ominus}$ IC-004835

Oxopentakis(thiocyanato-*N*)niobate(*V*)(2−), 11CI

Pentaisothiocyanatooxoniobate(V)(2−).
Pentakis(isothiocyanato)oxoniobate(V)(2−), *8CI*

[21791-70-8]

$[NbO(NCS)_5]^{2\ominus}$ (C_{4v})

M 399.3 (ion)

Octahedral. Formed in a spectrophotometric estimation of Nb.

Bis-Et_4N salt: [58179-28-5].
Yellow solid. Mp 228-235°. Ir $\nu_{Nb=O}$ 935 cm^{-1}.
Bis-Ph_4P salt: [58288-60-1].
Yellow solid. Mp 261-265°. Ir $\nu_{Nb=O}$ 935 cm^{-1}.
Bis-Ph_4As salt: [30267-08-4].
Synth. by reaction of Nb(*V*) solns. with excess KNCS, extracting with Et_2O and adding $[Ph_4As]Cl$ to the extract. Dark yellow solid. Mp 258-261°. Nb—O 170 pm. Ir $\nu_{Nb=O}$ 935 cm^{-1}.

Djodjević, C. *et al*, *Anal. Chem.*, 1968, **40**, 1512 (*synth, Nb detn*)
Kamenar, B. *et al*, *J. Chem. Soc. A*, 1970, 2379 (*cryst struct*)
Tamhina, B. *et al*, *Croat. Chim. Acta*, 1975, **47**, 79 (*synth, ir*)

$C_5N_5Ni^{3\ominus}$ IC-004836

Pentakis(cyano-*C*)nickelate(*II*)(3−)

Pentacyanonickelate(II)(3−), *8CI*

[29130-88-9]

$[Ni(CN)_5]^{3\ominus}$

M 188.7 (ion)

Synth. from $[Ni(CN)_4]^{2\ominus}$ + $CN^{\ominus}$.

Tris(1,2-ethanediamine)chromium(3+) salt, anhydrous: [30207-43-3].
$C_{11}H_{24}CrN_{11}Ni$ M 421.0
Square pyramidal anion. Red solid.
Tris(1,2-ethanediamine)chromium(3+) salt, 1.5 hydrate: [20523-47-1].
$C_{11}H_{27}CrN_{11}NiO_{1.5}$ M 448.0
Square pyramidal and trigonal bipyramidal nickel anions. Red cryst.
Tris(1,3-propanediamine)chromium(3+) salt, dihydrate: [52154-76-4].
$C_{14}H_{34}CrN_{11}NiO_2$ M 499.1
Square pyramidal anion. Red cryst.

Raymond, K.N. *et al*, *Inorg. Chem.*, 1966, **5**, 949; 1968, **7**, 1362 (*synth, ir, uv, cryst struct*)
Jurnak, F.A. *et al*, *Inorg. Chem.*, 1974, **13**, 2387 (*synth, cryst struct*)

$C_5N_5ORe S_5^{2\ominus}$ IC-004837

Oxopentakis(thiocyanato-*N*)rhenate(*V*)(2−), 10CI

Penta(isothiocyanato)oxorhenate(V)(2−)

$[ReO(NCS)_5]^{2\ominus}$

M 492.6 (ion)

Synth. from $ReO_4^{\ominus}$ and $NCS^{\ominus}$ ion or from $[ReOBr_4.MeCN]^{\ominus}$ or $ReOCl_5^{2\ominus}$ by ligand substitution.

Bis-tetrabutylammonium salt: [74176-28-6].
Yellow cryst.
Bis-Ph_4As salt: [74176-29-7].
Yellow-green cryst. (Me_2CO/isobutanol). Appears to exist in 2 cryst. forms.

Davison, A. *et al*, *Inorg. Chem.*, 1981, **20**, 1160 (*synth, ir, uv, props*)

$C_5N_5OS_5Tc^{2\ominus}$ IC-004838

Pentakis(thiocyanato-*N*)oxotechnetate(*V*)(2−)

Penta(isothiocyanato)oxotechnetate(V)(2−)

$[TcO(NCS)_5]^{2\ominus}$ (C_{4v})

M 405.3 (ion)

Prep. from $TcOCl_4^{\ominus}$ + $NCS^{\ominus}$. Thiocyanate dissociates in dil. soln. (MeCN); in presence of excess $NCS^{\ominus}$ gives $Tc(NCS)_6^{n\ominus}$ complexes.

Bis-Ph_4As salt: [74185-18-5].

Red microcryst.

Davison, A. *et al*, *Inorg. Chem.*, 1981, **20**, 1160 (*synth, uv, ir, magnetism, props*)

$C_5N_5OS_5V^{3\ominus}$ IC-004839

Oxopentakis(thiocyanato-*N*)vanadate(*IV*)(3−), 11CI

Pentaisothiocyanato(oxo)vanadate(IV)(3−)

[27342-93-4]

$[VO(NCS)_5]^{3\ominus}$ (C_{4v})

M 357.3 (ion)

Tris-Me_4N salt: [22608-76-0].
Synth. by adding excess $[Me_4N]NCS$ to $VO^{2\ominus}$ in H_2O. Dark blue solid.
Tris(methyltrioctylammonium) salt: [60551-56-6].
Synth. analogously to the Me_4N salt. May be used to extract V into C_6H_6. Blue solid.

Robbins, D.J. *et al*, *J. Chem. Soc., Dalton Trans.*, 1974, 813 (*cd, mcd*)
Sato, T. *et al*, *Anal. Chim. Acta*, 1976, **84**, 397 (*synth, use*)
Johnson, M.D. *et al*, *Inorg. Chem.*, 1983, **22**, 1068 (*synth, Me_4N salt*)

$C_5N_5OTc^{2\ominus}$ IC-004840

Pentakis(cyano-*C*)oxotechnetate(*V*)(2−)

Pentacyanooxotechnetate(V)(2−)

$[O{=}Tc(CN)_5]^{2\ominus}$ (C_{4v})

M 244.9 (ion)

Octahedral anion. Product of aerobic hydrolysis of $Tc^{III}/CN^{\ominus}$ solns.; synth. by reaction of TcO_2 aq. with hot aq. KCN. Hydrol. to $[TcO_2(CN)_4]^{3\ominus}$.

Di-K salt: [73396-80-2].
Pale greenish-yellow cryst. (KCN aq.).

Trop, H.S. *et al*, *Inorg. Chem.*, 1980, **19**, 1993 (*synth, uv, ir, props*)

$C_5N_5OV^{3\ominus}$ IC-004841

Pentakis(cyano-*C*)oxovanadate(*IV*)(3−), 11CI

Pentacyanooxovanadate(IV)(3−).
Oxopentacyanovanadate(IV)(3−)

[26062-62-4]

$[VO(CN)_5]^{3\ominus}$ (C_{4v})

M 197.0 (ion)

Octahedral.

▷ Cyanides are toxic.

Tri-K salt: [32241-24-0].
Synth. by adding $VO(OAc)_2$ to saturated aq. KCN. Green solid. Paramagnetic; μ_{eff} = 1.64μ_B, g = 1.941.
Tri-Cs salt: [18866-26-7].
Synth. by adding CsCl to a soln. of $VOSO_4$ in 6*M* NaCN. Blue solid.
Tris-Me_4N salt: [36921-00-3].
Synth. by adding $[Me_4N]I$ to a soln. of $VOSO_4$ in 6*M* NaCN. Catalyst in a slurry process for the conversion of black oil. Light green solid.

$C_5N_5O_2S_5U^{3\ominus}$ IC-004842

Dioxopentakis(thiocyanato-*N*)uranate(*VI*)(3−)

Pentakis(isothiocyanato)dioxouranate(VI)(3−)

$[UO_2(NCS)_5]^{3\ominus}$

M 560.4 (ion)

Tri-K salt: Orange cryst. + $2H_2O$. Sol. H_2O, Me_2CO, MeOH, EtOH. Mp 235° dec. Loses H_2O on storage over conc. H_2SO_4 or on heating to 140-145°.
Tri-Cs salt: Orange cryst. + $2H_2O$. Sol. H_2O, MeOH, EtOH, Me_2CO. Mp 280° dec. Loses H_2O on storage over conc. H_2SO_4.
Tri-NH_4 salt: Orange cryst. + $2H_2O$. Sol. H_2O, Me_2CO, EtOH, MeOH. Mp 190° dec. Loses H_2O on storage over conc. H_2SO_4 or on heating to 80-90°.
Tris-Et_4N salt: Yellow solid + $1H_2O$. Sol. H_2O, EtOH. Mp 235-250°. Loses H_2O at 80-90°.
Tri-pyridinium salt: Yellow needles. Sol. EtOH, H_2O.

Markov, V.P. *et al*, *Russ. J. Inorg. Chem. (Engl. Transl.)*, 1960, **5**, 712; 1960, **5**, 724; 1964, **9**, 305 (*synth*)

Andrä, K. *et al*, *Z. Chem.*, 1965, **5**, 145 (*synth*)

$C_5N_5Zr^{5\ominus}$ IC-004843

Pentakis(cyano-*C*)zirconate(5−), 11CI

$[Zr(CN)_5]^{5\ominus}$

M 221.3 (ion)

Penta-K salt: [62278-13-1].
$C_5K_4N_5Zr$ M 416.8
Synth. from KCN and $ZrBr_3$ in liq. NH_3. Air-and moisture-sensitive grey powder. Insol. NH_3, gen. insol. in solvs. with which there is no reaction. μ_{eff} = 2.69μ_B (298K).

▷ Cyanides are toxic.

Nicholls, D. *et al*, *Inorg. Chim. Acta*, 1977, **21**, L17 (*synth, ir, powder struct*)

$C_5N_6ORe^{3\ominus}$ IC-004844

Pentakis(cyano-*C*)nitrosylrhenate(3−)

Pentacyanonitrosylrhenate(3−)

[69290-64-8]

$[Re(CN)_5(NO)]^{3\ominus}$

M 346.3 (ion)

$[Re(CN)_7NO]^{3\ominus}$ has been reformulated as above. Several salts known.

Tri-K salt: [69290-63-7].
Red cryst. + $3H_2O$ (H_2O). Sol. H_2O. Ir ν_{NO} ~1650 cm^{-1}. Diamagnetic.

[45047-06-1, 58601-85-7]

Griffith, W.P. *et al*, *J. Chem. Soc., Dalton Trans.*, 1978, 1411 (*synth, ir, props*)

$C_5N_6ORu^{2\ominus}$ IC-004845

Pentakis(cyano-*C*)nitrosylruthenate(2−), 9CI

Pentacyano(nitrosyl)ruthenate(2−)

[34849-73-5]

$[Ru(CN)_5(NO)]^{2\ominus}$

M 261.1 (ion)
Approx. octahedral. Prep. by treating $[Ru(CN)_4]^{4\ominus}$ with HNO_3 or with NO. Reacts with base to give $[Ru(NO_2)(CN)_5]^{4\ominus}$.
Di-Li salt: Prep. by treating $Ag_2[Ru(NO)(CN)_5]$ with LiCl. Red salt. Readily sol. H_2O.
Di-Na salt: Prepd. by dehydrating the corresp. dihydrate over P_2O_5. Red-brown solid. Insol. H_2O.
Di-K salt: Prepd. by dehydrating corresp. dihydrate over P_2O_5. Red-brown solid. Insol. H_2O. Ir $\nu_{C\equiv N}$ 2200, 2145, 2100; ν_{NO} 1915 cm^{-1} (nujol).
Di-K salt, dihydrate: Ir $\nu_{C\equiv N}$ 2205, 2157, 2110, ν_{NO} 1927 cm^{-1} (KBr).
Di-Ag(I) salt:
$C_5Ag_2N_4ORu$ M 476.9
Prepd. by heating $K_4[Ru(CN)_5]$ with conc. HNO_3, neutralising, and adding $AgNO_3$.

$C_5N_4O_2Rh^{3\ominus}$ IC-004849

Pentakis(cyano-*C*)nitritorhodate(*III*)(3−)
Nitropentacyanorhodate(III)(3−)

$[Rh(CN)_5(NO_2)]^{3\ominus}$

M 278.9 (ion)
Tri-K salt: Synth. from $RhCl_3.3H_2O$, KCN, K/Hg and NO. White microcryst.

Lawson, D.N. *et al, J. Chem. Soc. A*, 1966, 52 (*synth, ir*)

$C_5N_4OsS_6^{2\ominus}$ IC-004850

Pentakis(thiocyanato-*N*)thionitrosylosmate(2−)
Pentaisothiocyanato(thionitrosyl)osmate(2−)
[82867-79-6]

$[Os(NS)(NCS)_5]^{2\ominus}$ (C_{4v})

M 526.6 (ion)
Bis-Ph_4P salt: [82867-80-9].
Synth. from $[Ph_4P][OsNCl_4]$ with $[Ph_4P][NCS]$ in aq. Me_2CO. Brown-green hexagonal plates(MeCN). Ir ν_{SCS} 2125sh, 2080s, 2050s, ν_{OsNS} 1270s cm^{-1}.

Wright, M.J. *et al, Transition Met. Chem.*, 1982, **7**, 53 (*synth, ir*)

$C_5N_4Re^{3\ominus}$ IC-004851

Pentacyanonitridorhenate(*V*)(3−)

$[N{\equiv}Re(CN)_5]^{3\ominus}$

M 330.3 (ion)
Tri-K salt: [25685-10-3].

Synth. from $K_2[ReN(CN)_4]H_2O$ and KCN in H_2O. Yellow microcryst. (MeOH aq.). Ir $\nu_{Re\equiv N}$ 1035 cm^{-1} (solid).

Johnson, N.P., *J. Chem. Soc. A*, 1969, 1843 (*synth, ir, uv*)

$C_5N_4ReS_5^{2\ominus}$ IC-004852

Nitridopentakis(thiocyanato-*N*)rhenate(*VI*)(2−), 10CI
Pentaisothiocyanato(nitrido)rhenate(VI)(2−)

$[N{\equiv}Re(NCS)_5]^{2\ominus}$

M 490.6 (ion)
Distorted octahedral geometry. Interatomic distances: Re≡N 165.7, Re—N 199.7-205.0 pm.
Bis-Ph_4As salt: [68148-82-3].
Synth. from $AsPh_4[ReNCl_4]$, $AsPh_4NCS$ and KNCS in MeOH. Deep red plates ($CHCl_3$).

Currondo, M.A.A.F. de C.T. *et al, J. Chem. Soc., Dalton Trans.*, 1978, 844 (*synth, cryst struct*)

C_5O_5 IC-004853

1,2,3,4-Pentatetraene-1,5-dione, 11CI
Carbon suboxide (C_5O_2)
[5179-36-1]

O=C=C=C=C=C=O

M 92.0
Formed from 2,4,6-tridiazacyclohexane-1,3,5-trione + hν neat or in Ar matrix at 12K. Yellow solid, dec. at ~ −90°.

Maier, G. *et al, Angew. Chem., Int. Ed. Engl.*, 1988, **27**, 566 (*synth, cmr, ir, uv*)

C_5O_5Os IC-004854

Pentacarbonylosmium
Osmium carbonyl, 9CI. Osmium pentacarbonyl
[16406-49-8]

$Os(CO)_5$

M 330.2
Synth. from $Os_3(CO)_{12}$ and CO (200 atm.) at 280-290°. Colourless to pale-yellow cryst., melting to mobile yellow liq. Sol. common org. solvs. Mp 2-2.5°. Ir ν_{CO} 2035, 1993 cm^{-1}. Cmr 182.6 ppm ($CDCl_3$).

Rushman, P. *et al, Organometallics*, 1983, **2**, 693 (*synth, ir, cmr*)

Ingalls, *et al, J. Am. Chem. Soc.*, 1990, **112**, 639 (*ir*)

$C_5O_5Re^{\ominus}$ IC-004855

Pentacarbonylrhenate(1−), 10CI, 9CI
[14971-38-1]

$[Re(CO)_5]^{\ominus}$

M 326.2 (ion)
Salts generally prepd. and used *in situ* due to extreme sensitivity to air and moisture.
Na salt: [33634-75-2].
Synth. from $Re_2(CO)_{10}$ + Na/Hg. Yellow-green soln. in THF. Ir ν_{CO} 1917, 1862 cm^{-1} (MeCN).
K salt: [63139-42-4].
Moisture-sensitive.

[35725-77-0]

Hieber, W. *et al, Chem. Ber.*, 1960, **93**, 901 (*synth*)
Moore, E.J. *et al, J. Am. Chem. Soc.*, 1986, **108**, 2257 (*ir*)

C_5O_5Ru IC-004856

Pentacarbonylruthenium
Ruthenium carbonyl ($Ru(CO)_5$). Ruthenium pentacarbonyl
[16406-48-7]

$Ru(CO)_5$

M 241.1
Trigonal bipyramidal. Synth. by high pressure carbonylation of $Ru_3(CO)_{12}$, Ru, RuI_3, RuS_2 or $Ru(acac)_3$, or photochemical degradation of $Ru_3(CO)_{12}$ in heptane under CO. Invaluable synthetic reagent. Colourless liq.; readily dec. at r.t. (or in sunlight or on gentle heating), turning yellow, evolving CO and depositing $Ru_3(CO)_{12}$. Sol. EtOH, C_6H_6, $CHCl_3$, hydrocarbons; insol. H_2O. Mp −22°, Mp −17° to −16°. ΔH_f° −1054 kJ mol^{-1}. Ir ν_{CO} 2035, 1999 cm^{-1} (heptane).

$C_5O_5Tc^{\ominus}$ IC-004857

Pentacarbonyltechnetate(1−)

$[Tc(CO)_5]^{\ominus}$

M 238.9 (ion)
Rare example of technetium in oxidation state −1; anion of $HTc(CO)_5$.

Hileman, J.C. *et al, Inorg. Chem.*, 1962, **1**, 933.

$C_5O_{15}Th^{6\ominus}$ IC-004858

Pentakis(carbonato(2−)-*O,O'*)thorate(6−)
Pentacarbonatothorate(IV)(6−)

$[Th(CO_3)_5]^{6\ominus}$

M 532.0 (ion)
10-Coord. with bicapped square antiprismatic struct. (guanidinium and sodium salts).
Hexa-Na salt: [12388-47-9]
$C_5Na_6O_{15}Th$ M 670.0
Large colourless prisms + $12H_2O$. Sol. H_2O.
Hexa-K salt:
$C_5K_6O_{15}Th$ M 766.6
Colourless prisms + $10H_2O$. Sol. H_2O.
Hexakis-guanidinium salt: [12384-93-1]
Colourless cubic cryst. + $4H_2O$. Sol. H_2O. Mp >150° dec. Slowly effloresces in air. H_2O lost at 50-80°.
Bis-hexaamminecobalt(3+) salt: [41875-80-5]
$C_5H_{36}Co_2N_{12}O_{15}Th$ M 854.3

Affords quantitive pptn. of Th. Ruby-red to orange solid + $10H_2O$. Insol. H_2O, sol. dil. HCl. Mp *ca.* 200° dec. Efflorescent.

$C_6AlO_{12}^{3\ominus}$ IC-004860

Tris(oxalato)aluminate(3−)
Tris[ethanedioato(2−)-O,O']aluminate(3−)
[15226-56-9]

$[Al(C_2O_4)_3]^{3\ominus}$

M 291.0 (ion)
Log $\beta \sim 15$.
Tri-K salt, trihydrate: [15242-51-0].
Synth. from Al, KOH and $H_2C_2O_4$. Colourless cryst. (H_2O). Forms mixed cryst. with $K_3[M(C_2O_4)_3].3H_2O$ (M = Cr or Fe).

$C_6Am_2O_{12}$ IC-004861

Americium(*III*) oxalate
Tris(oxalato)diamericium(III). *Tris(ethanedioato) diamericium*(III)

$Am_2(C_2O_4)_3$

M 746.1
Heptahydrate isol.; evidence for tetra- and monohydrates during dehydration of heptahydrate. Anhydrous salt stable to 320°; dec. to AmO_2 over range 320-470°.
Heptahydrate: [16519-58-7].
$C_6H_{14}Am_2O_{19}$ M 872.2
Pink, tan-brown cryst. Loses H_2O on heating >80° in air. Dehydration complete at 230°.
Decahydrate: [18421-70-0].
$C_6H_{20}Am_2O_{22}$ M 926.3
Pink cryst. Isomorphous with Nd, Sm analogues.
[65113-20-4]

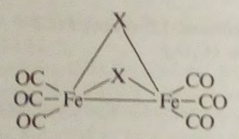
$C_6Br_2Fe_2O_6$ IC-004862

Di-μ-bromohexacarbonyldiiron, 9CI
Bis(tricarbonyliron bromide)
[36190-46-2]



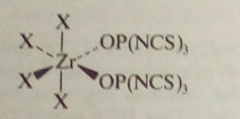
X = Br

M 439.5
Fine dark red needles (pentane). Unstable in soln. Mp 57-59° dec.

Koerner von Gustorf, E. *et al*, *Z. Naturforsch., B*, 1972, **27**, 140 (*synth, ir, uv*)

$C_6Br_4N_6O_2P_2S_6Zr$ IC-004863

Tetrabromobis(phosphoryl isothiocyanate-*O*) zirconium(*IV*), 11CI
Zirconium tetrabromide bis(phosphoryl isothiocyanate). Zirconium(IV) *bromide bis(phosphoryl isothiocyanate)*



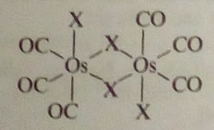
X = Br

M 853.2
Octahedral.
cis-form [85108-12-9]
Synth. from $ZrBr_4$ + $OP(NCS)_3$. White cryst.

Shopenko, V.V. *et al*, *Ukr. Khim. Zh.* (*Russ. Ed.*), 1983, **49**, 3; *CA*, **98**, 154213g (*synth, ir, raman*)

$C_6Br_4O_6Os_2$ IC-004864

Di-μ-bromodibromohexacarbonyldiosmium
Tetrabromohexacarbonyldiosmium
[17731-88-3]



X = Br

M 868.0

Synth. from $Os_3(CO)_{12}$, BBr_3 and a 3:1 mixture of H_2CO (1 atm.)at 150° for 1 h. Purified by subl. at 190°. Catalyst precursor for hydrogenation reactions. White cryst. (CH_2Cl_2). Mp 315°. Subl. 190° *in vacuo*.
Monomer: Dibromotricarbonylosmium
$C_3Br_2O_3Os$ M 434.0
No separate existence.

Hales, L.A.W. *et al*, *J. Chem. Soc. A*, 1967, 1932 (*synth, ir*)
Choi, H.W. *et al*, *Inorg. Chem.*, 1981, **20**, 2664 (*synth, ms, ir*)

Tetrachlorobis(phosphoryl isothiocyanate-*O*)hafnium(*IV*), 11Cl
Hafnium(IV) *chloride bis(phosphoryl isothiocyanate)*

$HfCl_4[OP(NCS)_3]_2$

M 762.7
Octahedral.
cis-form [85165-95-3]
The analogous derivative of $ZrBr_4$ has the same struct.
[74678-35-6]

Skopenko, V.V. *et al*, *Ukr. Khim. Zh.* (*Russ. Ed.*), 1980, **46**, 601; 1983, **49**, 3; *CA*, **93**, 106182w; **98**, 154213g (*synth, ir, raman, struct*)

$C_6Cl_4O_6Os_2$ IC-004874

Hexacarbonyldi-μ-chlorodichlorodiosmium, 9Cl
Hexacarbonyltetrachlorodiosmium
[17633-40-8]
As Di-μ-bromodibromohexacarbonyldiosmium, IC-004864 with

X = Cl

M 690.2
Two isomers known which are prob. structural isomers, not dimorphs.
α-form [22377-51-1]
Colourless cryst. (C_6H_6 or CCl_4). Mp 266°. In $CHCl_3$ soln. isomerises to β-form.
β-form [22377-54-4]
Colourless cryst. ($CHCl_3$). Mp 285°.
Monomer: Tricarbonyldichloroosmium
$C_3Cl_2O_3Os$ M 345.1
No separate existence.

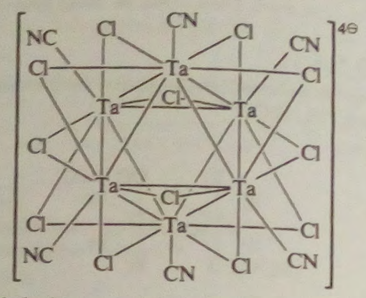
$C_6Cl_{12}N_6Ta_6^{4\ominus}$ IC-004875

Dodeca-μ-chlorohexakis(cyano-*C*)hexatantalate(4−), 11Cl



M 1667.2 (ion)
Octahedron of 6 Ta with Cl bridging all edges and a terminal $CN^{\ominus}$ on each Ta.
Tetra-H compd.: [83619-42-5].
Synth. by adding KCN then HCN to a soln. of Ta_6Cl_{14} in MeOH. Brown solid + 12 H_2O (H_2O).

Basson, S.S. *et al*, *Transition Met. Chem.*, 1982, **7**, 207 (*synth, cryst struct*)

$C_6Cm_2O_{12}$ IC-004876

Curium(*III*) oxalate
Tris(oxalato)dicurium(III). *Tris(ethanedioato)dicurium*(III)
[35568-26-4]

$Cm_2(C_2O_4)_3$

M 752.1
Anhydrous complex obtd. by thermal dec. of decahydrate at 280°. On further heating *in vacuo* forms $Cm_2(CO_3)_3$ and Cm_2O_3.
Decahydrate: [21107-06-2].
$C_6H_{20}Cm_2O_{22}$ M 932.3
Pale green cryst. (white). Stable to 60°. Loses H_2O step wise *in vacuo* up to 280°.
▷ Cryst. dec. by α-radiolysis within a few hrs.

Burney, G.A. *et al*, *Inorg. Nucl. Chem. Lett.*, 1967, **3**, 79 (*synth*)
Scherer, V. *et al*, *J. Inorg. Nucl. Chem.*, 1968, **30**, 1433.

$C_6CoN_5O^{2\ominus}$ IC-004877

Carbonylpentakis(cyano-*C*)cobaltate(*III*)(3−), 11Cl
Carbonylpentacyanocobaltate(III)

$[Co(CN)_5CO]^{2\ominus}$

M 217.0 (ion)
Bis-tetrabutylammonium salt: [89959-52-4].
White cryst. Sol. H_2O.

Palmans, R. *et al*, *Inorg. Chem.*, 1984, **23**, 1792 (*synth, ir, uv*)

$C_6CoN_6^{3\ominus}$ IC-004878

Hexakis(cyano-*C*)cobaltate(*III*)(3−)
Hexacyanocobaltate(III)(*3*−)
[14897-04-2]

$[Co(CN)_6]^{3\ominus}$

M 215.0 (ion)

Pseudo-octahedral complex.
Tri-K salt: [50725-64-9].
$C_6CoK_3N_6$ M 332.3
Synth. from KCN and $Co(CN)_2$, followed by oxidation of the cyanocobaltate(*II*). Yellow cryst. (H_2O). Sol. H_2O; v. sl. sol. liq. NH_3.
Tri-Ag salt:
$C_6Ag_3CoN_6$ M 538.6
White powder.
Tri-H compd.:
$C_6H_3CoN_6$ M 218.0
Obt. by metathesis of tri-K salt. White powder + ½ H_2O.

Inorg. Synth., 1946, **2**, 225 (*synth*)
Ludi, A. *et al*, *Helv. Chim. Acta*, 1967, **50**, 2035 (*synth, powder struct, Ag salt, H compd, thermal dec, ir*)

$C_6CoN_6O^{3\ominus}$ IC-004879

(Cyanato-*N*)pentakis(cyano-*C*)cobaltate(*III*)(3−), 9Cl
Isocyanatopentacyanocobaltate(III)(3−)

$[Co(CN)_5NCO]^{3\ominus}$

M 231.0 (ion)
Tri-K salt: [36426-58-1].
Sol. ethylene glycol.

Cohen, M.A. *et al*, *Inorg. Chim. Acta*, 1972, **6**, 188 (*synth, ir, uv*)

$C_6CoN_6S^{3\ominus}$ IC-004880

Pentakis(cyano-*C*)(thiocyanato-*S*)cobaltate(*III*)(3−), 8Cl
Thiocyanatopentacyanocobaltate(III)(*3*−).
Pentacyano(isothiocyanato)cobaltate(III)(*3*−)

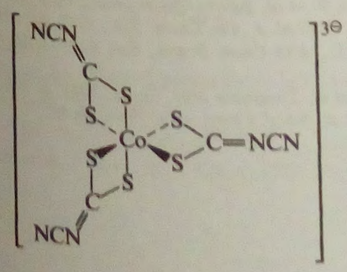
$[Co(CN)_5SCN]^{3\ominus}$

M 247.1 (ion)
Shows linkage isomerism between $[Co(CN)_5NCS]^{3\ominus}$ and $[Co(CN)_5SCN]^{3\ominus}$ species in soln.
Tri-K salt: [19528-41-7].
M 322.3
Yellow orange solid. Sol. H_2O.

Burmeister, J.L. *et al*, *Inorg. Chem.*, 1964, **3**, 919 (*synth, ir*)
Gutterman, D.F. *et al*, *J. Am. Chem. Soc.*, 1969, **91**, 3105.

$C_6CoN_6S_6^{3\ominus}$ IC-004881

Tris[*N*-cyanodithiocarbamato(2−)]cobaltate(*III*)(3−), 8Cl



M 407.4 (ion)
Photosensitive.
Tris-diphenyliodonium(1+) salt: [11064-46-3].
Cation and anion react on heating. Green solid. Sol. $MeNO_2$, MeCN, Py, DMF, DMSO. Dec. at 72°.

Ramaswamy, K.K. *et al*, *Inorg. Chem.*, 1970, **9**, 2649 (*synth, ir, props*)

$C_6CoN_6Se^{3\ominus}$ IC-004882

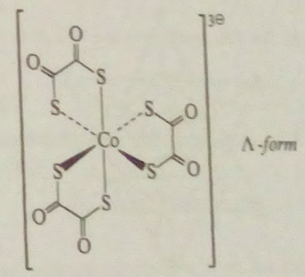
Pentakis(cyano-*C*)selenocyanatocobaltate(*III*)(3−)
$[Co(CN)_5SeCN]^{3\ominus}$

M 293.9 (ion)
N-bonded-form [45113-78-8]
Pentakis(cyano-C)(selenocyanato-N)cobaltate(3−), 9Cl
Pentacyano(isoselenocyanato)cobaltate(III)
Tris-tetrabutylammonium salt: [33848-08-7].
Brown solid. Sol. H_2O, CH_2Cl_2.
Se-bonded-form [57384-14-2]
Pentakis(cyano-C)(selenocyanato-Se)cobaltate(3−), 9Cl
Tri-K salt: [57384-13-1].
Brown solid. Sol. H_2O, CH_2Cl_2, Me_2CO.

Melpolder, J.B. *et al*, *Inorg. Chim. Acta*, 1975, **15**, 91 (*synth, ir, uv*)

$C_6CoO_6S_6^{3\ominus}$ IC-004883

Tris(dithiooxalato)cobaltate(*III*)(3−)
Tris[ethanebis(thioato)(2−)-S,S']cobaltate(3−), 9Cl
[48175-47-9]



M 419.3 (ion)
Λ-form
K, Ba salt: [37604-14-1].
Cryst. + $4H_2O$. Sol. H_2O. $[\alpha]_D$ +700°.
Δ-form
K, Ba salt: Dark brown solid. Sol. H_2O. $[\alpha]_D$ −750°.

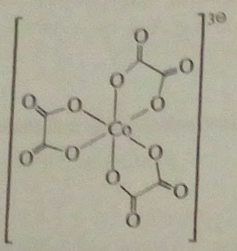
Butler, K.R. *et al*, *Acta Crystallogr., Sect. B*, 1975, **31**, 354 (*cryst struct*)
Dwyer, F.P. *et al*, *J. Am. Chem. Soc.*, 1959, **81**, 2335 (*synth, resol*)
Fujita, J. *et al*, *Bull. Chem. Soc. Jpn.*, 1964, **37**, 528 (*ir*)

$C_6CoO_{12}^{3\ominus}$ IC-004884

Tris(oxalato)cobaltate(*III*)(3−)

Tris[ethanedioato(2−)-O,O′]cobaltate(III)(*3−*), *10CI*

[15053-34-6]



M 322.9 (ion)

Subject of studies of kinetics of redox reactions, including with metalloproteins.

Tri-K salt: [15275-08-8].

Deep green cryst. + $3H_2O$. Sol. H_2O.

Palmer, W.G., *Experimental Inorganic Chemistry*, Cambridge Univ. Press, 1954, 550 (*synth*)
Hancock, R.D. *et al*, *J. Mol. Struct.*, 1970, **6**, 441 (*ir, raman*)

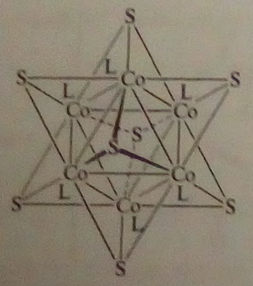
$C_6Co_6O_6S_8$ IC-004885

Hexacarbonylocta-μ_3-thioxohexacobalt

Hexacarbonyloctasulfidohexacobalt



L = CO

M 778.1

Octahedron of Co_6 encapsulated in S_8 cube. Co—Co 288.1; Co—S_{av} 216 pm. A 98 electron complex. Mod. air-stable green cryst. + $3S_8$.

Gervasio, G. *et al*, *Inorg. Chim. Acta*, 1984, **83**, L9 (*synth, ir, cryst struct*)

$C_6CrF_9O_8^{\ominus}$ IC-004886

Dioxotris(trifluoroacetato)chromate(*VI*)(1−)

$CrO_2(OOCCF_3)_3^{\ominus}$

M 423.0 (ion)

K salt: [33938-15-7].

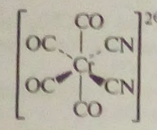
Heat- and light- unstable red brown solid. Easily hydrol.

NH_4 salt: [33071-55-5].

Gerlach, J.N. *et al*, *Inorg. Chem.*, 1971, **10**, 1541 (*synth, ir*)

$C_6CrN_2O_4^{2\ominus}$ IC-004887

Tetracarbonylbis(cyano)chromate(2−)



M 216.0 (ion)

cis-form

Bis(triphenylphosphine)iminium salt: [22142-87-6].

$C_{78}H_{60}CrN_4O_4P_4$ M 1293.2

White, air-stable cryst.

Behrens, H. *et al*, *Z. Anorg. Allg. Chem.*, 1960, **306**, 94.
Behrens, H. *et al*, *Chem. Ber.*, 1964, **97**, 433 (*synth*)
Ruff, J.K., *Inorg. Chem.*, 1969, **8**, 86 (*synth*)

$C_6CrN_6^{6\ominus}$ IC-004888

Hexakis(cyano-*C*)chromate(6−), 11CI, 10CI

Hexacyanochromate(0)(6−)

$[Cr(CN)_6]^{6\ominus}$ (O_h)

M 208.1 (ion)

Synth. by reduction of hexacyanochromate(*III*) or (*II*) by alkali metal in liq. NH_3.

Hexa-Na salt: [79346-55-7].

$C_6CrN_6Na_6$ M 346.0

V. air-sensitive dark green solid, dihydrate, loses $2H_2O$ at 100° *in vacuo*. Diamagnetic.

Hexa-K salt: [15415-54-0].

$C_6CrK_6N_6$ M 442.6

V. air-sensitive dark green solid, dihydrate, loses $2H_2O$ at 100° *in vacuo*. Diamagnetic.

Eaton, J.P. *et al*, *Transition Met. Chem.*, 1981, **6**, 203 (*synth, ir, powder struct*)
Dodsworth, E.S. *et al*, *Inorg. Chim. Acta*, 1984, **89**, 143 (*reaction*)

$C_6CrN_6^{4\ominus}$ IC-004889

Hexakis(cyano-*C*)chromate(*II*)(4−), 10CI, 9CI

Hexacyanochromate(II)(*4−*)

[23209-09-8]

$[Cr(CN)_6]^{4\ominus}$ (O_h)

M 208.1 (ion)

Careful control of pH is necessary to isolate pure salts of this low-spin anion. Powerful reducing agent.

Tetra-Na salt: [79346-49-9].

Blue air-sensitive solid + $2H_2O$; a decahydrate is also known. Dehydrates at 100° *in vacuo*.

Tetra-K salt: [20740-32-3].

$C_6CrK_4N_6$ M 364.4

Green air-sensitive solid + $2H_2O$. Dehydrates at 100° *in vacuo*.

[62483-39-0, 79358-98-8, 79358-99-9]

Bosch-Arino, F. *et al*, *Inform. Quim. Anal.*, 1972, **26**, 231, 254.

$C_6CrN_6^{3\ominus}$ IC-004890

Hexakis(cyano-*C*)chromate(3−), 11CI, 10CI, 9CI, 8CI

Hexacyanochromate(III)

[14875-14-0]

$[Cr(CN)_6]^{3\ominus}$ (O_h)

M 208.1 (ion)

Kinetically inert, octahedral complex, many salts known. Cr—C 200 to 210 pm; C—N 112 to 119 pm. Undergoes slow aquation to give $[Cr(OH_2)_6]^{3\oplus}$.

Tri-K salt: [13601-11-1].

Synth. from aq. $Cr(OAc)_3$ and KCN. Light-sensitive pale yellow cryst. (H_2O or aq. MeOH). V. sol. H_2O, slow dec., aided by heat and light; insol. alcohols. μ_{eff} = 3.87μ_B (298K).

Cs, Mn(II) *salt:* [82990-00-9].

$C_6CrCsMnN_6$ M 395.9

Synth. from $Cs_3Cr(CN)_6$ and $MnCl_2$ in H_2O. Yellow cryst. + $1H_2O$. Fcc struct. Contains ordered Cr(*III*)—CN—Cr(*II*) arrangement with high spin Mn(*II*). Ferrimagnetic, T_N 90K. Superexchange intections occur via CN bridges.

Hexaamminechromium(*3+*) *salt:* [23540-70-7].

$C_6H_{18}Cr_2N_{12}$ M 362.2

Yellow solid.

Tris(1,2-ethanediamine-N,N′)chromium(*3+*) *salt 1:1:* [55782-98-4].

$C_{12}H_{24}Cr_2N_{12}$ M 440.3

Yellow solid + $2H_2O$.

Hexakis(urea-O)chromium(*3+*) *salt:* [23540-67-2].

$C_{12}H_{24}Cr_2N_{18}O_6$ M 620.4

Synth. from aq. $[Cr(urea)_6]Cl_3$ and $K_3[Cr(CN)_6]$. Light green cryst.

Iron(*2+*) *salt* (*2:3*): [14123-10-5].

$C_{12}Cr_2Fe_3N_{12}$ M 583.7

Synth. from $K_3Cr(CN)_6$ + $Fe^{2\oplus}$ salts. Light brown to orange powder. Shows linkage isomerism.

[20558-40-1, 20792-64-7, 23540-71-8]

Bis[[μ-(cyano-*C*:*N*)]bis(cyano-*C*)dicuprate(1−)], 11CI

$[[Cu_4(CN)_6]^{2\ominus}]_n$

M 410.2 (ion)

Polymeric anion of six-membered rings in infinite sheets. Cu is trigonal planar; Cand N disordered over cyano positions.

Tetraamminecopper(2+) salt: [52504-74-2].
$C_6H_{12}Cu_5N_{10}$ M 541.9
Violet cryst.

[94100-40-0]

$C_6EuF_9O_6$ IC-004904

Tris(trifluoroacetato)europium(*III*)

Europium(III) *trifluoroacetate*

[70236-95-2]

$Eu(OOCCF_3)_3$

M 491.0

Forms complexes with crown ethers.

Trihydrate: [94079-71-7].
Prob. dimeric, with 8-coordinate Eu bound to $3H_2O$, 4 bridging O, 1 terminal O. Loses H_2O at 70° *in vacuo*. μ_{eff} = 3.45μ_B.

18-Crown-6 complex (1:1):
$C_{18}H_{24}EuF_9O_{12}$ M 755.3
Hygroscopic. 2:1 deriv. also obt.

Bis(15-crown-5) complex: Hygroscopic cryst.

Singh, M. *et al, J. Inorg. Nucl. Chem.*, 1978, **40**, 1939 (*synth, magnetism*)

$C_6F_3MnO_5S$ IC-004907

Pentacarbonyl(trifluoromethanethiolato)manganese, 9CI

[50979-57-2]

$F_3CSMn(CO)_5$

M 296.0
Readily eliminates CO to give di- and trinuclear species. Synth. by photolysis of $Mn_2(CO)_{10}$ with CF_3SSCF_3. Pale-yellow solid; not isol. pure. Ir ν_{CO} 2142w, 2052vs, 2018m cm^{-1}.

Davidson, J.L. *et al*, *J. Chem. Soc., Dalton Trans.*, 1973, 1957 (*synth, ir, F-19 nmr*)
Grobe, J. *et al*, *J. Fluorine Chem.*, 1978, **11**, 265 (*synth, ir, F-19 nmr*)

$C_6F_3MnO_5Se$ IC-004908

Pentacarbonyl(trifluoromethaneselenolato)manganese, 10CI

[66672-65-9]

$F_3CSeMn(CO)_5$

M 342.9
Synth. from $HMn(CO)_5$ and $CF_3SeSeCF_3$. Yellow oil. Ir ν_{CO} 2128w, 2044vs,br, 2010s cm^{-1}.

Grobe, J. *et al*, *J. Fluorine Chem.*, 1978, **11**, 265 (*synth, ir, F-19 nmr*)

$C_6F_5Xe^{\oplus}$ IC-004909

Pentafluorophenylxenon(*II*)(1+)

$[C_6F_5Xe]^{\oplus}$

M 298.3 (ion)
Fluorotris(pentafluorophenyl)borate:
$C_{24}BF_{21}Xe$ M 829.3
Formed from XeF_2 + $(C_6F_5)_3B$ in MeCN at 0°. Solid, rapidly dec. in H_2O to C_6HF_5. Sol. CH_2Cl_2/MeCN.

Naumann, D. *et al*, *J. Chem. Soc., Chem. Commun.*, 1989, 47, 625 (*synth, cmr, F-19 nmr, Xe-129 nmr, cryst struct*)

$C_6F_9GaO_6$ IC-004910

Gallium(*III*) trifluoroacetate

Gallium tris(trifluoroacetate). Tris(trifluoroacetato)gallium

$Ga(OOCCF_3)_3$

M 408.7
Synth. from $GaCl_3$ + CF_3CO_2H at 70°. White hygroscopic powder. Mp 260° dec. Complexes with 3Py and 3DMF descr.

Sartori, P. *et al*, *J. Fluorine Chem.*, 1971, **1**, 463 (*synth, props*)

$C_6F_9InO_6$ IC-004911

Indium(*III*) trifluoroacetate

Tris(trifluoroacetato)indium

[36554-90-2]

$In(OOCCF_3)_3$

M 453.8
Synth. from In + CF_3COOH. Colourless v. hygroscopic solid. Mp 317° dec. Complexes with 3Py and THF descr. $In(OCOC_3F_7)_3$ also descr.

Sartori, P. *et al*, *J. Fluorine Chem.*, 1972, **1**, 463 (*synth, props*)

$C_6F_9LaO_6$ IC-004912

Lanthanum(*III*) trifluoroacetate

Tris(trifluoroacetato)lanthanum(III)

[70236-92-9]

$(F_3CCOO)_3La$

M 477.9
Hygroscopic, colourless powder. Sol. H_2O.
Trihydrate: [62266-77-7].
$C_6H_6F_9LaO_9$ M 531.9
Colourless cryst. Sol. H_2O. 8-Coord., loses H_2O *in vacuo*. Diamagnetic.
Bis(tetramethylene sulfoxide) complex:
$C_{14}H_{16}F_9LaO_8S_2$ M 686.2
Colourless cryst. 8-Coord. distorted triangular dodecahedron at La. Chain struct.

Roberts, J.E., *J. Am. Chem. Soc.*, 1961, **83**, 1087 (*synth*)
Rillings, K.W. *et al*, *Thermochim. Acta*, 1974, **10**, 285 (*synth, tga, dta, ir*)

Castellano, E.E. *et al*, *Inorg. Chim. Acta*, 1985, **110**, 77 (*synth, cryst struct*)

$C_6F_9NdO_6$ IC-004913

Neodymium(*III*) trifluoroacetate

Tris(trifluoroacetato)neodymium(III)

[29770-44-3]

$(F_3CCOO)_3Nd$

M 483.2
Hygroscopic powder. Sol. H_2O.
Trihydrate: Pink cryst. Sol. H_2O. Loses H_2O *in vacuo* or above 70°. $\mu_{eff} = 3.56\mu_B$.
Bis(tetramethylene sulfoxide) complex: Pink cryst. Dimer, 8-coord. distorted antiprism.

Roberts, J.D., *J. Am. Chem. Soc.*, 1961, **83**, 1087 (*synth, tga*)
Rillings, K.W. *et al*, *Thermochim. Acta*, 1974, **10**, 285 (*synth, ir, dta, tga*)
Singh, M. *et al*, *J. Inorg. Nucl. Chem.*, 1978, **40**, 1939 (*synth, ir, magnetism*)

Castellano, E.E. *et al*, *Inorg. Chim. Acta*, 1985, **110**, 77 (*synth, cryst struct*)

$C_6F_9O_6Pr$ IC-004914

Praseodymium(*III*) trifluoroacetate

Tris(trifluoroacetato)praseodymium(III)

[70236-94-1]

$(F_3CCOO)_3Pr$

M 479.9
Green solid. Dec. ~ 248°.
Trihydrate (dimeric): [55135-12-1].
$C_{12}H_{12}F_{18}O_{18}Pr_2$ M 1068.0
Pale green cryst. Sol. H_2O. Dimeric 8-coord. (distorted sq. antiprismatic coord. at Pr). Loses H_2O on heating. $\mu_{eff} = 5.34\mu_B$.

Hara, R. *et al*, *J. Am. Chem. Soc.*, 1954, **76**, 4285 (*synth*)
Rillings, K.W. *et al*, *Thermochim. Acta*, 1974, **10**, 285 (*synth, ir, tga, dta*)
Bone, S.P. *et al*, *J. Chem. Soc., Dalton Trans.*, 1978, 1544 (*cryst struct*)
Singh, M. *et al*, *J. Inorg. Nucl. Chem.*, 1978, **40**, 1939 (*synth, ir, magnetism*)
Gmelin Handbook Inorg. Chem., Syst. No. 39, 1984, **D5**, 57 (*rev, bibl*)

$C_6F_9O_6Tl$ IC-004915

Thallium(*III*) trifluoroacetate

TTFA

[23586-53-0]

$Tl(OOCCF_3)_3$

M 543.4
Prepd. by heating a suspension of Tl_2O_3 in CF_3COOH containing 10-20% H_2O. Electophilic thallating agent used in org. synthesis. White solid. H_2O sensitive. Mp >100° dec.

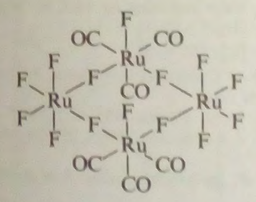
McKillop, A. *et al*, *J. Am. Chem. Soc.*, 1971, **93**, 4841 (*synth, use*)
Hsieh, A.T.T. *et al*, *J. Org. Chem.*, 1972, **37**, 2637 (*ms*)
Larock, R.C. *et al*, *J. Am. Chem. Soc.*, 1982, **104**, 1900 (*synth*)
Sakae, U., *Synth. Reagents*, 1983, 165 (*rev, use*)
Fieser and Fieser's Reagents for Organic Synthesis, Wiley, 1986, **12**, 481 (*use*)

$C_6F_{14}O_6Ru_4$ IC-004916

***cyclo*-Hexacarbonyltetra-μ-fluorodecafluorotetraruthenium, 9CI**

Bis[tricarbonyldifluororuthenium(II)*-ruthenium*(V) *fluoride]. Hexacarbonyltetradecafluorotetraruthenium*

[59537-02-9]



M 838.3
Prepd. by treating Ru_4F_{20} with CO in flow system at 200°, or by heating $[Ru_3(CO)_{12}]$ with XeF_2 in CCl_2FCF_2Cl at 100°. Air-sensitive solid. $\mu_{eff} = 4.45\mu_B$ per 2Ru atoms.

Hewitt, A.J. *et al*, *J. Chem. Soc., Dalton Trans.*, 1976, 579 (*synth, ir, reactions*)

$C_6F_{18}Ge_2Hg$ IC-004917

Bis[tris(trifluoromethyl)germyl]mercury

[82477-25-6]

$(F_3C)_3GeHgGe(CF_3)_3$

M 759.8
Cryst. Mp 135°. $Subl._{0.1}$ 70°. Slow dec. in air. Thermal dec. at 160° with release of mercury. Readily hydrol.

Bochkarev, M.N. *et al*, *J. Organomet. Chem.*, 1982, **229**, C1 (*synth, ir, Hg-199 nmr, F-19 nmr*)
Ermolaev, N.L. *et al*, *Zh. Obshch. Khim.*, 1984, **54**, 96 (*synth*)

$C_6FeN_5O^{3\ominus}$ IC-004918

Carbonylpentakis(cyano-*C*)ferrate(*II*)(3−), 11CI

Carbonylpentacyanoferrate(II)(3−)

[17455-62-8]

$[Fe(CO)(CN)_5]^{3\ominus}$

M 213.9 (ion)
Octahedral anion. Not readily oxidised to an iron(*III*) derivative. Best synth. from $[Fe(CN)_5(NH_3)]^{3\ominus}$ with CO. Alkali metal salts sol. H_2O.
Tri-Na salt: [15418-38-9].
Forms a dihydrate.
Tri-K salt: [26285-25-6].
Synth. from $K_4[Fe(CN)_6]$ + CO under pressure (130-300°). Precursor to Prussian Blue analogue films. Yellow green (H_2O).
Fe(III) *salt:* [70472-77-4].
$C_6Fe_2N_5O$ M 269.7
Prussian Blue analogue.
Tri-H compd.: Carbonylpentacyanoferrous acid
$C_6H_3FeN_5O$ M 216.9
Synth. from Cu(*II*) salt with H_2S, then evaporation. Colourless photosensitive substance (acidic aq. soln.). Sol. H_2O.

[83484-26-8]

Manchot, W. *et al*, *Ber.*, 1912, **45**, 2869 (*synth*)

$C_6FeN_6^{4\ominus}$ IC-004919

Hexakis(cyano-*C*)ferrate(*II*)(4−), 11CI

Hexacyanoferrate(II)(4−). *Ferrocyanide*

[13408-63-4]

$[Fe(CN)_6]^{4\ominus}$ (O_h)

M 211.9 (ion)
Alkali and alkaline earth (except Ba) salts sol. H_2O; insol. EtOH. Low spin Fe(*II*) but crosses over to high spin at 2×10^5 atm. pressure.
Tetra-K salt: [13943-58-3]. *Potassium ferrocyanide*
$C_6FeK_4N_6$ M 368.3
Pale yellow cryst. + $3H_2O$ (H_2O).
K, Cr(III) *salt: Chromium*(III) *potassium ferrocyanide*
$C_6CrFeKN_6$ M 303.0
Polymeric with Cr—N≡C—Fe linkages.
Di-K, Ni(II) *salt:* [13601-16-6]. *Nickel potassium ferrocyanide*
$C_6FeK_2N_6Ni$ M 348.8
Synth. form $K_4Fe(CN)_6.3H_2O$ + $Ni(NO_3)_2.6H_2O$ + KCl in H_2O.
Fe(III) *salt (3:4):* [14038-43-8]. *Ferric ferrocyanide*
$C_{18}Fe_7N_{18}$ M 859.2
Fe(III) *salt (3:4), tetradecahydrate:* [19611-22-8]. *Prussian blue. Iron blue. Pigment blue 27. Berlin blue. Chinese blue. Hamburg blue. Paris blue*
$C_{18}H_{28}Fe_7N_{18}O_{14}$ M 1111.4

Synth. from $K_4Fe(CN)_6$ in 10*M* HCl with $FeCl_3$. Dye; removes H_2S from flue gases. Blue cubic cryst. (H_2O/diffusing into conc. HCl). Insol. H_2O.

Tetra-H compd.: [17126-47-5]. *Ferrocyanic acid*
$C_6H_4FeN_6$ M 215.9
White powder turning blue in moist air. Sol. H_2O, EtOH. Strong acid; dec. on heating.

Tetra-NH_4 salt: [38670-32-5]. *Tetraammonium ferrocyanide monohydrate*
Solid + $1H_2O$. Heating *in vacuo* to 320° gives a green solid of empirical formula $Fe(CN)_2$.

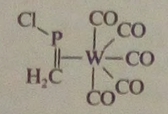
Bis(triphenylphosphine)iminium salt: [71456-74-1].
Cryst. (heptane/THF).

Longoni, G. *et al, J. Organomet. Chem.*, 1979, **174**, C41 (*struct, synth*)
Cerriotti, A. *et al, Inorg. Chem.*, 1983, **22**, 1595 (*synth, ir*)

$C_6H_2ClO_5PW$ IC-004941

Pentacarbonyl(η²-methylenephosphinous chloride) tungsten, 11CI

[100851-76-1]



M 404.3
Deriv. of transient $ClCH_2{=}P$. Highly reactive; gives isolable products with MeOH, 2,3-dimethylbutadiene and 1,4-diphenylbutadiene. Characterised spectroscopically. Ir ν_{CO} 2092m, 1992vs, 1986s, 1970vs, 1944br cm^{-1} (decalin).

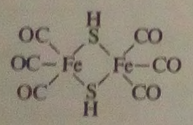
Deschamps, B. *et al, J. Chem. Soc., Chem. Commun.*, 1985, 1010 (*ir, pmr, cmr, P-31 nmr, reactions*)
Deschamps, B. *et al, J. Organomet. Chem.*, 1988, **354**, 83 (*pmr, cmr, P-31 nmr*)

$C_6H_2Fe_2O_6S_2$ IC-004942

Hexacarbonyldi-μ-mercaptodiiron, 10CI

Hexacarbonylbis(μ-hydrothioxo)diiron

[71004-55-2]



M 345.9
V. air-sensitive ruby-red cryst. Mp 62-64° dec., Mp 97-99°. Mixt. of 3 isomers.

Gmelin Handbook Inorg. Chem., 1979, **C1**, 81 (*rev, bibl*)
Seyferth, D. *et al, J. Organomet. Chem.*, 1980, **192**, C1; 1981, **218**, C34 (*synth, pmr, ir, props*)

$C_6H_3BCrNO_5^{\ominus}$ IC-004943

Pentacarbonyl[(cyano-*C*)trihydroborato(1−)-*N*] chromate(1−), 9CI

$[(OC)_5CrNCBH_3]^{\ominus}$

M 231.9 (ion)

Me_4N salt: [52138-78-0].
Yellow cryst. Mp >170° dec.

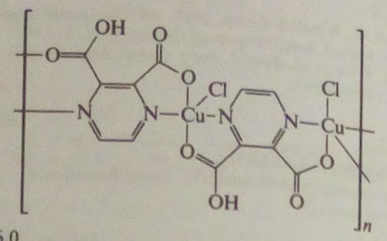
King, R.B. *et al, J. Organomet. Chem.*, 1974, **65**, 71 (*synth, ir, nmr*)

$C_6H_3ClCuN_2O_4$ IC-004944

Chloro[2,3-pyrazinedicarboxylato(1−)]copper(*II*)

Hydrogen chloro[2,3-pyrazinedicarboxylato(2−)-N^1,O^2] cuprate(1−), 9CI

[79329-64-9]



M 266.0
Infinite linear chains with 5-coord. Cu. Green octahedral cryst. (aq. HCl). Exhibits ferromagnetic intrachain exchange.

O'Connor, C.J. *et al, Inorg. Chem.*, 1982, **21**, 64 (*synth, cryst struct, magnetism*)
Burriel, R. *et al, Inorg. Chem.*, 1985, **24**, 3706 (*magnetism*)

$C_6H_3MnNO_4^{\ominus}$ IC-004945

Tetracarbonyl(isocyanomethane)manganate(1−), 9CI

[57195-92-3]

$[(OC)_4MnCNMe]^{\ominus}$

M 208.0 (ion)

Na salt: [75687-67-1].
Synth. from $MnBr(CO)_4(CNMe)$ and Na/Hg in THF at 0°. Generated and used *in situ* as a light-yellow soln. in THF. Ir ν_{CO} 2118m, 1935s, 1863s, 1837vs, 1786s cm^{-1} (THF).

Adams, R.D., *Inorg. Chem.*, 1976, **15**, 174 (*synth, ir*)

$C_6H_3MnO_7S$ IC-004946

Pentacarbonyl(methanesulfinato-*O*)manganese, 9CI

(Methanesulfinato)pentacarbonylmanganese

[37988-76-4]

$MeS(O)OMn(CO)_5$

M 274.0
Rearranges in soln. to *S*-bonded form, Pentacarbonyl(methylsulfonyl)manganese, IC-004947. Synth. from $MeMn(CO)_5$ in liquid SO_2. Not isol. Pmr δ 2.28 ppm (SO_2).

Jacobson, S.E. *et al, Inorg. Chem.*, 1973, **12**, 717 (*synth, ir, pmr*)

$C_6H_3MnO_7S$ IC-004947

Pentacarbonyl(methylsulfonyl)manganese

[19694-44-1]

$MeS(O)_2Mn(CO)_5$

M 274.0
Synth. from $HMn(CO)_5$ and CH_2SO_2 or from $MeMn(CO)_5$ and liquid SO_2. Colourless or pale-yellow cryst. ($CHCl_3$/pentane). Mp 115°. Pmr δ 3.09 ppm (SO_2). Ir ν_{CO} 2139m, 2090w, 2059s, 2044s, 2027m cm^{-1} (CCl_4). Subl. *in vacuo*.

Hartman, F.A. *et al, Inorg. Chem.*, 1968, **7**, 1504 (*synth, ir, pmr*)
Jacobson, S.E. *et al, Inorg. Chem.*, 1973, **12**, 717 (*isom*)
Lorenz, I.-P. *et al, J. Organomet. Chem.*, 1979, **182**, 375 (*synth, ir, pmr, ms*)

$C_6H_4CdN_2O_4$ IC-004948

Bis(cyanoacetato-*N,O*)cadmium

Cadmium cyanoacetate

[52680-39-4]

$(N{\equiv}CCH_2COO)_2Cd$

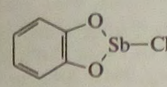
M 280.5
3-D polymer in solid state with approx. octahedral Cd (1 N + 5 O). Hygroscopic colourless plates (H_2O).

[53800-20-7]
Post, M.L. *et al, J. Chem. Soc., Dalton Trans.*, 1974, 285 (*synth, cryst struct*)

$C_6H_4ClO_2Sb$ IC-004949

2-Chloro-1,3,2-benzodioxastibole

[4442-68-6]



M 265.2
Probably polymeric based on -Cl-Sb-Cl-Sb-Cl chain.

Homopolymer: [69860-42-0].
Cryst. (MeCN). Mp >300°.

Anchisi, C. *et al, J. Heterocycl. Chem.*, 1976, **13**, 1033; 1982, **19**, 141 (*synth, reactions, uses*)

McEwen, W.E. *et al, Phosphorus Sulfur*, 1988, **36**, 153 (*pmr, reactions*)

$C_6H_4CrMnN_6O_2^{\ominus}$ IC-004950

Hexakis(μ-cyano)]diaquamanganate(*II*)]chromate(*III*) (1−)

$[Cr(CN)_6Mn(OH_2)_2]^{\ominus}$

M 299.0 (ion)
Anion struct. comprises polymeric network of *trans*-$Mn(OH_2)_2(NC)_4$ and $Cr(CN)_6$.

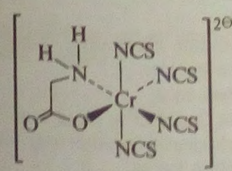
Me_4N salt, 11CI: [102567-08-8].
Synth. from $MnCl_2$, $K_3Cr(CN)_6$ and $[Me_4N]Cl$ in H_2O. Green-yellow plates + $2H_2O$.

Witzel, M. *et al, Z. Naturforsch., B*, 1985, **40**, 1344 (*synth, cryst struct*)

$C_6H_4CrN_5O_2S_4^{2\ominus}$ IC-004951

(Glycinato-*N,O*)tetrakis(thiocyanato-*N*)chromate(*III*) (2−)

Glycinatotetraisothiocyanatochromate(III)(2−)



M 358.3 (ion)
Octahedral anion. Similar spp. known with other amino acids.

Di-K salt: [25591-34-8].

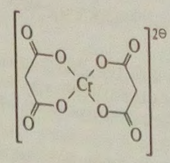
Mp 162°. Ir ν_{CN} 2113, 2089, ν_{CS} 748 cm^{-1}.
Contreras, G. *et al, J. Inorg. Nucl. Chem.*, 1970, **32**, 127, 1295 (*synth, uv-vis*)

$C_6H_4CrO_8^{2\ominus}$ IC-004952

Bis(propanedioato-*O,O'*)chromate(*II*)(2−)

Bis(malonato)chromate(II)(2−), *8CI*

[28161-98-0]



M 256.0 (ion)

Di-Na salt: Blue cryst. + $4H_2O$. μ_{eff} = 4.8μ_B (298K).
Fukuda, Y. *et al, Bull. Chem. Soc. Jpn.*, 1970, **43**, 745 (*stability const*)

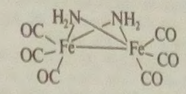
$C_6H_4Fe_2N_2O_6$ IC-004953

Di-μ-amidohexacarbonyldiiron, 9CI, 8CI

[19705-87-4]



M 311.8
Air-sensitive orange-red needles with aromatic smell. Mp 81.5°. Subl. 40° *in vacuo*.

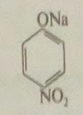
Hieber, W. *et al, Z. Anorg. Allg. Chem.*, 1962, **317**, 63 (*synth, ir*)
Dahl, L.F. *et al, J. Am. Chem. Soc.*, 1968, **90**, 5422 (*synth, struct, ms*)
Frey, V. *et al, Z. Naturforsch., B*, 1968, **23**, 105 (*synth, struct*)

$C_6H_4NNaO_3$ IC-004954

(4-Nitrophenoxy)sodium

Sodium 4-nitrophenolate, 4-Nitrophenol, sodium salt, 8CI. Sodium p-*nitrophenoxide*

[824-78-2]



M 161.0
Synth. by reaction of 4-nitrophenol with aq. NaOH (or Na_2CO_3) or by hydrolysis of $4\text{-}ClC_6H_4NO_2$ with aq. NaOH. Commercially available (90%). Migrates through organic membranes containing crown ethers. Yellow powder. Sol. H_2O (4.0 g per 100 cm^3 at 25°);insol. $CHCl_3$ (except in presence of crown ethers, cryptands etc.). Mp >300°.

▷ Flammable solid; irritant.

Lopatin, B.V. *et al, Izv. Akad. Sci. USSR, Ser. Sci. Khim.*, 1970, 713 (*ir*)

$C_6H_4N_2O_4Zn$ IC-004955

Bis(cyanoacetato-*N,O*)zinc
Zinc cyanoacetate
[71179-00-5]

$Zn(OOCCH_2CN)_2$

M 233.4
Polymeric struct. with octahedral Zn. Catalyst for dimerisation of CH_2=CHCN; cross linking agent for epoxy resins. Colourless cryst. Insol. Me_2CO, MeCN.

[59970-08-0]

Cartwright, M. *et al*, *Inorg. Chim. Acta*, 1979, **34**, 211 (*synth, ir, uv-vis*)

$C_6H_5Br_2OP$ IC-004956

Phenyl phosphorodibromidite, 9CI, 8CI
Phenyl dibromophosphite. Dibromophenoxophosphorus(III)
[70445-77-1]

$PhOPBr_2$

M 283.8
Pungent liq. Bp_{11} 130-132°. n_D^{20} 1.6202.

Frazer, M.J. *et al*, *Chem. Ind. (London)*, 1959, 728 (*synth*)

$C_6H_5ClO_2S$ IC-004957

Phenyl chlorosulfite
Chlorosulfurous acid phenyl ester, 9CI
[13165-73-6]

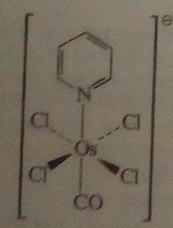
PhOS(O)Cl

M 176.6
Reagent for conversion of aldoximes to nitriles. Bp_{10} 95°.

Bissinger, W.E. *et al*, *J. Am. Chem. Soc.*, 1948, **70**, 2664 (*synth*)
Fieser and Fieser's Reagents for Organic Synthesis, Wiley, 1977, **6**, 456 (*use*)

$C_6H_5Cl_4NOOs^{\ominus}$ IC-004958

Carbonyltetrachloro(pyridine)osmate(*III*)(1−)
[80298-13-1]



M 439.1 (ion)
trans-Octahedral anion.
Cs salt: [90709-14-1].
Synth. from $Cs[OsCl_5CO]$ with Py in MeCN in the presence of bentonite and molecular sieve (4Å).
Et_4N salt: [80298-14-2].
Synth. from $[OsCl_4(CO)_2]^{2\ominus}$ or $[OsCl_5CO]^{2\ominus}$ with Py in the presence of bentonite. Ir ν_{CO} 1984vs; ν_{Os-N} 247s; ν_{Os-Cl} 337w, 316vs cm^{-1}.

Greulich, H.G. *et al*, *J. Organomet. Chem.*, 1981, **220**, 201 (*synth, ir, raman, uv*)
Kremer, S., *Inorg. Chim. Acta*, 1984, **85**, 57 (*esr*)

$C_6H_5Cl_4NORu^{\ominus}$ IC-004959

Carbonyltetrachloro(pyridine)ruthenate(*III*)(1−), 9CI
[46136-11-2]

$[RuCl_4(CO)(Py)]^{\ominus}$

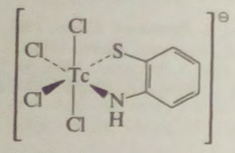
M 349.9 (ion)
Pseudo-octahedral; isomeric form unknown.

Pyridinium salt: Prepd. by treating an aged soln. of ethanolic $RuCl_3.xH_2O$, saturated with CO, with Py. Orange salt. Mp 185°. Ir ν_{CO} 2052, 2046 cm^{-1}; μ_{eff} = 1.8μ_B.
Ph_4As salt: Prepd. by treating a soln. of corresp. pyridinium salt in HCl with $[AsPh_4]Cl$. Orange-brown salt. Mp 175°. Ir ν_{CO} 2042, 2040 cm^{-1}.

Stephenson, T.A. *et al*, *J. Inorg. Nucl. Chem.*, 1966, **28**, 945 (*synth, ir, magnetism*)

$C_6H_5Cl_4NSTc^{\ominus}$ IC-004960

[2-Aminobenzenethiolato(2−)-*N,S*] tetrachlorotechnetate(*V*)(1−)

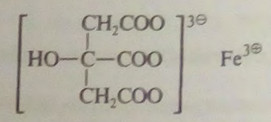


M 363.8 (ion)
Synth. from $TcO(ligand)_2$ + $CHCl_3$.
Tetrabutylammonium salt: [133295-61-1].
Dark blue microcryst (MeOH/HCl). μ_{eff} = 2.86μ_B, hence Tc(*V*).

Cook, J. *et al*, *Inorg. Chem.*, 1991, **30**, 1773 (*synth, cryst struct, ir, magnetism*)

$C_6H_5FeO_7$ IC-004961

Iron(*III*) citrate
Ferric citrate. Iron(III) *2-hydroxy-1,2,3-propanetricarboxylate*
[3522-50-7]



M 244.9
Indefinite composition. Haematinic. Light-sensitive red scales or brown powder.

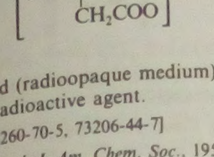
Pentahydrate: [6043-74-9].
Synth. from $Fe_2O_3.nH_2O$ + citric acid. Used for blueprints. Light-sensitive red brown. Insol. EtOH; sol. H_2O. Composition varies.

[28633-45-6]

Gmelin Handbook Inorg. Chem., Syst. No. 59, 1930, **B**, 541 (*bibl*)
Takashima, Y. *et al*, *Bull. Chem. Soc. Jpn.*, 1965, **38**, 1688 (*mössbauer*)

$C_6H_5GaO_7$ IC-004962

Gallium citrate
[30403-03-3]



M 258.8
Diagnostic aid (radioopaque medium). ^{67}Ga compd. is used as a radioactive agent.

[41183-64-6, 52260-70-5, 73206-44-7]

C_6H_5OSb IC-004964

Oxophenylstibine, 10CI
Stibosobenzene
[4519-29-3]

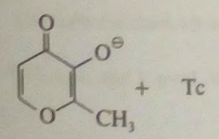
PhSbO

M 214.8
Polymeric. Solid. Insol. Me_2CO.

Blicke, F.F. *et al*, *J. Am. Chem. Soc.*, 1931, **53**, 1025 (*synth*)
Hedges, S.W. *et al*, *J. Chem. Phys.*, 1977, **67**, 4706 (*nqr*)

$[C_6H_5O_3Tc]$ IC-004965

3-Hydroxy-2-methyl-4-pyrone technetium complex
Technetium maltol complex



Minimum formula given. Cationic species not yet characterised. Potential myocardial imaging agent. Pyridinone analogues also reported.

Kanvinde, M.H. *et al*, *J. Nucl. Med.*, 1990, **31**, 908 (*synth, biodistribn*)

$[C_6H_5O_7Tc]$ IC-004966

Technetium citrate
Solcocitran. 2-Hydroxy-1,2,3-propanetricarboxylic acid technetium salt, 11CI

Struct. unknown

Bis-citrate-Tc(*V*) and trinuclear Tc-citrate complexes also know, see Bis(citrato)oxotechnetate(*V*)(3−), IC-007567 and Pentakis(citrato)trioxotritechnetate(*IV*)(9−), IC-012433. Incomplete formula given. Several ill defined complexes produced on reduction of $TcO_4^{\ominus}$/citrate or on reaction of $TcBr_6^{2\ominus}$ with citrate. Imaging kit commercially available. Oxidation state unknown; possibly polymeric.

$C_6H_6Br_3O_7Zr^{\ominus}$ IC-004971

Tris(bromoacetato-*O*)oxozirconate(*IV*)(1−)

$[(BrCH_2COO)_3Zr{=}O]^{\ominus}$

M 521.0 (ion)

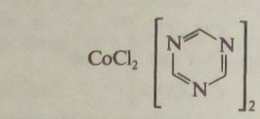
H compd.: [96526-15-7].
$C_6H_7Br_3O_7Zr$ M 522.0
Synth. by heating under reflux $ZrOCl_2$ in excess bromoacetic acid. Solid + $BrCH_2COOH$. Mp > 260°.

Puri, J.K. *et al*, *Inorg. Chim. Acta*, 1985, **97**, 205 (*synth, ir*)

$C_6H_6Cl_2CoN_6$ IC-004972

Dichlorobis(*S*-triazine-N^1)cobalt(*II*), 10CI

[66245-86-1]



M 291.9

Probably octahedral structure with Cl-bridging. Moisture-sensitive pale pink solid.

Johnston, R.D., *Inorg. Chim. Acta*, 1978, **26**, 103 (*synth, uv*)

$C_6H_6Cl_2CuN_2S_2$ IC-004973

Dichlorobis(thiazole)copper(*II*), 10CI, 8CI

[29387-43-7]

As Dibromobis(thiazole-*N*)copper(*II*), IC-004970 with

X = Cl

M 304.7

Chain struct. Turquoise-blue cryst. (DMF/CH_2Cl_2). Sol. CH_2Cl_2; insol. EtOH, Et_2O, C_6H_6, DMF. μ_{eff} = 1.87μ_B.

Eilbeck, W.J. *et al*, *J. Chem. Soc. A*, 1967, 757 (*synth, uv, ir*)
Hughes, M.N. *et al*, *J. Chem. Soc. A*, 1970, 3015 (*uv, ir*)
Estes, W.E. *et al*, *Inorg. Chem.*, 1978, **17**, 1415 (*cryst struct, synth, magnetism*)

$C_6H_6Cl_3O_6Sc$ IC-004974

Scandium chloroacetate

[20753-55-3]

$Sc(OOCCH_2Cl)_3$

M 325.4

Octahedral, polymeric struct. Colourless cryst. Sol. H_2O.

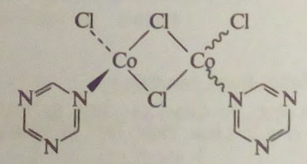
Trihydrate: Colourless cryst. Sol. H_2O.

Pokorny, J. *et al*, *Z. Chem.*, 1972, **12**, 294 (*synth*)
Sugita, Y., *Bull. Chem. Soc. Jpn.*, 1987, **60**, 3441 (*synth, cryst struct*)

$C_6H_6Cl_4Co_2N_6$ IC-004975

Di-μ-chlorodichlorobis(1,3,5-triazine-N^1)dicobalt(*II*), 10CI

[66114-43-0]



M 421.8

Tetrahedral halide bridged dimeric struct. proposed. Moisture-sensitive pale green cryst + $1H_2O$. Paramagnetic.

Monomer: Dichloro(s-*triazine*)*cobalt*(II)
Unknown.

Johnston, R.D. *et al*, *Inorg. Chim. Acta*, 1978, **26**, 103 (*synth, uv, magnetism*)

$C_6H_6Cl_4N_2O_2V$ IC-004976

Tetrachlorobis(2-oxopropanenitrile-*N*)vanadium(*IV*), 11CI

Bis(acetyl cyanide)tetrachlorovanadium(IV)

[104413-79-8]

$VCl_4[N{\equiv}CC(O)CH_3]_2$

M 330.8

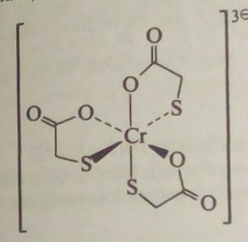
Octahedral. Synth. from VCl_4 and excess CH_3COCN in pet. ether. Dark red solid. Paramagnetic, μ_{eff} = 2.10μ_B (293K). See also μ-Chloroheptachlorotris(2-oxopropanenitrile-*N*)divanadium(*IV*), IC-006474.

Nicholls, D. *et al*, *Inorg. Chim. Acta*, 1986, **115**, L13 (*synth, uv-vis, ir*)

$C_6H_6CrO_6S_3^{3\ominus}$ IC-004977

Tris[mercaptoacetato(2−)]chromate(*III*)(3−), 8CI

Tris(thioglycollato)chromate(III)(3−)



M 322.3 (ion)

Tentative *mer*-struct shown. Cr(*III*) reacts easily with the ligand at temps. above 60°. Complex $(CrL_3)^{3\ominus}$ is formed in pH range 7-10. Blue-green in soln. Not isol.

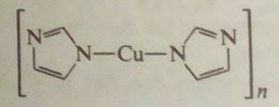
Jacobsen, E. *et al*, *Acta Chem. Scand.*, 1965, **19**, 2379 (*formn, uv-vis*)
Cancellieri, P. *et al*, *Z. Phys. Chem.* (*Frankfurt am Main*), 1968, **62**, 135 (*uv-vis*)

$C_6H_6CuN_4$ IC-004978

Bis(1*H*-imidazolato-N^3)copper(*II*)

Copper(II) *imidazolate*

[29503-37-5]



M 197.6

Polymer: the 3-D network of imidazole linked Cu contains Cu in square planar and flattened tetrahedral geometries. Reddish purple solid; blue, green and brown modifications have been reported. Insol. EtOH.

Jarvis, J.A.J. *et al*, *Acta Crystallogr.*, 1960, **13**, 1027 (*cryst struct*)

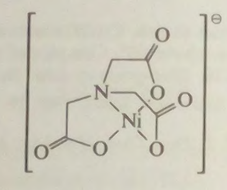
$C_6H_6NNiO_6^{\ominus}$ IC-004985

Nitrilotriacetatonickelate(*II*)(1−), 8CI

N,N-*Bis*(*carboxymethyl*)*glycinatonickelate*(II)(*1*−), *9CI*. [*Tris*(*2-carboxymethyl*)*amine*]*nickelate*(II)(*1*−)

[16448-53-6]



M 246.8 (ion)

Well known in soln. but little studied in solid state.

Na salt, monohydrate: [54112-02-6].
$C_6H_8NNaNiO_7$ M 287.8

K salt: [63640-18-6].
$C_6H_6KNNiO_6$ M 285.9
Electrolyte component for Au—Ni alloy electrodeposition.

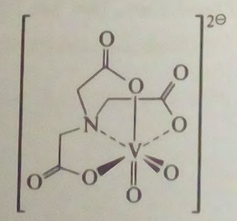
Rajabalee, F.J., *Spectrochim. Acta, Part A*, 1974, **30**, 891 (*synth, ir*)
Bell, C.F., *Principles and Applications of Metal Chelation*, Clarendon, Oxford, 1977.

$C_6H_6NO_8V^{2\ominus}$ IC-004986

(Nitrilotriacetato)dioxovanadate(*V*)(2−)

[N,N-*Bis*(*carboxymethyl*)*glycinato*(3−)-N,O,O′,O″]*dioxovanadate*(V)(2−), *11CI*

[59368-60-4]



M 271.0 (ion)

Octahedral.

Di-K salt: [73636-51-8].

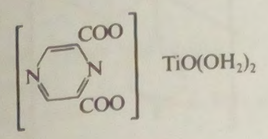
Synth. from Aqua(nitrilotriacetato)oxovanadate(*IV*) (1−), IC-005021 and KNO_2 in H_2O. Yellow hygroscopic solid + $3H_2O$.

Nishizawa, M. *et al*, *Inorg. Chem.*, 1980, **19**, 2284 (*synth*)
Lagrange, J. *et al*, *J. Chem. Soc., Dalton Trans.*, 1984, 239 (*kinetics*)

$C_6H_6N_2O_7Ti$ IC-004987

Diaquaoxo[2,6-pyrazinedicarboxylato(2−)-*N*¹,*O*²,*O*⁶]titanium(*IV*), 11CI

[97895-49-3]



M 266.0

Octahedral, detailed arrangement not known. Synth. by adding $TiCl_4$ to a cold aq. soln. of the ligand, then heating to 50°. Colourless solid.

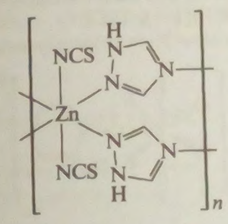
Ventur, D. *et al*, *Z. Anorg. Allg. Chem.*, 1985, **524**, 40 (*synth, ir*)

$C_6H_6N_8S_2Zn$ IC-004988

Bis(thiocyanato-*N*)bis(1*H*-1,2,4-triazole-*N*²)zinc

Bis(1*H*-*1,2,4-triazole*)*zinc dithiocyanate*

[63654-16-0]



M 319.6

2D polymer in solid state with octahedral Zn, 2,4-bridging triazole molecules and NCS-groups acting as N-donors on either side of the plane. H-bonding between layers. White cryst. (H_2O).

[99527-47-6]

Haasnoot, J.G. *et al*, *Z. Naturforsch., B*, 1977, **32**, 533 (*synth, ir*)

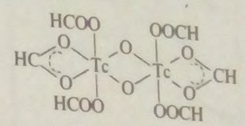
$C_6H_6O_{14}Tc_2$ IC-004990

Hexakisformatodi-μ-oxoditechnetium(*V*)

Technetium(V) *formate*



M 499.9

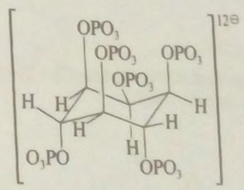
Proposed struct. shown (similar may exist for Tc-acetate, Tc-pivalate). Synth. by electrochem., $BH_4^{\ominus}$ or Sn(*II*) reduction of $TcO_4^{\ominus}$ in formate buffer. Useful precursor for the synthesis of several Tc radiopharmaceuticals. Red complex, exists in soln. in anionic form.

Kennedy, C.M. *et al*, *Appl. Radiat. Isot.*, 1988, **39**, 213, 1159, 1167 (*synth, uv, ir, esr, chromatog, electrochem, rev*)

$[C_6H_6O_{24}P_6Tc^{12\ominus}]$ IC-004991

Phytate technetium complex

Inositol hexaphosphate technetium complex



Complex(es) not characterised; product of Sn(*II*) reduction may be a binuclear Tc—Sn—phytate species. Pharmaceutically-useful solns. synth. by Sn(*II*) or electrolytic reduction of $TcO_4^{\ominus}$ in the presence of phytate. Assessed for imaging liver and bones, and for osteosarcoma take-up.

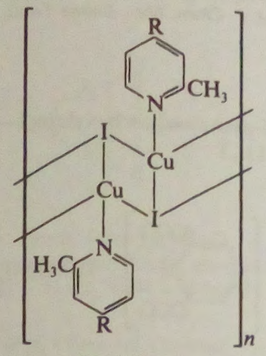
C_6H_7CuIN IC-004994

Iodo(2-methylpyridine)copper(*I*)

Poly[(2-methylpyridine)iodocopper], *12CI*

[20631-71-4]



R = H

M 283.5

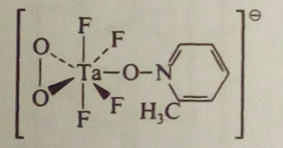
Struct. comprises chains of edge-sharing Cu_2I_2 rhombs with each Cu bound to three I and the N of the Lewis base. Colourless needles.

Rath, N.P. *et al*, *J. Chem. Soc., Dalton Trans.*, 1986, 2449 (*synth, cryst struct*)

$C_6H_7F_4NO_3Ta^{\ominus}$ IC-004995

Tetrafluoro(2-methylpyridine-1-oxide-*O*) peroxytantalate(*V*)(1 –), 10CI

Tetrafluoro(α-picoline-N-oxide)peroxytantalate(V)(*1* –)



M 398.0 (ion)

Pentagonal bipyramidal struct.

Et_4N salt: [63871-68-1].
Synth. by dissolving $Et_4N[Ta(O_2)F_4(H_2O)]$ and the ligand in cold MeCN. Colourless, hygroscopic solid (MeCN).

Dewan, J.C. *et al*, *J. Chem. Soc., Dalton Trans.*, 1977, 981 (*synth, cryst struct*)

$C_6H_7GaO_8$ IC-004996

Gallium(*III*) hydroxide citrate

$Ga(OH)[OOCCH_2C(OH)(COO)CH_2COOH]$

M 276.8

Used for administration of ^{67}Ga for detection of malignant tumours. White sl. hygroscopic amorphous powder. Sol. H_2O; spar. sol. EtOH.

Dudley, H.C., *J. Am. Chem. Soc.*, 1950, **72**, 3822 (*synth*)

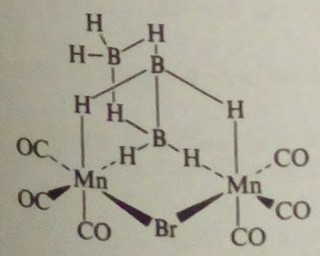
$C_6H_8B_3BrMn_2O_6$ IC-005000

μ-Bromohexacarbonyl[μ-[η:η-octahydrotriborato(1 –)]] dimanganese

[74432-08-9]



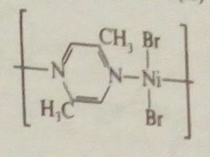
M 398.3

Synth. from $(OC)_3MnB_3H_8$ and $Br_2/AlBr_3$. Mod. air stable red-brown monclinic cryst.

Gaines, D.F. *et al*, *Inorg. Chem.*, 1980, **19**, 2989 (*synth, struct, ms, ir, pmr, B-11 nmr*)

$C_6H_8Br_2N_2Ni$ IC-005001

Dibromo(2,5-dimethylpyrazine)nickel(*II*)



M 326.6

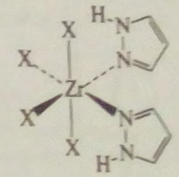
Chain struct. with bridging pyrazines affording *trans*-square planar nickel. Moisture-sensitive intensely purple dichroic cryst. Diamagnetic.

Lever, A.B.P. *et al*, *J. Chem. Soc.*, 1963, 5042; 1964, 4761 (*synth, uv-vis, magnetism*)
Ayres, F.D. *et al*, *Inorg. Chem.*, 1964, **3**, 1303 (*cryst struct*)

$C_6H_8Br_4N_4Zr$ IC-005002

Tetrabromobis(1*H*-pyrazole-N^2)zirconium(*IV*), 11CI

Zirconium tetrabromide bis(pyrazole). Zirconium(IV) *bromide bis(pyrazole)*



cis-form

X = Br

M 546.9

Octahedral.

cis-form [99568-90-8]
Synth. by reacting $TiBr_4$ with excess pyrazole.

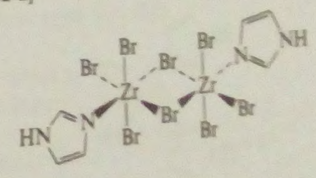
Pazos Perez, M.P. *et al*, *An. Quim., Ser. B*, 1985, **81**, 7 (*synth, ir, raman*)

$C_6H_8Br_8N_4Zr_2$ IC-005003

Di-μ-bromohexabromobis(1*H*-imidazole-N^3) dizirconium(*IV*), 11CI

Tetrabromo(1H-imidazole-N^3*)zirconium*(IV) *dimer. Zirconium*(IV) *bromide imidazole dimer. Zirconium tetrabromide imidazole dimer*

[101307-02-2]



M 957.8

Bi-octahedral. Synth. by mixing solns. of imidazole and $ZrBr_4$. White solid. Insol. MeCN.

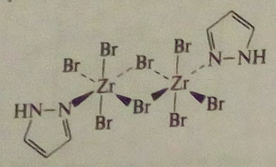
Garcia-Fernandez, M.E. *et al*, *Acta Cient. Compostelana*, 1985, **22**, 197; *CA*, **104**, 160908w (*synth, ir, raman*)

$C_6H_8Br_8N_4Zr_2$ IC-005004

Di-μ-bromohexabromobis(1*H*-pyrazole-N^2)dizirconium(*IV*), 11CI

Tetrabromo(1H-pyrazole-N²)zirconium dimer. Zirconium(IV) bromide pyrazole dimer. Zirconium tetrabromide pyrazole dimer

[99577-65-8]



M 957.8

Synth. by direct reaction of pyrazole with $ZrBr_4$. The monomer *cis*-$ZrBr_4L_2$ may also be synth.

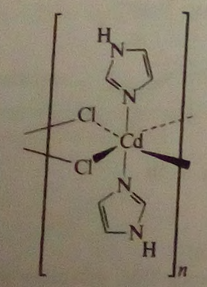
Pazos-Perez, M.P. *et al, An. Quim., Ser. B*, 1985, **81**, 7; *CA*, **104**, 13994t (*synth, ir, raman*)

$C_6H_8CdCl_2N_4$ IC-005005

Dichlorobis(1*H*-imidazole-N^3)cadmium(*II*)

Bis(1H-imidazole-N³)cadmium dichloride. Cadmium(II) chloride bis(imidazole)

[41733-40-8]



M 319.4

Polymeric with approx. octahedral Cd. Colourless cryst. (H_2O).

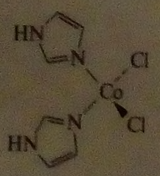
Flook, R.J. *et al, Acta Crystallogr., Sect. B*, 1973, **29**, 903 (*synth, cryst struct*)

Ashby, C.I.H. *et al, J. Am. Chem. Soc.*, 1978, **100**, 6057 (*N-14 nqr*)

$C_6H_8Cl_2CoN_4$ IC-005006

Dichlorobis(1*H*-imidazole-N^3)cobalt(*II*), 9CI

[12317-30-5]



M 265.9

Tetrahedral. Blue cryst.

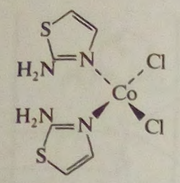
Antti, C.J. *et al, Acta Chem. Scand., Ser. A*, 1972, **26**, 3995 (*synth, cryst struct*)

$C_6H_8Cl_2CoN_4S_2$ IC-005007

Bis(2-aminothiazole)dichlorocobalt(*II*)

Dichlorobis(2-thiazolamine-N³)cobalt(II), 9CI

[38840-69-6]



M 330.1

Tetrahedral around Co. Blue cryst. Paramagnetic.

Duff, E.J. *et al, Inorg. Chim. Acta*, 1972, **6**, 408 (*synth, uv, magnetism*)

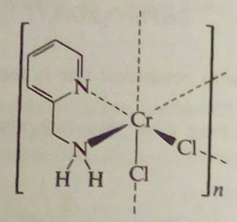
Raper, E.S. *et al, Acta Crystallogr., Sect. B*, 1981, **37**, 928 (*cryst struct*)

$C_6H_8Cl_2CrN_2$ IC-005008

[2-(Aminomethyl)pyridine]dichlorochromium(*II*), 8CI

Dichloro(2-picolylamine)chromium(II)

[27435-75-2]



M 231.0

Chloride-bridged polymer giving octahedral coordination. Synth. from ligand + $CrCl_3.4H_2O$ in EtOH. Light green air-sensitive solid. Sol. DMF dec. Antiferromagnetic complex: μ_{eff} = 4.45 (300K); 3.70μ_B (90K).

Earnshaw, A. *et al, J. Chem. Soc. A*, 1970, 1840 (*synth, magnetism, uv*)

$C_6H_8Cl_2CrN_4$ IC-005009

Dichlorobis(1*H*-pyrazole-N^2)chromium(*II*), 9CI

[58465-92-2]

$CrCl_2(C_3H_4N_2)_2$

M 259.0

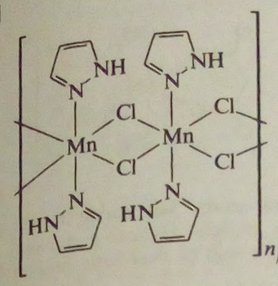
Chloride-bridged polymer with distorted octahedral coordination. Synth. from excess $CrCl_2$ + ligand in EtOH. Air sensitive solid. Sol. DMF; insol. other common org. solvs. μ_{eff} = 4.62 (298K); 4.06μ_B (84K).

Mani, F. *et al, Inorg. Chim. Acta*, 1976, **16**, 163 (*synth, props*)

$C_6H_8Cl_2MnN_4$ IC-005010

Dichlorobis(1*H*-pyrazole-N^2)manganese(*II*), 9CI

[39297-36-4]



M 261.9

Polymeric chain struct. with octahedral Mn. Synth. from hydrated $MnCl_2$ and pyrazole in EtOH. Air-stable, pale pink cryst. Mp > 300°. Paramagnetic, T_N < 1.3K. Magnetic behaviour similar to $MnCl_2py_2$. ΔH_f −63.6kJ mol^{-1}.

Gorder, S. *et al, Acta Crystallogr., Sect. B*, 1970, **30**, 1867 (*cryst struct*)

Witteveen, H.T. *et al, J. Inorg. Nucl. Chem.*, 1974, **36**, 1535 (*synth, magnetism, esr*)

$C_6H_8Cl_2N_4Ni$ IC-005011

Dichlorobis(1*H*-imidazole-N^3)nickel(*II*), 9CI

[54192-72-2]

M 265.7

***trans*-form** [28678-63-9]

Polymeric. Yellow-green solid. Mp > 300°. Paramagnetic.

[54192-76-6]

Taylor, C.E. *et al, J. Chem. Soc. A*, 1969, 368 (*synth, ir*)

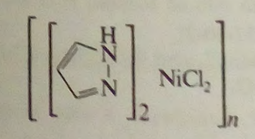
Jansen, J.C. *et al, Z. Naturforsch., B*, 1974, **29**, 527 (*synth, ir*)

Van Dam, J.C. *et al, J. Inorg. Nucl. Chem.*, 1975, **37**, 713 (*thermochem*)

$C_6H_8Cl_2N_4Ni$ IC-005012

Dichlorobis(1*H*-pyrazole-N^2)nickel(*II*), 9CI

[32592-87-3]



M 265.7

Exists as polymer. Yellow-green cryst. Insol. org. solvs.

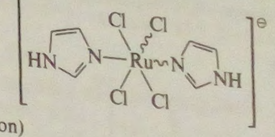
[52242-47-4]

Nicholls, D. *et al, J. Inorg. Nucl. Chem.*, 1970, **32**, 3871 (*synth*)

Witteveen, H.T. *et al, J. Inorg. Nucl. Chem.*, 1975, **37**, 913 (*synth, magnetism*)

$C_6H_8Cl_4N_4Ru^{\ominus}$ IC-005013

Tetrachlorobis(1*H*-imidazole-N^3)ruthenate(*III*)(1−), 9CI



M 379.0 (ion)

Config. at Ru not reported. Prepd. by treating $RuCl_3.xH_2O$ in HCl with imidazole.

Imidazolium salt: Orange-yellow cryst.

Králík, F. *et al, Collect. Czech. Chem. Commun.*, 1961, **26**, 1298.

$C_6H_8Cl_4N_4Zr$ IC-005014

Tetrachlorobis(1*H*-pyrazole-N^2)zirconium(*IV*), 11CI

Zirconium(IV) chloride bis(pyrazole)

As Tetrabromobis(1*H*-pyrazole-N^2)zirconium(*IV*), IC-005002 with

X = Cl

M 369.1

Octahedral.

***cis*-form** [99568-89-5]

Synth. from $TiCl_4$ and excess pyrazole.

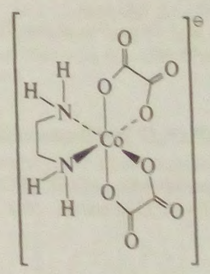
Pazos Perez, M.P. *et al, An. Quim., Ser. B*, 1985, **81**, 7 (*synth, ir, raman*)

$C_6H_8CoN_2O_8^{\ominus}$ IC-005015

Ethylenediaminebis(oxalato)cobaltate(*III*)(1−)

(1,2-Ethanediamine-N,N')bis[ethanedioato(2−)-O,O']cobaltate(III)(1−), 9CI

[23603-95-4]



M 295.0 (ion)

(+)-*form* [20673-37-4]

Na salt: [33516-79-9].

Red-violet cryst. Sol. H_2O.

(−)-*form*

Na salt: [33516-80-2].

Red-violet cryst. Sol. H_2O.

Dwyer, F.P. *et al, J. Am. Chem. Soc.*, 1961, **83**, 1285 (*synth*)

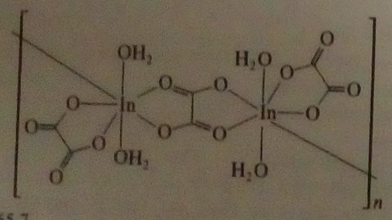
μ-(Oxalato-O^1,O^2:O^1,O^2)bis[diaqua(oxalato-$O^1;O^2$)indium]

Tetraaqua[μ-[ethanedioato(2−)-O,O‴:O,O‴]]bis[ethanedioato(2−)-O,O′]diindium, 11CI

[84948-84-5]



M 565.7

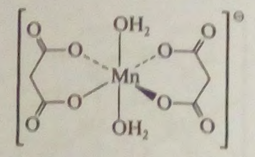
Approx. pentagonal bipyramidal at In with fifth equatorial position occupied by carbonyl O from a neighbouring dimer forming chain struct. White needles + $2H_2O$ (H_2O).

Bulc, N. *et al, Acta Crystallogr., Sect. C*, 1983, **39**, 174 (*synth, cryst struct*)

$C_6H_8MnO_{10}^{\ominus}$ IC-005018

Diaquabis[propanedioato(2−)-*O,O′*]manganate(*III*)(1−)

Diaquabis(malonato)manganate(III)(*1*−)



M 295.0 (ion)

trans-Octahedral anion. Salts stable toward air in solid state; dec by uv light. Hydrol. in aq. soln. to Mn(*III*) unless malonic acid or malonates present. Dec. on heating.

K salt: Now known to be K salt of Methanolbis[propanedioato(2−)-*O,O′*]manganate(*III*)(1−), IC-005721.

K salt, dihydrate: [63313-02-0].
Synth. by addition of a soln. of malonic acid, neutralised with K_2CO_3 to a soln. of Mn(*III*) synth. from $MnSO_4$ and $KMnO_4$. Green cryst.; dimorphic. High spin Mn(*III*) d^4 complex; μ_{eff} = 4.91μ_B (300K).

Cs salt: Obt. by metathesis of corresp. H compd. with Cs_2SO_4. Green solid. μ_{eff} = 5.03μ_B (300K), 5.04μ_B (90K). Various other salts also known.

H compd., tetrahydrate: Synth. from $KMnO_4$ in aq. EtOH and malonic acid. Green solid.

[38459-40-4, 63313-02-0]

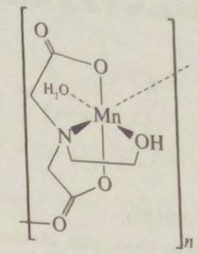
Aqua(β-hydroxyethyliminodiacetato)manganese(*II*) monohydrate
Aqua[N-(*carboxymethyl*)(*2-hydroxyethyl*)*glycinato*(2−)] *manganese, 11CI*
[56404-98-9]



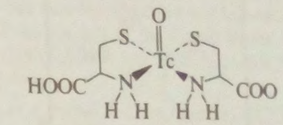
M 248.0
Polymeric chain struct. with one bridging carboxylate group. Pale pink cryst. + $1H_2O$.

Anan'eva, N.N. *et al*, *Koord. Khim.*, 1975, **6**, 850; 1981, **7**, 1556 (*synth, cryst struct*)

IC-005110

$C_6H_{11}N_2O_5S_2Tc$

Bis(cysteinato)oxotechnetium(*V*)



M 354.2
The Tc-cysteine system is not yet fully characterised; the Tc(*V*) complex probably has the struct. shown, perhaps with the $-CO_2^{\ominus}$ group interacting with the Tc as in Bis(3-mercaptovalinato)oxotechnetium(*V*), IC-007034. Similar complexes formed with cysteine ethyl ester, with acetylcysteine, and with ethyl cysteineate dimer. Synth. from $[TcO_4]^{\ominus}$ + cysteine using Sn(*II*) or excess of ligand as reductant, or by ligand exchange with $TcOCl_4^{\ominus}$ or $TcO(gluconate)_2$. Yellow complex, with maximum stability at pH 4. May be reduced to green Tc(*IV*) sp.

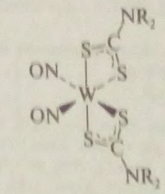
$C_6H_{12}N_4O_2S_4W$ IC-005155

Bis(*N,N*-dimethyldithiocarbamato)dinitrosyltungsten

Bis(dimethylcarbamodithioato-S,S′)dinitrosyltungsten, 11CI, 10CI

[67180-13-6]



R = Me

M 484.3

Monomeric, octahedral complex.

cis-form

Synth. from Dibromodinitrosyltungsten, IC-001846 and excess sodium dimethyldithiocarbamate. Green needles (MeOH). Sol. org. solvs. Mp ⩾ 300°. $Subl._{0.01}$ 150°. Diamagnetic.

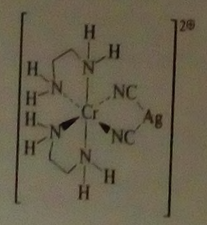
$C_6H_{16}AgCrN_6^{2\oplus}$ IC-005250

Bis(cyano-*N*)bis(1,2-ethanediamine-*N,N'*) silverchromium(2+)



M 332.0 (ion)

cis-form

Linkage isomer of *cis*-$[Cr(CN)_2(en)_2]^{\oplus}$ formed through interaction with $Ag^{\oplus}$ (see also Bis[dicyanosilver(*I*)-*N*]bis(ethylenediamine)chromium(*III*), IC-006053). Precipitation of AgI regenerates uv spectrum of *cis*-$[Cr(CN)_2(en)_2]^{\oplus}$.

Diperchlorate: [75047-20-0].

Synth. from $AgNO_3$ and *cis*-$[Cr(CN)_2(en)_2]ClO_4$ followed by $NaClO_4$. Yellow orange solid.

Heatherington, A. *et al, Inorg. Chim. Acta*, 1980, **44**, L279 (*synth, uv, ir*)

$C_6H_{16}AlNaO_4$ IC-005251

Sodium dihydrobis(2-methoxyethanolato-*O,O'*) aluminate(1−)

Sodium bis(2-methoxyethoxy)aluminium hydride. RED-Al. SDMA. Vitride. Synhydride

[22722-98-1]

$NaAlH_2(OCH_2CH_2OMe)_2$

M 202.1
Oligomeric structs. proposed in soln. Widely used as reducing agent in org. chem. Viscous moisture sensitive liq. Used as 70% soln. in toluene. Sol. hydrocarbons, ethers. ΔH_f −1316 kJ mol^{-1}.

Walker, E.R.H., *Chem. Soc. Rev.*, 1976, **5**, 23 (*use*)
Inorg. Synth., 1978, **18**, 149 (*synth*)
Štrouf, O. *et al, J. Organomet. Chem. Libr.*, 1985, **150** (*rev, props, use*)

$C_6H_{16}AlO_2^{\ominus}$ IC-005252

Dihydrodiisopropoxyaluminate(1−)

Dihydrobis(2-propanolato)aluminate(1−)

$[AlH_2[OCH(CH_3)_2]_2]^{\ominus}$

M 147.1 (ion)
Detected in soln. by nmr as Me_4N salt.

Li salt: [70556-31-9].
Shown to be a mixt. of $LiAlH_4$ and $LiAl[OCH(CH_3)_2]_4$.

Turova, N.Ya. *et al, Zh. Obshch. Khim.*, 1977, **47**, 1338; *Inorg. Chim. Acta*, 1977, **21**, 157 (*synth, powder struct*)
Heřmánek, S. *et al, Z. Naturforsch., B*, 1987, **42**, 539 (*Al-27 nmr*)

$C_6H_{16}AlO_3^{\ominus}$ IC-005253

Triethoxyhydroaluminate(1−)

$[AlH(OEt)_3]^{\ominus}$

M 163.1 (ion)

Li salt: [17250-30-5].
Synth. from $LiAlH_4$ and 3EtOH in Et_2O. Selective reducing agent. White moisture-sensitive solid. May be assoc. in soln.

Brown, H.C. *et al, J. Am. Chem. Soc.*, 1964, **86**, 1089 (*synth, use*)

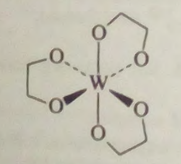
Kopecky, K.R. *et al, Can. J. Chem.*, 1988, **66**, 2234.

$C_6H_{12}O_6W$ IC-005163

Tris[1,2-ethanediolato(2−)-*O,O'*]tungsten(*VI*), 9CI

Tris(ethylene-1,2-dioxo)tungsten(VI)

[54153-67-2]



M 364.0
Octahedral. Interatomic distance: W—O 190.8 pm. Cryst. Forms a monohydrate.

[42592-41-6]

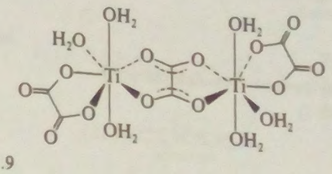
Scherle, J. *et al, Acta Crystallogr., Sect. B*, 1974, **30**, 2772 (*cryst struct*)

$C_6H_{12}O_{18}Ti_2$ IC-005164

Hexaaqua-μ-oxalatobis(oxalato)dititanium(*III*)

μ-Oxalatobis[oxalatotriaquotitanium(III)]. *Hexaaqua[μ-[ethanedioato(2−)-O,O''':O',O'']]bis[ethanedioato(2−)-O,O']dititanium*(III), *10CI*

[24436-22-4]

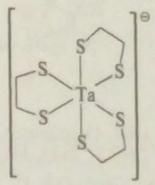


M 467.9
Linked pentagonal bipyramids. Magnetic measurements show significant exchange although the titaniums are well separated. Synth. from $TiCl_3$ and oxalic acid in aq. soln. Brown solid. Sol. H_2O, insol. EtOH. Paramagnetic, $\mu_{eff} = 1.54\mu_B$ (295K). The temp. dependence indicates J = −60 cm^{-1}.

Eve, D.J. *et al, J. Chem. Soc. A*, 1966, 1183 (*synth, ir, uv, magnetism*)
Drew, M.G.B. *et al, J. Chem. Soc., Dalton Trans.*, 1969, 876 (*cryst struct, uv-vis*)
Wrobleski, J.T. *et al, Inorg. Chim. Acta*, 1980, **38**, 227 (*magnetism, uv-vis*)

$C_6H_{12}S_6Ta^{\ominus}$ IC-005165

Tris[1,2-ethanedithiolato(2−)-*S,S'*]tantalate(*V*)(1−), 11CI



M 457.5 (ion)
Prob. like the Nb analogue: a struct. intermediate between octahedral and trigonal prismatic.

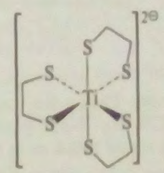
Et_4N salt: [99797-22-5].
Synth. from $TaCl_5$, $LiSCH_2CH_2SLi$ and $[Et_4N]Cl$ in MeCN. Orange solid.

Tatsumi, K. *et al, Angew. Chem., Int. Ed. Engl.*, 1986, **25**, 86 (*synth, ir, uv-vis, pmr*)

$C_6H_{12}S_6Ti^{2\ominus}$ IC-005166

Tris(1,2-ethanedithiolato-*S,S'*)titanate(*IV*)(2−), 11CI

[94750-77-3]



M 324.4 (ion)
Octahedral but distorted towards trigonal prismatic geometry.

Bis-Et_4N salt: [94750-78-4].

Synth. from $Na_2S_2C_2H_4$, $TiCl_4$ and Et_4NCl in MeCN, or from $TiCl_3$, Et_4NBr and $Na_2S_2C_2H_4$ in MeCN. Orange, diamagnetic air-sensitive cryst. Sol. MeCN, Et_2O.

Dorfman, J.R. *et al*, *Inorg. Chem.*, 1985, **24**, 453 (*synth, cryst struct, uv-vis, Et_4N salt*)
Rao, C. *et al*, *Inorg. Chem.*, 1986, **25**, 428 (*synth, struct, uv-vis*)
Mukherjee, R.N. *et al*, *Inorg. Chem.*, 1986, **25**, 2979 (*uv-vis, electrochem*)

IC-005167

$C_6H_{13}AgS$

(3-Methylpentane-3-thiolato)silver(*I*)

[87337-48-2]

$AgSC(CH_3)(CH_2CH_3)_2$

M 225.1
Struct. comprises chains of silver and sulfur atoms. Each chain contains 2 separate and unconnected $(Ag—SR)_\infty$ strands. Colourless cryst. Sol. CCl_4, $CHCl_3$, C_6H_6, toluene, pet. ether, Et_2O, THF,warm EtOH, warm Me_2CO. Mp 145-146°.

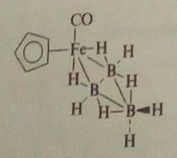
Dance, I.G. *et al*, *Inorg. Chem.*, 1983, **22**, 3785 (*cryst struct, synth, pmr*)

IC-005168

$C_6H_{17}B_3FeO$

Carbonyl(η⁵-2,4-cyclopentadien-1-yl)[octahydrotriborato(1 –)]iron

[53802-00-9]



M 189.4
Dark brown -black solid. Deep purple, air-sensitive soln. in hydrocarbons, CH_2Cl_2, Et_2O, Me_2CO. Mp 53-54°.

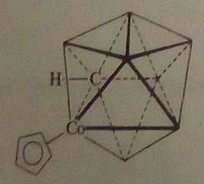
Gaines, D.F. *et al*, *Inorg. Chem.*, 1978, **17**, 794 (*synth, ms, pmr, B-11 nmr, ir*)

IC-005169

$C_6H_{13}B_7Co$

(η⁵-2,4-Cyclopentadien-1-yl)[(3,4,5,6,8-η)-octahydro-4-carbaoctaborato(3 –)]cobalt, 9CI

[38882-81-4]



M 219.7
Proposed struct. shown. Dark green (nearly black) solid. Sol. CH_2Cl_2, MeCN. Mp 79-81°. Paramagnetic. Heat sensitive, must be stored below or at 0°.

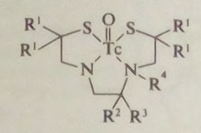
Dustin, D.F. *et al*, *Inorg. Chem.*, 1973, **12**, 1380 (*synth, ir, ms*)

$C_6H_{13}N_2OS_2Tc$

IC-005170

Oxo[1,1′-[1,2-ethanediyl]diimino]bis[ethanedithiolato](3 –)]technetium

Diaminodithiolatooxotechnetium(V).
Bisaminoethanethiol—Tc. DADT—Tc. BAT—Tc



$R^1 = R^2 = R^3 = R^4 = H$

M 292.2
Simplest form of important series of potential pharmaceuticals with $TcO(S_2N_2)$ core. R_1 and R_2 generally H or Me, but can also be Et, cyclohexyl, etc.; R_3 = H, Me, CH_2OH, CH_2NH_2, C_6H_4OH, C_6H_4OMe, various piperidine derivatives; R_4 generally H.

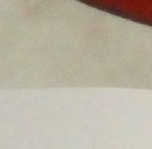
Kung, H.F. *et al*, *J. Nucl. Med.*, 1984, **25**, 16, 128, 326 (*analogues, synth, partition coeff, biodistrib, hplc, electrophoresis*)
Baidoo, K.E. *et al*, *J. Nucl. Med.*, 1987, **28**, 729 (*analogues, partition coeff*)
Scheffel, U. *et al*, *J. Nucl. Med.*, 1988, **29**, 73 (*analogues, synth, lipophilicity*)

$C_6H_{14}As_2Cl_2Ni$

IC-005171

Dichloro[1,2-ethenediylbis[dimethylarsine]-*As,As′*]nickel(*II*)

Dichloro[vinylenebis(dimethylarsine)]nickel(II), *8CI*. *[1,2-Bis(dimethylarsino)ethene]dichloronickel*(II)



cis-form

M 365.6
cis-ligand gives planar monomer; *trans*- gives octahedral polymer with coordinated EtOH. Complexes with other anions and $[ML_2]^{2\oplus}$ also formed.

cis*$_{ligand}$-*form
Pale brown solid. Sol. polar org. solvs.

trans*$_{ligand}$-*form
Forms as 2EtOH complex.

Bis-EtOH complex: catena-*Dichlorobis(ethanol)[1,2-ethenediylbis[dimethylarsine]]nickel*
$C_{10}H_{26}As_2Cl_2NiO_2$ M 457.7
Green cryst. Sol. polar solvs. Paramagnetic.

Bennett, M.A. *et al*, *J. Chem. Soc. A*, 1971, 536 (*synth, ir, magnetism*)

$C_6H_{14}BBr_3S$

IC-005172

Tribromo(dipropyl sulfide)boron

Tribromo[1,1′-thiobis[propane]]boron, 10CI. Tribromoborane compd. with 1,1′-thiobis[propane] (*1:1*). *Boron tribromide dipropyl sulfide. Tribromoborane dipropyl sulfide*

[61552-15-6]

$(H_3CCH_2CH_2)_2S—BBr_3$

M 368.7

Romm, I.P. *et al*, *Zh. Obshch. Khim.*, 1976, **46**, 2445.

Gol'dshtein, I.P. *et al*, *Dokl. Akad. Nauk SSSR, Ser. Khim.*, 1977, **237**, 1392.

$C_6H_{14}BiCl_2O_2PS_2$

1,1-Dichloro-5-methyl-3-(1-methylethoxy)-4-oxa-2-thia-3-phospha-1-bismahexane 3-sulfide, 11CI

Dichloro[(diisopropoxyphosphinothioyl)thio]bismuthine. S-Dichlorobismuthino-O,O-diisopropylphosphorodithioate

[89928-32-5]

$[(H_3C)_2CHO]_2P(S)SBiCl_2$

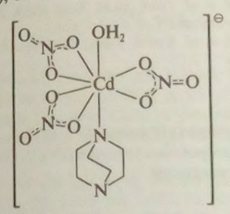
M 493.1
Yellow cryst. Mp 138°.

Chauhan, H.P.S. *et al*, *Phosphorus Sulfur*, 1983, **17**, 161.

IC-005175

$C_6H_{14}CdN_5O_{10}^{\ominus}$

Aqua(1,4-diazabicyclo[2.2.2]octane-*N*)tris(nitrato-*O,O′*)cadmate(1 –), 11CI



M 428.6 (ion)
Hexagonal bipyramidal anion.

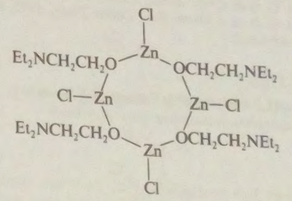
H compd.: [89230-26-2]. *Aqua(4-aza-1-azoniabicyclo[2.2.2]octane)trinitratocadmium*
Cryst. (aq. MeOH). Sol. H_2O.

Viossat, B. *et al*, *Acta Crystallogr., Sect. C*, 1984, **40**, 24 (*synth, cryst struct*)

$C_6H_{14}ClNOZn$

IC-005176

Chloro[2-(diethylamino)ethanolato]zinc



tetramer

M 217.0
Tetrameric. Analogous bromo compd. also prepd.
Tetramer: [55428-26-7]. *Tetrachlorotetrakis[μ-[2-(diethylamino)ethanolato-N,O:O]]tetrazinc, 9CI*
$C_{24}H_{56}Cl_4N_4O_4Zn_4$ M 868.1
Cryst. (EtOH).

Haase, W. *et al*, *Acta Crystallogr., Sect. B*, 1975, **31**, 1184 (*synth, cryst struct*)

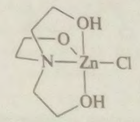
$C_6H_{14}ClNO_3Zn$

IC-005177

Chloro[[2,2′,2″-nitrilotris[ethanolato]](1 –)-*N,O,O′,O″*]zinc, 9CI

Chloro[tris(ethanol)aminato]zinc

[33520-38-6]



M 249.0
Mod. air-stable, hygroscopic white cryst. (EtOH). Sl. sol. alcohols. Mp 232-236°. Hydrol. in aq. soln.

Garelli, F. *et al*, *Gazz. Chim. Ital.*, 1933, **63**, 570 (*synth*)
Hieber, W. *et al*, *Z. Anorg. Allg. Chem.*, 1934, **219**, 225 (*synth*)

IC-005178

$C_6H_{14}ClN_2O_5Re$

Chlorobis(*N,N*-dimethylformamide-*O*)trioxorhenium(*VII*)

Rhenium chloride trioxide bis(dimethylformamide)

[19584-29-3]

$ReO_3Cl(HCONMe_2)_2$

M 415.8
Synth. e.g. from ReO_3Cl and DMF. Yellow, hygroscopic cryst. Sol. CH_2Cl_2, DMF, $CHCl_3$, EtOH; insol. Et_2O, C_6H_6, CCl_4. Dec. at 140°.

Ringel, C. *et al*, *Z. Anorg. Allg. Chem.*, 1967, **353**, 158 (*synth, ir, props*)
Gerlach, U. *et al*, *Z. Chem.*, 1977, **17**, 305 (*synth, ir*)

IC-005179

$C_6H_{14}Cl_2HgN_2O_2S_2$

Dichlorobis(*O*-ethyl thiocarbamate)mercury

Dichlorobis(O-ethyl carbamothioate-S)mercury, 9CI

[53140-35-5]

$[EtOC(NH_2)=S]_2HgCl_2$

M 481.8

Hydrogen bonded 3-D network in solid state. Cryst. (Me_2CO/pet. ether). Mp 105-107°.

Bandoli, G. *et al*, *Cryst. Struct. Chem.*, 1974, **3**, 289 (*cryst struct*)

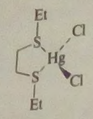
IC-005180

$C_6H_{14}Cl_2HgS_2$

Dichloro[1,2-bis(ethylthio)ethane-*S,S'*]mercury

[1,2-Bis(ethylthio)ethane]mercury dichloride



M 421.8
Solid. Mp 99-100°.

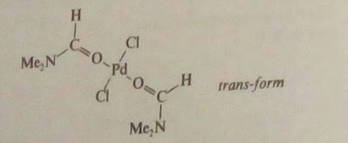
Shostakovskii, M.F., *Izv. Akad. Sci. USSR, Ser. Sci. Khim.*, 1954, 526 (*synth*)
Coates, G.E. *et al*, *J. Chem. Soc.*, 1964, 166 (*synth, ir*)

IC-005181

$C_6H_{14}Cl_2N_2O_2Pd$

Dichlorobis(dimethylformamide)palladium(*II*)

[34730-99-9]



trans-form

M 323.5
Ir indicates O-coordination and *trans*-struct. for only known isomer. Synth. from $PdCl_2$ and DMF. Brown powder, dissoc. in CH_2Cl_2 soln. Insol. CCl_4, Et_2O, isopentane; sol. CH_2Cl_2, 1,2-dichloroethane. Ir ν_{Pd-O} 429 cm^{-1} (nujol).

[20589-35-9, 53649-60-8]

Wayland, B.B. *et al*, *Inorg. Chem.*, 1969, **8**, 971 (*synth, ir*)
Gioria, J.M. *et al*, *Helv. Chim. Acta*, 1971, **54**, 2251 (*synth, props, ir*)

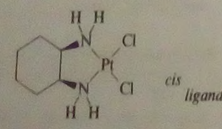
IC-005182

$C_6H_{14}Cl_2N_2Pt$

Dichloro(1,2-cyclohexanediamine-*N,N'*)platinum, 9CI

Dichloro(1,2-diaminocyclohexane)platinum(II)

[52691-24-4]



cis ligand -form

M 380.1
Much investigated for antitumour prop. Useful intermed. for other complexes by reaction with Ag salts. Yellow cryst. Sol. polar solvs.

▷ TP2275974.

cis*-$_{R,R}$-*form [61848-70-2]
meso-*form*
Pale yellow cryst. + ½ H_2O. Sol. DMF. Ir ν_{NH} 3250s, 3195s, 3125s; ν_{PtCl} 325 cm^{-1} (nujol).
▷ TP2275992.

1S-trans*-$_{R,R}$-*form [61848-62-2]
(+)-*form*
Synth. from $PtCl_2(DMSO)_2$ and *S,S*-1,2-diaminocyclohexane. Sol. DMF.

1R-trans*-$_{R,R}$-*form [61848-66-6]
(−)-*form*
Bright yellow solid. Sol. DMF.
▷ TP2275980.

(±)-***trans*-$_{R,R}$-*form*** [38780-40-4]
▷ TP2492220.

[77057-09-1]

IC-005185

$C_6H_{14}Cl_2O_2Ti$

Dichlorodipropoxytitanium(*IV*), 11CI

Dichlorobis(propanolato)titanium(IV). *Titanium*(IV) *dichloride dipropoxide*

[1790-23-4]

$$(H_3CCH_2CH_2O)_2TiCl_2$$

M 236.9

Tetrahedral. Synth. from $TiCl_4$ and $(H_3CCH_2CH_2O)_2SiMe_2$ in hexane. Used widely in olefin polym. catalysts but not for other reactions (cf Dichlorodiisopropoxytitanium(*IV*), IC-005184); component of photosensitive colour-forming solns.

U.S. Pat., 4 173 521, (1969); *CA*, **92**, 155914z (*photosensitive solns*)
Fr. Pat., 2 566 782, (1986); *CA*, **105**, 61079r (*use, polym*)
Ger. Pat., 3 447 297, (1986); *CA*, **105**, 175282g (*synth, use, polym*)

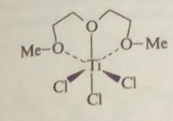
IC-005186

$C_6H_{14}Cl_2O_3Ti$

Trichloro[1,1'-oxybis[2-methoxyethane]-*O,O',O'*]titanium(*III*), 10CI

Trichloro(2,5,8-trioxanonane)titanium(III). *Trichloro(diglyme)titanium*(III). *Titanium*(III) *chloride diglyme*

[69178-49-0]



M 288.4
fac-Octahedral. Synth. by reaction of $TiCl_3$, benzoic acid and benzoic anhydride in diglyme. The product is adventitious and is *not* formed by reaction of $TiCl_3$ and diglyme. V. air and moisture sensitive solid.

Drew, M.G.B. *et al*, *J. Chem. Soc., Dalton Trans.*, 1978, 1176 (*cryst struct, synth*)

IC-005187

$C_6H_{14}Cl_4N_2O_2Ti$

Tetrachlorobis(*N,N*-dimethylformamide-*O*)titanium(*IV*), 11CI

Titanium(IV) *chloride bis(dimethylformamide)*

[12106-37-5]

$$(Me_2NCHO)_2TiCl_4$$

M 335.8
Octahedral. Detailed geometry not known. Synth. by adding DMF to a soln. of $TiCl_4$ in CH_2Cl_2 until precipitation is complete. Used in pre-treatment of poly(acrylonitrile) fibres for carbon fibre manuf. Insol. CH_2Cl_2.

Ger. Pat., 2 016 445, (1971); *CA*, **76**, 114699j (*use*)

IC-005190

$C_6H_{14}FN_2O_5Re$

Bis(*N,N*-dimethylformamide-*O*)fluorotrioxorhenium(*VII*)

Rhenium fluoride trioxide bis(dimethylformamide)

[64539-33-9]

$$ReO_3F(HCONMe_2)_2$$

M 399.3
Synth. from Re_2O_7 and HF in DMF. Yellowish, hygroscopic cryst. Mp 124-139°.

Gerlach, U. *et al*, *Z. Chem.*, 1977, **17**, 306 (*synth, ir, props*)

IC-005191

$C_6H_{14}LiN$

Lithium diisopropylamide

LDA. N-*Lithiodiisopropylamine*. *Diisopropylamine lithium salt*. *Bis(1-methylethyl)aminolithium*. N-(*1-Methylethyl*)-2-*propanamine lithium salt, 9CI*

[4111-54-0]

$$LiN[CH(CH_3)_2]_2$$

M 107.1
V. useful, relatively nonnucleophilic strong base used for generation of carbanions. Can function as single electron donor or as hydride donor. Commercially available as solid or suspended in hexanes (10 wt%). Solid. Sol. ethers, insol. or spar. sol. hydrocarbons. Cleaves ethers rapidly at 0° or above, but solns. in eg. 1:1 THF-cyclohexane are much more stable. Complex with enolate descr.

▷ Pyrophoric; corrosive.

Dimer, complex with enolate of 3,3-dimethyl-5-(dimethyl-tert-butylsilyloxy)pentan-2-one: [110015-47-9]. *Bis*[μ_3-[5-[[(*1,1-dimethylethyl*)*dimethylsilyl*]*oxy*]-*3,3-dimethyl-1-penten-2-olato-*O^1:O^1:O^1,O^3]]*bis*[μ-[N-(*1-methylethyl*)-2-*propanaminato*]]*tetralithium*
$C_{38}H_{82}Li_4N_2O_4Si_2$ M 715.0
Large transparent cryst. (heptane).

Fieser and Fieser's Reagents for Organic Synthesis, Wiley, 1969, **2**, 249; **3**, 184; **4**, 298; **5**, 400; **6**, 334; **7**, 204; **8**, 292; **9**, 280; **10**, 241; **11**, 296 (*uses*)

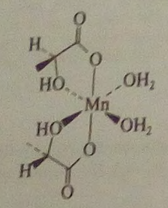
IC-005192

$C_6H_{14}MnO_6$

Diaquabis(2-hydroxypropanoato-O^1,O^2)manganese, 11Cl

Diaquabis(L-lactato)manganese(II)

[18475-79-1]



M 269.1
cis-Octahedral struct. Synth. from $MnCO_3$ and L-lactic acid. Nearly colourless cryst.

Lis, T., *Acta Crystallogr., Sect. B*, 1982, **38**, 937 (*synth, cryst struct*)

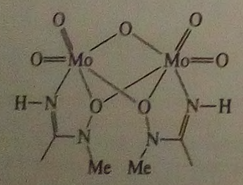
IC-005193

$C_6H_{14}Mo_2N_4O_7$

μ-Oxobis[(*N*-hydroxy-*N*-methylacetamidinato-*N*′,*O*)*cis*-dioxomolybdenum(*VI*)]

Bis[μ-(N-hydroxy-N-methylethanimidamidato-N′,O:O)]-μ-oxotetraoxodimolybdenum(VI), *10Cl*

[79110-78-4]



M 446.0
Air-stable yellow cryst.

Wieghardt, K. *et al, Chem. Ber.*, 1981, **114**, 2700 (*cryst struct, synth, pmr*)

IC-005194

$C_6H_{14}NNa$

Sodium diisopropylamide

N-Sodiodiisopropylamine. Bis(1-methylethyl)aminosodium. N-(1-Methylethyl)-2-propanamine sodium salt, 9CI

[72316-19-9]

$NaN[CH(CH_3)_2]_2$

M 123.1
Solid. Almost insol. C_6H_6.

Lochmann, L. *et al, J. Organomet. Chem.*, 1979, **179**, 123 (*synth, props, ir*)

IC-005195

$C_6H_{14}NO_3Re$

(Diisopropylamino)trioxorhenium(*VII*)

[N-(1-Methylethyl)-2-propanaminato]trioxorhenium, 11Cl

[95544-44-8]

$[(H_3C)_2CH]_2NReO_3$

M 334.3
Synth. from ReO_3Cl and diisopropylamine in hydrocarbon solvs. Pale yellow crystalline solid, volatile, moisture sensitive and thermally unstable at r.t. V. sol. many org. solvs. Mp ~30°. $\nu_{Re=O}$ 989, 950 cm^{-1}.

Edwards, P. *et al, J. Chem. Soc., Dalton Trans.*, 1984, 2695 (*synth, ir, nmr, struct, props*)

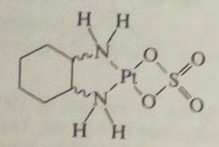
IC-005196

$C_6H_{14}N_2O_4PtS$

(Cyclohexane-1,2-diamine)sulfatoplatinum(*II*), 10Cl

(1,2-Diaminocyclohexane)sulfatoplatinum(II)

[61593-75-7]



M 405.3
Configuration confers chirality. Synth. from Tetrachloroplatinate(*II*)(2−), IC-017117 + $C_6H_{10}(NH_2)_2$, Ag_2SO_4. One of many $C_6H_{10}(NH_2)_2$-Pt(*II*) complexes studied for antitumour properties. Appearance not descr.

[62011-40-9, 66900-70-7, 66900-71-8]

Meischen, S.J. *et al, J. Natl. Cancer Inst. (U.S.)*, 1976, **57**, 841.
